1. QUICK REFERENCE UPON SERVICE VISIT

PDP-427XDA, XG Quick Reference upon Service Visit ① Notes, PD/SD diagnosis, and methods for various settings

Notes when visiting for service

1. Notes when disassembling/reassembling

① Rear case

When reassembling the rear case, the screws must be tightened in a specific order. Be careful not to tighten them in the wrong order forcibly. For details, see "Rear Case" in "6. DISASSEMBLY" on ARP3391.

② Attaching screws for the HDMI connector

When attaching the HDMI connector after replacing the Main Assy, secure the HDMI connector manually with a screwdriver, but not with an electric screwdriver. If you tighten the screws too tightly with an electric screwdriver, the screw heads may be damaged, in which case the screws cannot be untightened/tightened any more.

2. On parts replacement

① How to discharge before replacing the Assys

A charge of significant voltage remains in the Plasma Panel even after the power is turned off. Safely discharge the panel before replacement of parts, in either manner indicated below:

A: Let the panel sit at least for 3 minutes after the power is turned off.
B: Turn the Large Signal System off before the power is turned off then, after 1 minute, turn the power off.

For details, see "10.3 Power ON/OFF Function for the Large-Signal System" on ARP3391.

② On the settings after replacement of the Assys

Some boards need settings made after replacement of the Assys. For details, see "7. ADJUSTMENT" on ARP3391.

3. On various settings

① SR+

After a repair using a PC, be sure to restore the setting for the RS-232C connector to SR+.

② Setting in Factory mode

After a Mask indication into the panel is performed, be sure to set the Mask setting to "OFF" then exit Factory mode.

PD/SD		Change of settings	
Item	No. of LEDs flashing	How to enter Factory mode using the supplied remote control unit	
		Red	Blue
Panel section	Communication with the panel drive IC		Blue 1
	Communication with the module IIC		Blue 2
	DIGITAL-RST2		Blue 3
	Panel high temperature		Blue 4
Main section	Audio		Blue 5
	Communication with the Module microcomputer		Blue 6

	Main IIC communication		Blue 8
	Communication with the Main microcomputer		Blue 9
	FAN		Blue 10
	Unit high temperature		Blue 11
	No corresponding item		Blue 12
	MTB-RST2/RST4		Blue 13
POWER		Red 2	
SCAN		Red 3	
SCN-5V		Red 4	
Y-DRIVE		Red 5	
Y-DCDC		Red 6	
Y-SUS		Red 7	
ADRS		Red 8	
X-DRIVE		Red 9	
X-DCDC		Red 10	
X-SUS		Red 11	
UNKNOWN		Red 15	

Change of settings	
How to enter Factory mode using the supplied remote control unit	
In the same way as with the remote control unit supplied with the 6th-generation model	
How to enter Integrator mode using the supplied remote control unit	
① Enter the Standby mode. ② Press [MENU]. ③ Press [TV ⓪].	
How to switch UART ① (Integrator)	
① Enter the Integrator mode. ② Display "OFF" using [➡]. ③ Change the communication speed using [⏏], then [➡].	
How to switch UART ② (During Standby)	
① Enter the Standby mode. ② Hold [VOL +] or [VOL -] pressed for 3 seconds. ③ Hold [SPLIT] pressed for 3 seconds. ④-1 To set to 232C, press [ENTER]. ⑤-2 To set to SR+, press [HOME MENU].	
Note: If switching is completed successfully, the red LED will flash twice. Note 1: Use a remote control unit supplied with the 6th-generation models or later. Note 2: Do not hold a key pressed for more than 5 seconds.	

How to locate several items on the Factory menu

{ } : Item on the Factory menu
[] : Key on the remote control unit
" " : Screen indication

1. Confirmation of accumulated power-on time and power-on count

Select {INFORMATION} then {HOUR METER}.
(After entering Factory mode, press [⏏] four times.)

2. Confirmation of the Power-down and Shutdown histories

① Panel system

PD: Select {PANEL FACTORY} then {POWER DOWN}.
(After entering Factory mode, press [MUTING] once, press [ENTER], then press [⏏] three times.)

SD: Select {PANEL FACTORY} then {SHUT DOWN}.
(After entering Factory mode, press [MUTING] once, press [ENTER], then press [⏏] four times.)

② Main Assy

Select {INFORMATION} then {MAIN NG}.
(After entering Factory mode, press [⏏] once.)

3. How to display the Mask indication

① Mask indication in the panel side

1. Select {PANEL FACTORY} then {RASTER MASK SETUP}.
(After entering Factory mode, press [MUTING] once, press [ENTER], then press [⏏] 8 times.)

2. Press [ENTER], then select a Mask indication, using [⏏] or [⏏].

② Mask (SG screen) indication in the Main Assy (MAIN VDEC)

1. Select either Input 1, 2 or 4, to which no signal is input (black screen).
2. Select {INITIALIZE} then {SG MODE}. Press [⏏]. (After entering Factory mode, press [MUTING] three, then press [⏏] once.)
Then, the indication at the lower right of the screen changes from "OFF" to "ANA AD YCBGR".

3. You can change Mask patterns by pressing [⏏] to select {SG PATTERN} then using [⏏] or [⏏].

Note: When you switch "SG MODE" routes, some displays become monochrome, as they are in Y-signal only mode.

Adjustments and Settings after replacement of the Assys (Procedures in Factory mode)

1. Digital Video Assy: Transfer of backup data

- ① Select {PANEL FACTORY}, {ETC}, then {BACKUP DATA}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [⏏] seven times, then press [ENTER].)
- ② Select {TRANSFER}, using [➡], then hold [ENTER] pressed for at least 5 seconds.
- ③ After transfer of backup data is completed, {ETC} is automatically selected, and the LED on the front panel returns to normal lighting.

2. MAIN Assy : Switching to SR+ from RS-232C

- ① Enter the Integrator mode. (The way is described above.)
- ② As SR+ <=> is [OFF] state, switch to [ON] state by using [➡].
- ③ Turn the POWER switch of the main unit off by the remote control.

3. POWER SUPPLY Unit: Clearance of the accumulated power-on count and maximum temperature value

- ① Select {PANEL FACTORY}, {ETC}, then {P COUNT INFO}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [⏏] seven times, press [ENTER], then press [⏏] six times.)
- ② Press [➡] to select "CLEAR". Hold [ENTER] pressed for at least 5 seconds. After clearance is completed, "ETC" is automatically selected. Clear the maximum temperature value (MAX TEMP) in the same manner.

4. Other Assys: Clearance of the maximum temperature value

- ① Select {PANEL FACTORY}, {ETC}, then {MAX TEMP}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [⏏] seven times, press [ENTER], then press [⏏] seven times.)
- ② Press [➡] to select "CLEAR". Hold [ENTER] pressed for at least 5 seconds. After clearance is completed, "ETC" is automatically selected.

PDP-427XDA, XG Quick Reference upon Service Visit ②

Mode transition and structure of layers in Service Factory mode

Mode transition in Service Factory mode

- To shift to another mode, press [MUTING].
- To shift to another item in a specific mode, press [↑] or [↓].
- To shift to the next nested layer below for an item with a "(+)" indication, press [ENTER]. To return to the next nested layer above, also press [ENTER].

Items for use by engineers

For transferring backup data (after replacement of the DIGITAL Assy)
To clear data of the digital video

For clearance of data for the corresponding items.
The clearing method is the same: Select "CLEAR", using [→], then hold [SET] pressed for at least 5 seconds. After clearance is completed, {ETC} is automatically selected.

For use while Raster Mask (full mask) is displayed.
Use [↑] or [↓] to select the type of mask.

For use while Pattern Mask is displayed. Use [↑] or [↓] to select the type of mask.

For use while Combination Mask is displayed.
Use [↑] or [↓] to select the type of mask.

2. CONTRAST OF MISCELLANEOUS PARTS

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

● The Δ mark found on some component parts indicates the importance of the safety factor of the part.

Therefore, when replacing, be sure to use parts of identical designation.

● Screws adjacent to ∇ mark on product are used for disassembly.

● Reference Nos. indicate the pages and Nos. in the service manual for the base model.

● For the applying amount of lubricants or glue, follow the instructions in this manual.

(In the case of no amount instructions, apply as you think it appropriate.)

● When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω \rightarrow 56×10^1 \rightarrow 561 RD1/4PU $\begin{bmatrix} 5 & 6 & 1 \end{bmatrix}$ J

47k Ω \rightarrow 47×10^3 \rightarrow 473 RD1/4PU $\begin{bmatrix} 4 & 7 & 3 \end{bmatrix}$ J

0.5 Ω \rightarrow R50 RN2H $\begin{bmatrix} R & 5 & 0 \end{bmatrix}$ K

1 Ω \rightarrow 1R0 RSIP $\begin{bmatrix} 1 & R & 0 \end{bmatrix}$ K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω \rightarrow 562×10^1 \rightarrow 5621 RN1/4PC $\begin{bmatrix} 5 & 6 & 2 & 1 \end{bmatrix}$ F

5. ADJUSTMENT

1. At shipment, the unit is adjusted to its best conditions. Normally, it is not necessary to readjust even if an assembly is replaced. If the adjustment is shifted or if it becomes necessary to readjust because of part replacement, etc., perform the adjustment as described below.
2. Any value changed in Service/Factory mode will be stored in memory as soon as it is changed. Before readjustment, take note of the original values for reference in case you need to restore the original settings.
3. Use a stable AC power supply.

5.1 ADJUSTMENT REQUIRED WHEN THE SET IS REPAIRED OR REPLACED

■ When any of the following assemblies is replaced

POWER SUPPLY Unit	➡	Refer to "7.4 HOW TO CLEAR HISTORY DATA". on ARP3391 (PDP-427XD)
DIGITAL Assy	➡	Writing of backup data is required. Refer to the "7.3 BACKUP WHEN THE PANEL UNIT IS ADJUSTED." on ARP3391 (PDP-427XD)
X MAIN DRIVE Assy	➡	No adjustment required
X SUB DRIVE Assy	➡	No adjustment required
Y MAIN DRIVE Assy	➡	No adjustment required
Y SUB DRIVE Assy	➡	No adjustment required
Service Panel Assy	➡	Refer to "5.3 ADJUSTMENTS WHEN THE SERVICE PANEL ASSY IS REPLACED."
MAIN Assy	➡	Switching to SR+ from RS-232C
SENSOR Assy	➡	Writing of backup data is required. Refer to the "7.3 BACKUP WHEN THE PANEL UNIT IS ADJUSTED." on ARP3391 (PDP-427XD)
TANSHI Assy	➡	No adjustment required

5.2 ADJUSTMENT REQUIRED WHEN PART IS REPLACED

Notes on replacing parts

For the parts described in the list below, replacement is required for the whole Assy, not only the defective part. If any part listed below is identified as defective and needs replacement, replace the whole Assy, and make necessary adjustments after replacement.

Reason: The whole Assy must be replaced, because adjustments and data rewriting for the Assy at the level of production line are required.

PCB Assy No.	Function Name	Parts that Require Whole-Assy Replacement		
		Ref No.	Function Name	Part No.
AWW1193	42 DIGITAL Assy	IC3151	Module microcomputer	AGC1011
		IC3401	Sequence IC	PEG239A
		IC3301	Flash memory	AGC1024
		IC3156	EEPROM	BR24L04FJ-W
AWW1140	SENSOR Assy	IC3652	EEPROM	BR24L02FJ-W
AWV2322	MAIN Assy	IC4603	Flash ROM	AGC1020
		IC4701	AV switch	R2S11002AFT
		IC4901	RGB switch	R2S11001FT
		IC5101	MAIN VDEC	UPD64015GM-UEU
		IC5103	SUB VDEC	TVP5150AM1PBS
		IC5301	A/D Converter	AD9985KSTZ-110
		IC5403	EEPROM	BR24L02FJ-W
		IC5404	EEPROM	BR24L02FJ-W
		IC8202	Flash ROM	AGC1019
		IC8301	Flash UCOM	AGC1016
		IC8402	Flash ROM	AGC1018

POWER SUPPLY Unit	➡	The assembly must be replaced as a unit, and no part replacement is allowed.
MAIN Assy	➡	No adjustment is required after replacement of parts other than those mentioned above.
DIGITAL Assy	➡	No adjustment is required after replacement of parts other than those mentioned above.
X MAIN DRIVE Assy	➡	No adjustment is required after replacement of parts other than those shown in the following page.
X SUB DRIVE Assy	➡	No adjustment required
Y MAIN DRIVE Assy	➡	No adjustment is required after replacement of parts other than those shown in the following page.
Y SUB DRIVE Assy	➡	No adjustment required
ADDRESS Assy	➡	No adjustment required
SENSOR Assy	➡	No adjustment is required after replacement of parts other than those mentioned above.
TANSHI Assy	➡	No adjustment required

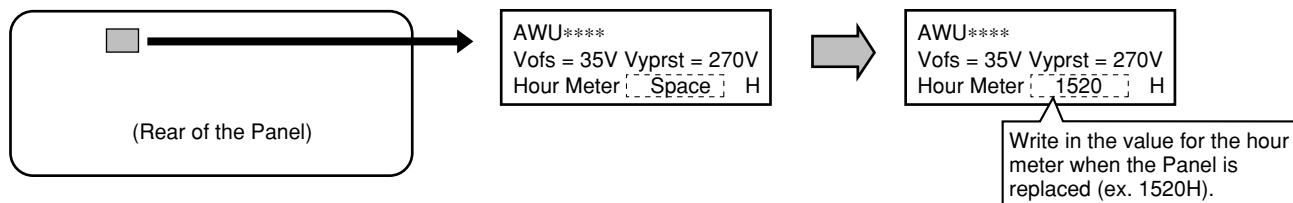

5.3 ADJUSTMENT WHEN THE SERVICE PANEL ASSY IS REPLACED

When the Panel Assy is replaced with one for service, the following adjustments are required:

■ Adjustments of Vofs voltage and Vyprst voltage

Enter the reference adjustment values for the Vofs voltage and Vyprst voltage that are written on the label attached to the panel for service.

Note: Enter the values, using an RS-232C command or the Factory Menu.

Using an RS-232C command

Enter a "PFY" command with Factory mode ON.

Convert the adjustment voltage values written on the label attached at the rear of the Panel to an input command, referring to the conversion chart. (See the next page.)

- Reference adjustment of the Vofs voltage: Ex. "Vofs = 35" → (Check the conversion chart.) Enter "VOF112."
- Reference adjustment of the Vyprst voltage: Ex. "Vyprst = 270 V" → (Check the conversion chart.) Enter "VRP078."

Using the Factory Menu

	1	5	10	15	20	25	30	32
1	PANEL	FACT.	VD1-11601-NTV-EHB7					
			[TBL1/60VS]					
5								
10								
15	PANEL-1	ADJ (+)						
16								

	1	5	10	15	20	25	30	32
1	PANEL	FACT.	VD1-11601-NTV-EHB7					
			[TBL1/60VS]					
5								
10								
15	VOL	RST P	<=>	058				
16								

Select the main item "PANEL FACT." by pressing the MUTE key then enter Panel Factory mode by pressing the SET key.

Using the ▲/▼ keys, select "PANEL-1 ADJ" then press the SET key to enter the next lower nested layer.

Select "VOL-OFFSET" or "VOL RST P" then enter a command value converted from the voltage value, using the ◀/▶ keys.

■ Clearing data on various histories of the Panel, such as those on the hour meter

- It is necessary to clear the data on the hour meter, etc. to match them to the actual driving hours of the Panel.
- It is also necessary to clear the data on SD and PD, because the accumulated power-on time when a shutdown or power-down occurred is recorded.

Note: Clear the values, using an RS-232C command or the Factory Menu.

There are two types of hour meters. Do not take the MTB hour meter for the hour meter.

Using an RS-232C command

To acquire the accumulated power-on time of the product itself, use the "QS2" of RS-232C command.

1. To clear the data on the hour meter (for the Panel) : CHM
2. To clear the data on the pulse meter : CPM
3. To clear the data on the SD history : CSD
4. To clear the data on the PD history : CPD

Using the Factory Menu

See "7.4 HOW TO CLEAR HISTORY DATA."
(Refer to Service manual "ARP3391")

6. RS-232C

6.1 OUTLINE OF RS-232C COMMAND

6.1.1 USING RS-232C COMMANDS

For the PDP-427XG and PDP-427XDA Plasma Displays, the circuitry is structured as shown in the diagram below to support the SR+ system. Controlling with either the SR+ system or RS-232C commands can be selected. As the SR+ system is selected at shipment, to control with RS-232C commands in servicing it is necessary to switch the paths. After servicing, be sure to return the setting to the SR+ system.

Rough diagram of switching between SR+ and RS-232C

How to switch SR+/RS-232C ?

There are "How to switch SR+/RS-232C by remote control in the Standby Mode" and "How to switch SR+/RS-232C by remote control in the INTEGRATOR MENU" as a Method

- ① To select SR+/RS-232C by remote control in Standby Mode.
 - During Standby mode, hold the keys other than the [POWER] key on the remote control, the following operation is done within 10 seconds.
- To select from SR+ to RS-232C/To select from RS-232C to SR+.
 - During standby mode, hold the [VOLUME+ (or -)] key on the remote control unit pressed for 3 to 10 seconds.
 - Then within 3 seconds after the key is released, hold the [2-screen] key released, use the [SET (ENTER)] key on the remote control unit to set to RS-232C (the baud rate last selected is chosen) or the [HOME MENU] key to set to SR+.
 - During IF Standby mode (once 10 seconds or more has passed after the LED goes dark during communication), the first keypress may not be accepted. In such a case, for a key operation, first press any key other than the [POWER] key and [CH] keys, then the desired key.
 - At the switch SR+/RS-232C, the LED will be blinked on the fixed time.
- ② To select SR+/RS-232C in the INTEGRATOR MENU.
 - How to enter INTEGRATOR MENU.
 - During standby mode, press the [Home Menu] key, and then press the [POWER] key within 3 seconds. During factory mode, hold the [INTEGRATOR] key.
 - In INTEGRATOR MENU, there is a OSD where SR+ (or RS-232C) is turned on/off, and it switches on the screen.

6.2 OUTLINE OF EACH COMMAND

6.2.1 QS6

Induce it peculiar, individual information is acquired.

Command Format	Effective Operation Modes	Function	Remarks
[QS6]	Every time	Output of status	

• AU Model

7.2 GENERAL INFORMATION (PDP-427XDA Only)

Display Method of Signal Level, Quality, and BER Information Screen

MANUAL SCAN screen has these information.

Operation : Manual Scan

HOMEMENU => Setup => DTV Setup => Installation => Input Password => Manual Scan

Signal Level

Quality

"Signal Level" and "Quality" are displayed on Manual Scan screen.

These level indicator are laugh standard.

Please use them as reference

BER

While displaying Manual Scan screen, please press the following keys within 5 seconds.

Operation : BER

1. Green Key
2. I-II Key
3. Enter Key

This BER function is effective until turning off power.

Fig : Manual Scan screen

7.3 SPECIFICATION

Specifications

Item			42” Plasma Display, model: PDP-427XDA
Number of pixels			1024 x 768 pixels
Audio amplifier			13 W + 13 W (1 kHz, 10 %, 8 Ω)
Speakers			Woofer: 4.8 cm x 13 cm cone type Tweeter: 2.5 cm semidome type
Surround System			SRS/FOCUS/TruBass
Power Requirements			240 V AC, 50 Hz, 295 W (0.4 W Standby)
Dimensions			1040 mm (W) x 679 mm (H) x 115 mm (D)
Weight			29.7 kg (65.5 lbs.)
Colour System	Analogue		PAL/SECAM/NTSC/4.43 NTSC/PAL-M/PAL-N
	Digital		PAL
TV Function (Analogue)	Receiving System		PAL: B/G, D/K, I SECAM: B/G, D/K NTSC: M/ N
	Tuner	VHF/UHF	44.25 MHz to 863.25 MHz
		CATV	Hyper-band, S1 ch to S41 ch
	Auto Channel Preset		99 ch, Auto Preset
	Audio multiplex		NICAM/A2/BTSC System
TV Function (Digital)	Receiving System		DVB-T (2K/8K COFDM)
	Tuner	VHF/UHF	VHF Band (104.5 MHz to 226.5 MHz) and UHF Band (526.5 MHz to 816.5 MHz)
		Auto Channel Preset	
	STEREO		MPEG layer I/II, Dolby Digital
Terminals	Rear	INPUT 1	COMPONENT VIDEO in, S-VIDEO in, AV in
		INPUT2	COMPONENT VIDEO in, S-VIDEO in, AV in
		INPUT3	S-VIDEO in, AV in, HDMI in
		INPUT4	HDMI in
		PC INPUT	Analogue RGB in, AUDIO (STEREO) in
		CONTROL OUT	1
		MONITOR OUT	AV out
		SUBWOOFER	Variable
		DIGITAL OUT	Digital audio output (Optical)
	Antenna	75 Ω Din Type for VHF/UHF in (Analogue) 75 Ω Din Type for VHF/UHF in (Digital)	
	Side	INPUT 5	S-VIDEO, AV in
PHONESOUTPUT		16 Ω to 32 Ω recommended

8.2.1.4 TEMPERATURE

A present temperature and the FAN rotation are displayed.

If either [←] key or [→] key is pressed, the display data is refreshed.

	1			5				10				15				20				25				30				35				40
1																																
5																																

• Display/Meaning

TEMP1 : The temperature of the sensor on the panel side is displayed by the centigrade.

TEMP2 : The temperature conversion display is done with 10bit the A/D input value of Main uCON 76 pin (AN0). It is displayed by both the centigrade (C) and 8bit A/D value.

(Remark:When temperature (C) of the sensor becomes more than a specified temperature, the shutdown start of processing.)

FAN : The value of the Fan rotating state is displayed.

STOP : stopped, LOW: slow speed, HIGH: high speed.

8.2.1.5 HOUR METER

	1			5				10				15				20				25				30				35				40

• Display/Meaning

Meaning	Item Name	Display Example	Corresponding RS232C Command
HOUR METER (PANEL)	PANEL	00151H 21M	QIP
POWER ON COUNTER	P-COUNT	0000095 TIMES	QIP
SYSTEM SERIAL	SERIAL		QIP

Note 1: The SYSTEM SERIAL displays only FHD. It corresponds by sticking the seal in G7 model.

Note 2: The PANEL-side's HOUR METER/P-COUNT acquires information from the PANEL-side.

8.2.4 INITIALIZE

Operation item

No.	Function	Content	RS232C
1	SYNC DET (+)	Exclusively used for technical analysis.	---
2	SG MODE ⇔	Paired SG_MODE with SG_PATTERN. Select SG Route.	---
3	SG PATTERN ⇔	Paired SG_MODE with SG_PATTERN. Select SG Pattern.	---
4	SIDE MASK LEVEL (+)	Configure the color of the side mask.	BSL, GSL, RSL
5	FINAL SETUP (+)	Initialize flash memorys on virgin product status	FST
6	CVT AUTO ⇔	Exclusively used for technical analysis.	---
7	HDMI INTR POSITION (+)	Exclusively used for technical analysis.	---

8.2.4.1 SYNC DET (+)

Exclusively used for technical analysis (details omitted).

8.2.4.2 SG MODE

SG MODE (SG's route selection) / SG PATTERN (signal pattern selection) are used as pair.

In SG MODE, select the SG route and then select the SG pattern to be sent by the selected route.

In SG MODE, make sure to select the route first.

1	5	10	15	20	25	30	35	40
1	INITIALIZE	AV1-30601-NTV-UHB7						
5								
10								
15	SG MODE <=>	ANA-MVDEC-Y						
16								

Operation item

No.	Display	Content
1	SG OFF	SG Mode is OFF.
2	DIG MVDEC YCBCR	MAIN VDEC: YCbCr (Digital output mode)
3	ANA MVDEC Y	MAIN VDEC: Y (Analog output mode: SG VDEC return setting)
4	ANA SVDEC Y	SUB VDEC:Y
5	ANA AD YCBCR	AD: YcbCr (Analog output to the RGB SW)
6	ANA AD RGB	AD: RGB (Analog output to the RGB SW)

Please confirm "SG generation place" and "Route of the signal" by the block chat.

New DDR routing rules:

All timing is relative the CLK/CLKb that arrive at the destination DDR SDRAM chip.

- 1) X = CLK/CLKb should be a matched differential pair with a length < 4"
- 2) Address and control should be X +/- 0.75" (or 100 ps)
- 3) DQS and DQM should be X +/- 0.75" (or 100 ps)
- 4) All DQs should match corresponding byte lane DQS/DQMs within +/- 0.20" (or 30 ps)
- 5) Place 22 ohm resistors on this page near BCM7038.
- 6) Place 62 ohm resistors for DQ signals midpoint between BCM7038 and DDR SDRAM
- 7) Place DDR_VREF1/2 resistor dividers near BCM7038
- 8) Trace impedances need to be 60 ohms +/- 10% (54-66 ohms)
- 9) Route VREF with 30-mil trace and at least 1 high quality ceramic bypass capacitor for each connection to a device.
- 10) All traces should have a >= 3 to 1 spacing ratio from the reference GND/PWR layer.
(e.g. 15 mil line-to-line spacing for a 5 mil dielectric thickness)

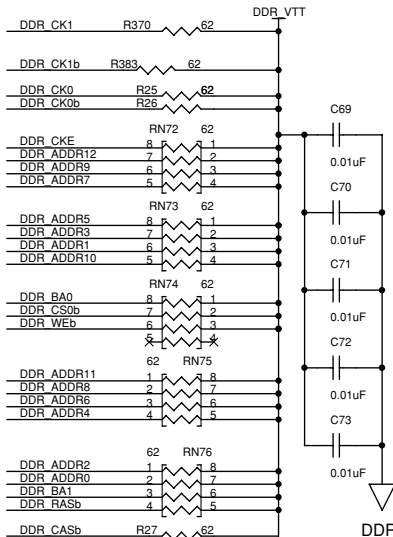

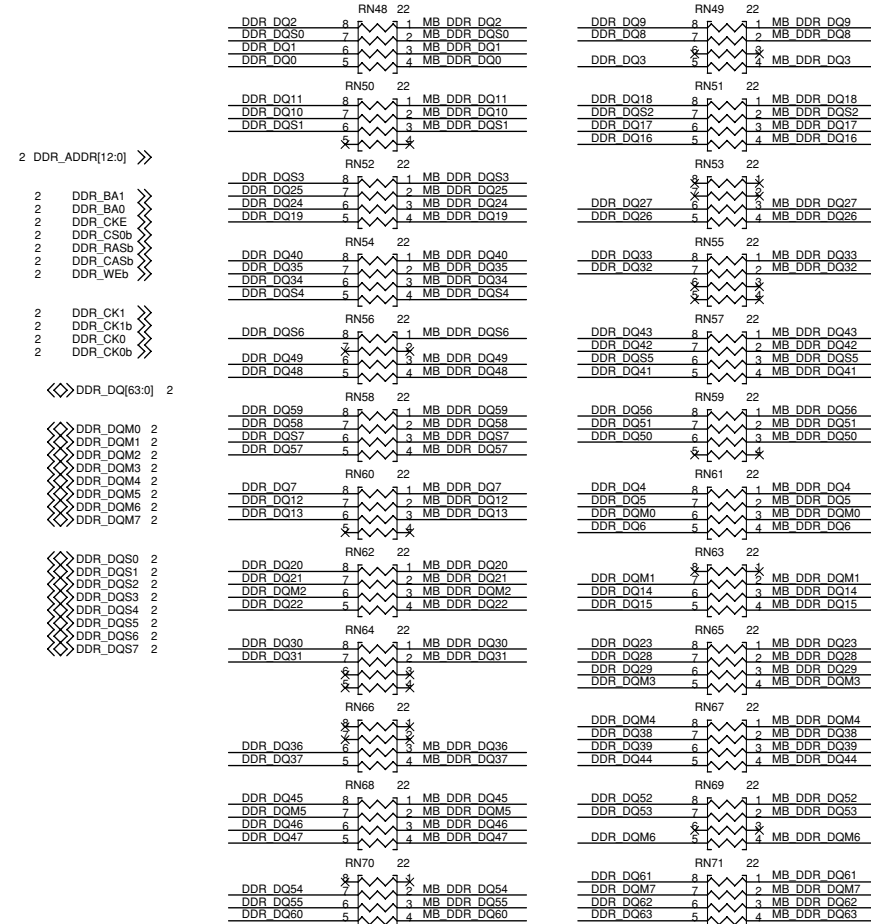

DTV MB ASSY (1/16)

• DDR TERM/CONN BLOCK

9.13 DTV MB ASSY (2/16)

DTV MB ASSY (2/16)

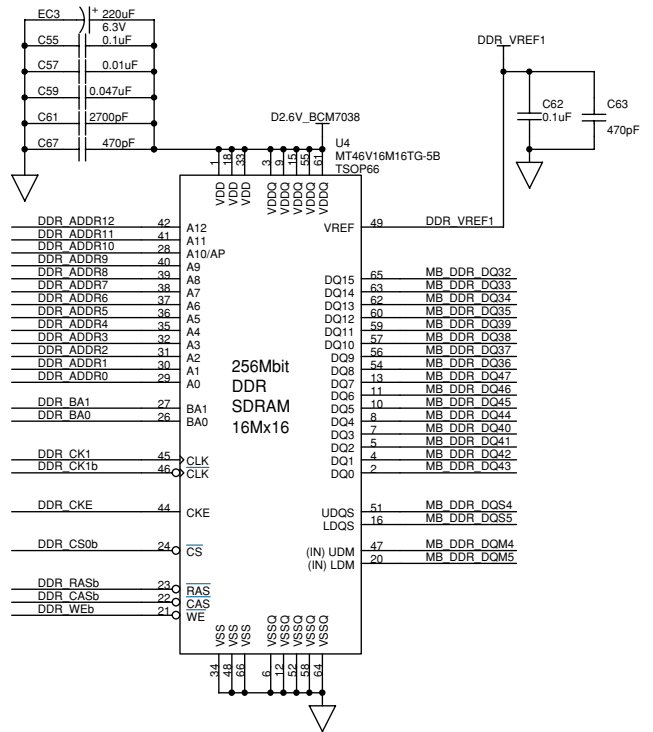

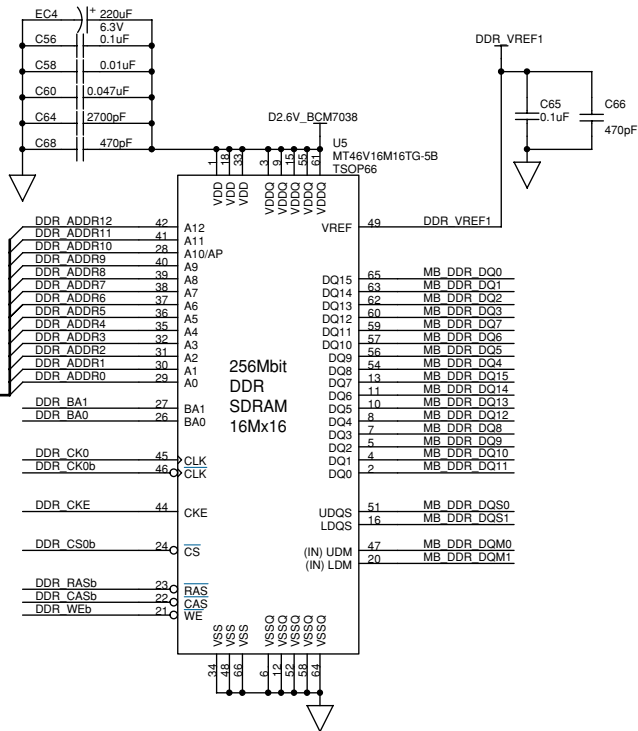

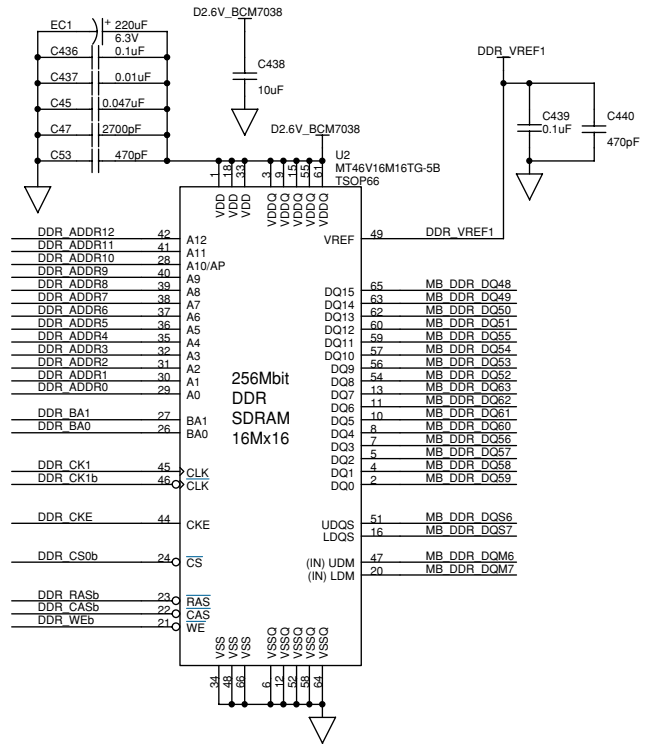

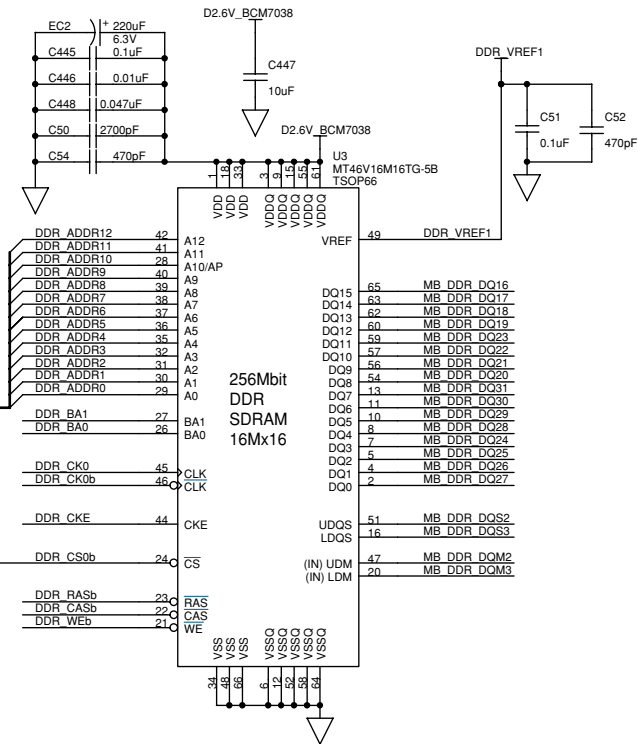

• DDR-SDRAM BLOCK

DDR routing rules:

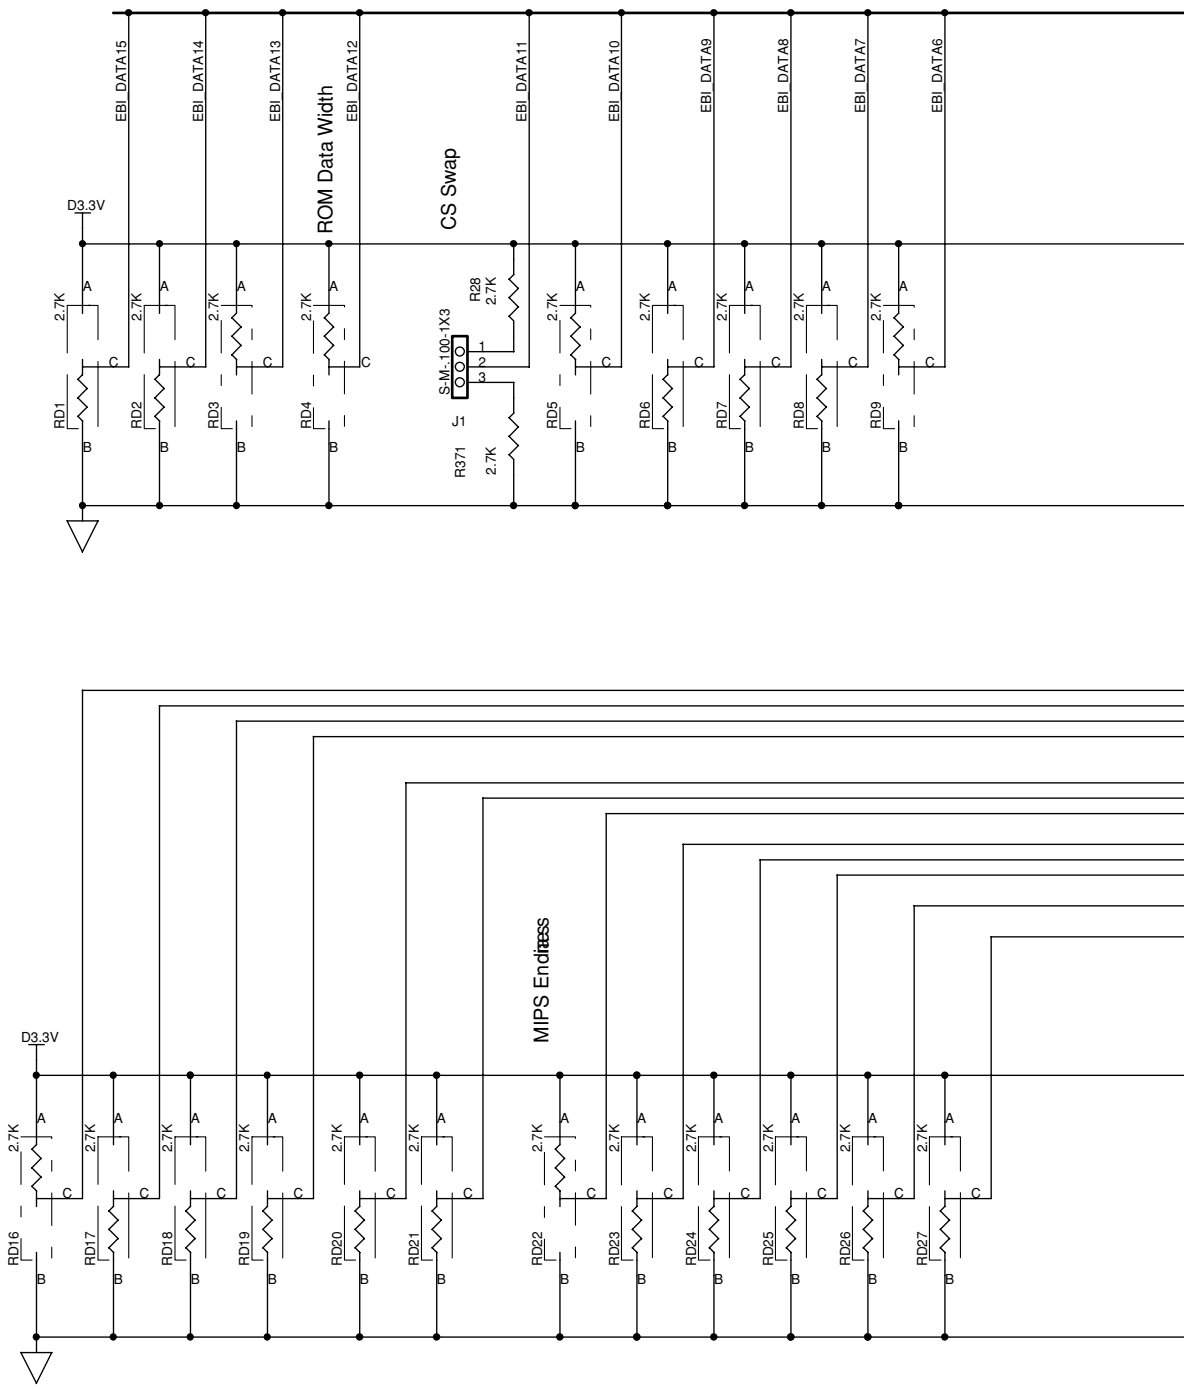

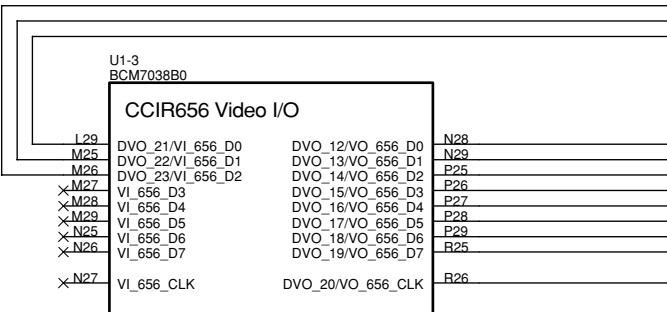

- 1) DQ/DQM skew within bytelane (DQ[7:0], DQ[15:8], DQ[23:16], DQ[31:24]) should be +/-100 mil w.r.t DQS
- 2) DQS delay for a particular bytelane shall be +/-250 mil w.r.t clk
- 3) DQS skew across all bytelanes should be less than 250 mil
- 4) Address & cntrl shall be +/-500 mil w.r.t clk
- 5) Place 22 ohm resistors on this page near DDR SDRAM.
- 6) Place 51 ohm resistors for Addr/Cntrl signals at the end of the line near the DDR SDRAM
- 7) Place DDR_VREF resistor dividers near BCM7038
- 8) Trace impedances need to be 60 ohms +/- 10% (54-66 ohms)
- 9) Route VREF with 30-mil trace and 1 high quality ceramic bypass capacitor for each connection to a device.

- USB;Ethernet;Sata BLOCK

Route TXP/M and RXP/M pairs differentially, matched short lengths, with 100 ohm differential impedance, adjacent to ground plane.

Stitch GND around
XTAL and caps inside
GND layer cutout

SATA & USB - Layout Guidelines & Notes

1. The Dp and Dn traces are length matched, with max differential skew, within 20mils
2. Differential trace length must be less than 5 inches
3. No more than 2 vias per trace, prefer zero.
4. Never split the ground plane under differential pair routing
5. Route differential pairs above the GND plane.
6. Differential impedance is 100 Ohms for SATA and 90 ohms for USB.
7. Adjacent differential pairs should be separated by at least 3 times the trace width.
(e.g. 7.5 mil trace, leave >22.5mils between adjacent diff pairs)
8. Stich gnd vias around each differential pair, but NOT between a given pair.
9. SATA xtal +/- 50 ppm Tolerance +/- 100 ppm Stability

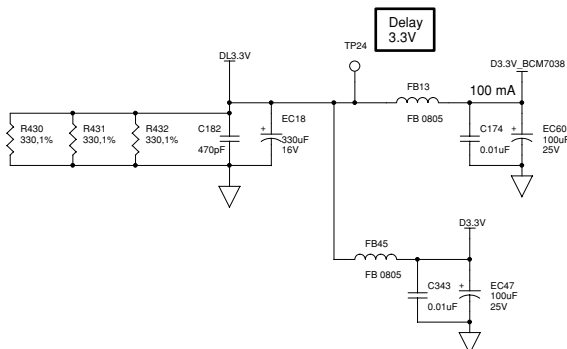

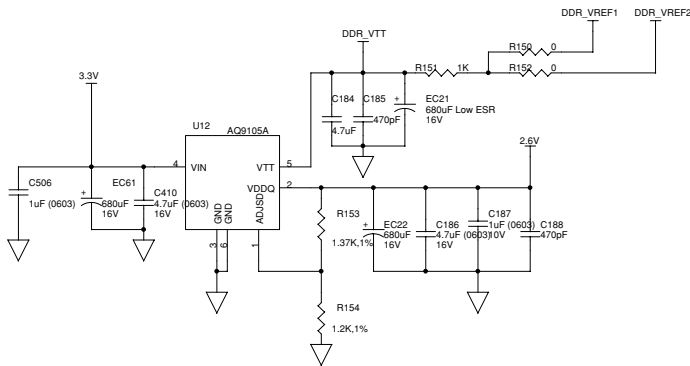

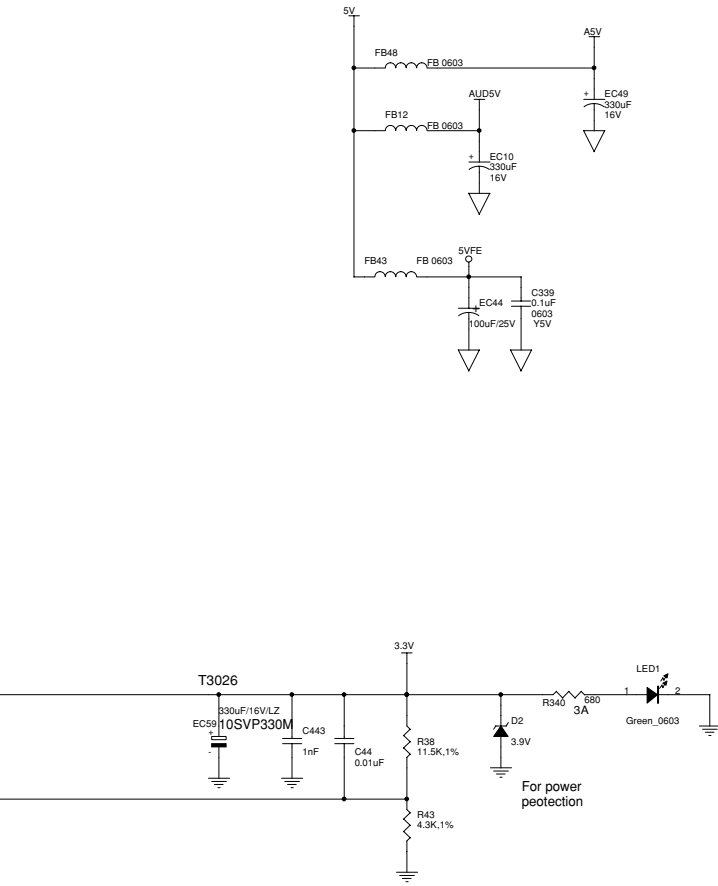

- POWER BLOCK

[illegible]

The schematic diagram illustrates the power supply circuitry for the SOT-223 component. It features two DC voltage sources: D1.2V and A1.2V. The D1.2V source is connected to a 3A MAX current limit and a 3.75A current measurement point. The A1.2V source is connected to a 750mA current measurement point. Both sources are connected to a common ground. The circuit includes several capacitors: C183 (0.01μF) and EC17 (1000μF). The components are labeled with their respective part numbers and values.

For details, refer to "Important Check Points for good servicing".

1. NOTES ON SERVICE VISIT

1.1 SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

SAFETY PRECAUTIONS

NOTICE : Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

- When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
- When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
- When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
- Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
- Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and servicetechnician.

6. Perform the following precautions against unwanted radiation and rise in internal temperature.

- Always return the internal wiring to the original styling.
- Attach parts (Gasket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.

7. Perform the following precautions for the PDP panel.

- When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
- Make sure that the panel vent does not break. (Check that the cover is attached.)
- Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.

8. Pay attention to the following.

- Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

Leakage Current Cold Check

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of 4 M Ω .

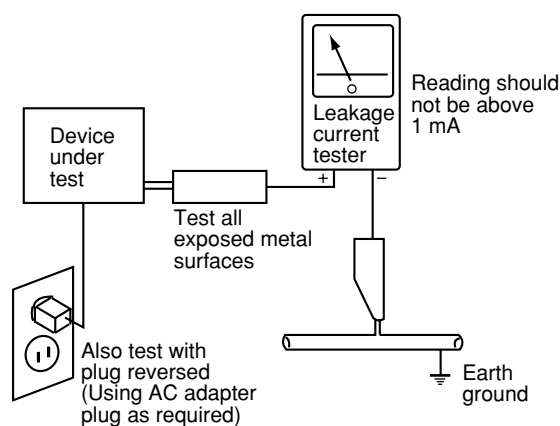

The below 4M Ω resistor value indicate an abnormality which require corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 1mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which dose not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

A

■ Charged Section

The places where the commercial AC power is used without passing through the power supply transformer.

If the places are touched, there is a risk of electric shock. In addition, the measuring equipment can be damaged if it is connected to the GND of the charged section and the GND of the non-charged section while connecting the set directly to the commercial AC power supply. Therefore, be sure to connect the set via an insulated transformer and supply the current.

- B
1. Power cord
 2. AC inlet
 3. Power switch (S1)
 4. Fuse (In the POWER SUPPLY Unit)
 5. STB transformer and Converter transformer (In the POWER SUPPLY Unit)
 6. Other primary side of the POWER SUPPLY Unit

- C
- : Part is Charged Section.
 ■ : Part is the High Voltage Generating Points other than the Charged Section.

■ High Voltage Generating Point

The places where voltage is 100 V or more except for the charged places described above. If the places are touched, there is a risk of electric shock.

The VSUS voltage remains for several minutes after the power to the unit is turned off. These places must not be touched until about 10 minutes after the power is turned off, or it is confirmed with a tester that there is no residual VSUS voltage.

If the procedures described in “10.3 POWER ON/OFF FUNCTION FOR THE LARGE-SIGNAL SYSTEM” are performed before the power is turned off, the voltage will be discharged in about 30 seconds.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol. Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification (addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris. Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs. In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages. If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries. Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification. Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance. Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

1.2 QUICK REFERENCE UPON SERVICE VISIT

Quick Reference upon Service Visit ① Notes, PD/SD diagnosis, and methods for various settings

Notes when visiting for service

1. Notes when disassembling/reassembling

① Rear case

When reassembling the rear case, the screws must be tightened in a specific order. Be careful not to tighten them in the wrong order forcibly. For details, see "Rear Case" in "6. DISASSEMBLY"

② Attaching screws for the HDMI connector

When attaching the HDMI connector after replacing the Main Assy, secure the HDMI connector manually with a screwdriver, but not with an electric screwdriver. If you tighten the screws too tightly with an electric screwdriver, the screw heads may be damaged, in which case the screws cannot be untightened/tightened any more.

2. On parts replacement

① How to discharge before replacing the Assys

A charge of significant voltage remains in the Plasma Panel even after the power is turned off. Safely discharge the panel before replacement of parts, in either manner indicated below:

A: Let the panel sit at least for 3 minutes after the power is turned off.

B: Turn the Large Signal System off before the power is turned off then, after 1 minute, turn the power off.

For details, see "10.2 Power ON/OFF Function for the Large-Signal System."

② On the settings after replacement of the Assys

Some boards need settings made after replacement of the Assys. For details, see "7. ADJUSTMENT"

3. On various settings

① SR+

After a repair using a PC, be sure to restore the setting for the RS-232C connector to SR+.

② Setting in Factory mode

After a Mask indication into the panel is performed, be sure to set the Mask setting to "OFF" then exit Factory mode.

PD/SD			Change of settings	
Item		No. of LEDs flashing		How to enter Factory mode using the supplied remote control unit
		Red	Blue	In the same way as with the remote control unit supplied with the 6th-generation model
Panel section	Communication with the panel drive IC		Blue 1	How to enter Integrator mode using the supplied remote control unit
	Communication with the module IIC		Blue 2	
	DIGITAL-RST2		Blue 3	
	Panel high temperature		Blue 4	
Main section	Audio		Blue 5	① Enter the Standby mode. ② Press [MENU]. ③ Press [TV ⏻].
	Communication with the Module microcomputer		Blue 6	
	Main 3-wire serial communication		Blue 7	
	Main IIC communication		Blue 8	How to switch UART ① (Integrator)
	Communication with the Main microcomputer		Blue 9	
	FAN		Blue 10	
	Unit high temperature		Blue 11	① Enter the Integrator mode. ② Display "OFF" using [➡]. ③ Change the communication speed using [↓], then [➡].
	Communication with the D-TUNER		Blue 12	
MTB-RST2/RST4			Blue 13	
POWER		Red 2		How to switch UART ② (During Standby)
SCAN		Red 3		
SCN-5V		Red 4		
Y-DRIVE		Red 5		① Enter the Standby mode. ② Hold [VOL +] or [VOL -] pressed for 3 seconds. ③ Hold [SPLIT] pressed for 3 seconds. ④-1 To set to 232C, press [ENTER]. ⑤-2 To set to SR+, press [HOME MENU].
Y-DCDC		Red 6		
Y-SUS		Red 7		
ADRS		Red 8		Note: If switching is completed successfully, the red LED will flash twice. Note 1: Use a remote control unit supplied with the 6th-generation models or later. Note 2: Do not hold a key pressed for more than 5 seconds.
X-DRIVE		Red 9		
X-DCDC		Red 10		
X-SUS		Red 11		
UNKNOWN		Red 15		

How to locate several items on the Factory menu

{ } : Item on the Factory menu
[] : Key on the remote control unit
" " : Screen indication

1. Confirmation of accumulated power-on time and power-on count

Select {INFORMATION} then {HOUR METER}.
(After entering Factory mode, press [↓] four times.)

2. Confirmation of the Power-down and Shutdown histories

① Panel system

PD: Select {PANEL FACTORY} then {POWER DOWN}.
(After entering Factory mode, press [MUTING] once, press [ENTER], then press [↓] three times.)

SD: Select {PANEL FACTORY} then {SHUT DOWN}.
(After entering Factory mode, press [MUTING] once, press [ENTER], then press [↓] four times.)

② Main Assy

Select {INFORMATION} then {MAIN NG}.
(After entering Factory mode, press [↓] three times.)

3. How to display the Mask indication

① Mask indication in the panel side

1. Select {PANEL FACTORY} then {RASTER MASK SETUP}.
(After entering Factory mode, press [MUTING] once, press [ENTER], then press [↓] 8 times.)

2. Press [ENTER], then select a Mask indication, using [↑] or [↓].

② Mask (SG screen) indication in the Main Assy (MAIN VDEC)

1. Select either Input 1 or 2, to which no signal is input (black screen).
2. Select {INITIALIZE} then {SG MODE}. Press [←]. (After entering Factory mode, press [MUTING] three times, then press [↓] once.)
Then, the indication at the lower right of the screen changes from "OFF" to "ANA AD YCBCR".

3. You can change Mask patterns by pressing [↓] to select {SG PATTERN} then using [←] or [→].

Note: When you switch "SG MODE" routes, some displays become monochrome, as they are in Y-signal only mode.

Adjustments and Settings after replacement of the Assys (Procedures in Factory mode)

1. Digital Video Assy: Transfer of backup data

- ① Select {PANEL FACTORY}, {ETC}, then {BACKUP DATA}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [↓] seven times, then press [ENTER].)
- ② Select {TRANSFER}, using [→], then hold [SET] pressed for at least 5 seconds.
- ③ After transfer of backup data is completed, {ETC} is automatically selected, and the LED on the front panel returns to normal lighting.

2. MAIN Assy : Switching to SR+ from RS-232C

- ① Enter the Integrator mode. (The way is described above.)
- ② As SR+ <=> is [OFF] state, switch to [ON] state by using [→].
- ③ Turn the POWER switch of the main unit off by the remote control.

3. POWER SUPPLY Unit: Clearance of the accumulated power-on count and maximum temperature value

- ① Select {PANEL FACTORY}, {ETC}, then {P COUNT INFO}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [↓] seven times, press [ENTER], then press [↓] six times.)
- ② Press [→] to select "CLEAR". Hold [SET] pressed for at least 5 seconds.
After clearance is completed, "ETC" is automatically selected. Clear the maximum temperature value (MAX TEMP) in the same manner.

4. Other Assys: Clearance of the maximum temperature value

- ① Select {PANEL FACTORY}, {ETC}, then {MAX TEMP}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [↓] seven times, press [ENTER], then press [↓] seven times.)
- ② Press [→] to select "CLEAR". Hold [SET] pressed for at least 5 seconds.
After clearance is completed, "ETC" is automatically selected.

2. EXPLODED VIEWS AND PARTS LIST

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Screws adjacent to ▼ mark on product are used for disassembly.
- For the applying amount of lubricants or glue, follow the instructions in this manual. (In the case of no amount instructions, apply as you think it appropriate.)

3. PCB PARTS LIST

NOTES: ●Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

●The ⚠ mark found on some component parts indicates the importance of the safety factor of the part.

Therefore, when replacing, be sure to use parts of identical designation.

●When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω → 56 × 10¹ → 561 RD1/4PU 561 J

47k Ω → 47 × 10³ → 473 RD1/4PU 473 J

0.5 Ω → R50 RN2H R50 K

1 Ω → 1R0 RS1P 1R0 K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω → 562 × 10¹ → 5621 RN1/4PC 5621 F

JUMPER CONNECTOR

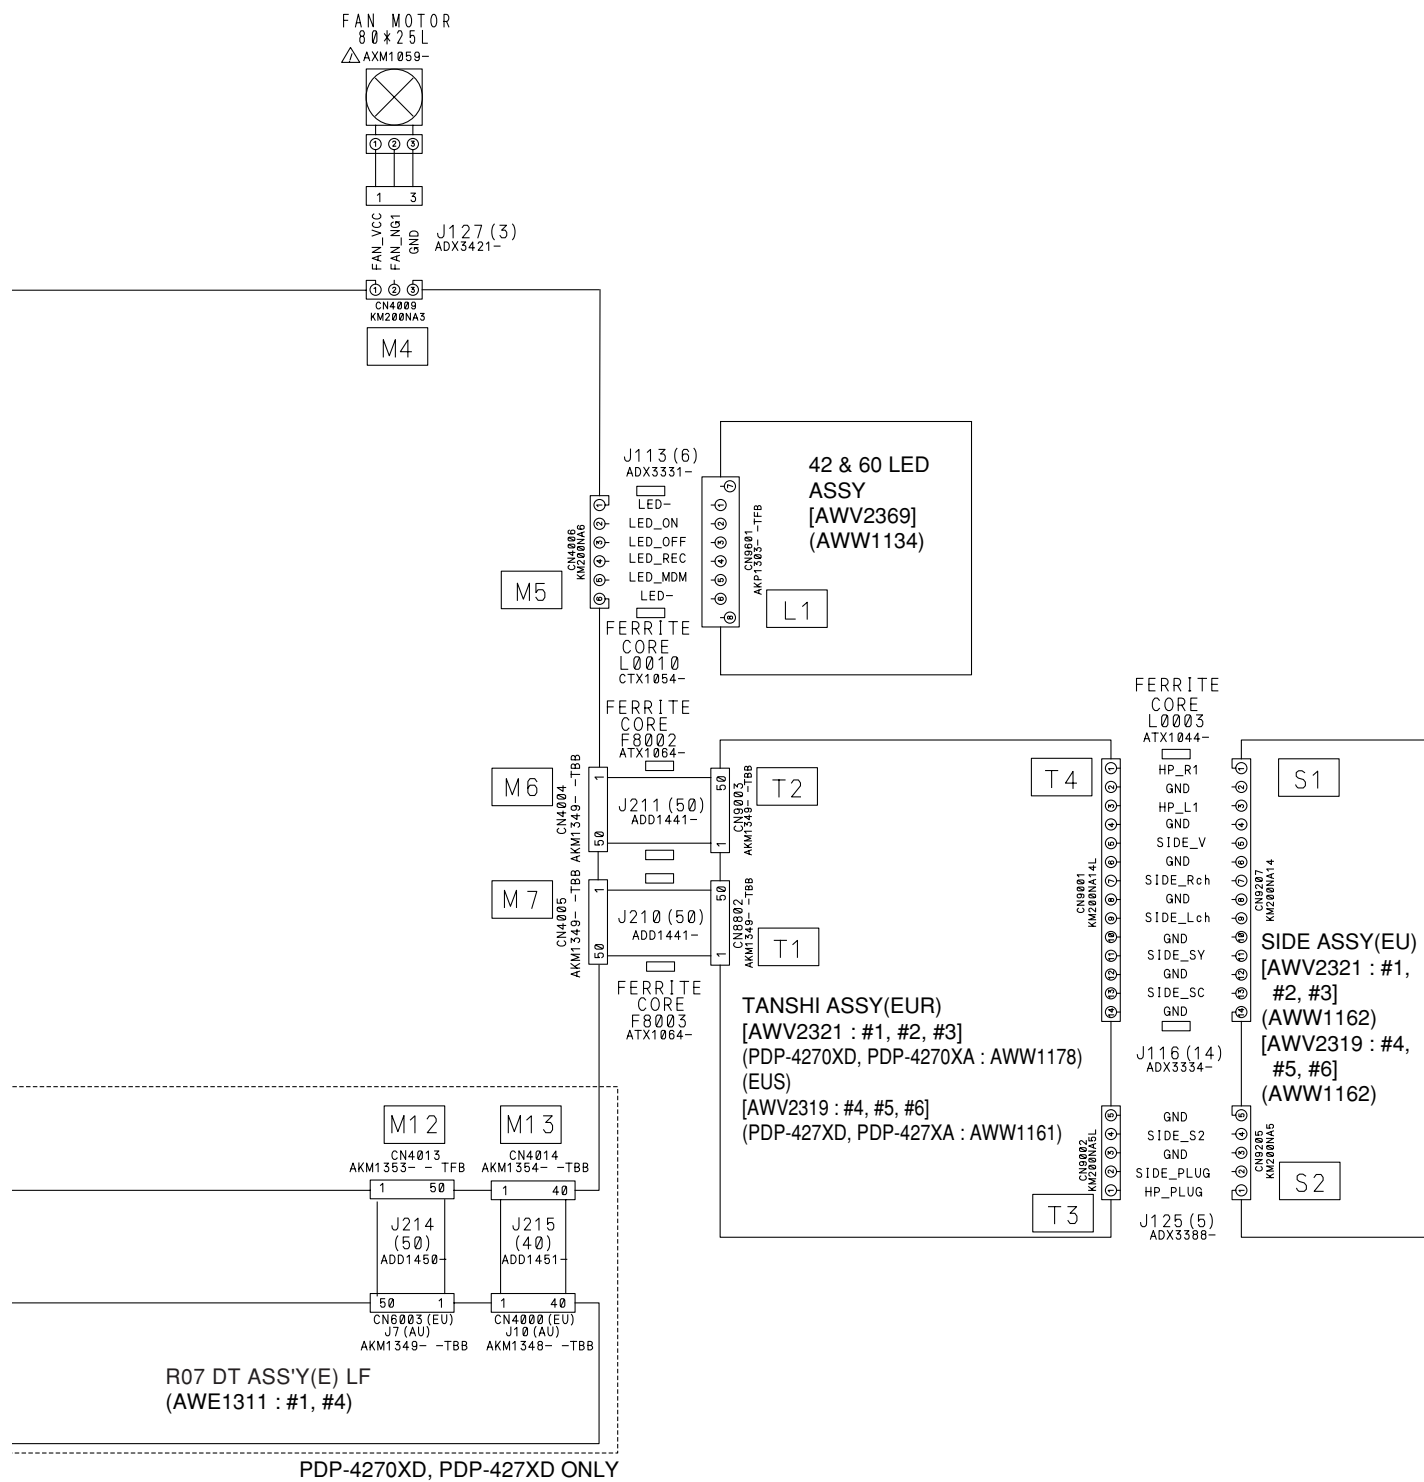

- When ordering service parts, be sure to refer to "EXPLODED VIEWS and PARTS LIST" or "PCB PARTS LIST".
- The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- The encircled numbers denote measuring point in the schematic diagram. Waveforms, refer to service manual (ARP3392).

4.18 WAVEFORMS

42 ADDRESS Assy

A

Control signals of resonance circuit (1 field)

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: ADR_B (side-A test plane "B")
V: 2 V/div H: 2 mS/div
- ② CH2: ADR_U (side-A test plane "U")
V: 2 V/div H: 2 mS/div
- ③ CH3: ADR_D (side-A test plane "D")
V: 2 V/div H: 2 mS/div

B

Control signals of resonance circuit (resonance part)

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: ADR_B (side-A test plane "B")
V: 2 V/div H: 200 nS/div
- ② CH2: ADR_U (side-A test plane "U")
V: 2 V/div H: 200 nS/div
- ③ CH3: ADR_D (side-A test plane "D")
V: 2 V/div H: 200 nS/div

C

VADR (1 field)

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: IC1555 - pin 3 (VDD2) (side-A through hole)
V: 10 V/div H: 2 mS/div

D

VADR (1 field)

Input: VIDEO 60Hz
Signal: Checkered pattern of Black-White (MKSS13)

- ① CH1: IC1555 - pin 3 (VDD2) (side-A through hole)
V: 10 V/div H: 2 mS/div

E

VADR (resonance part)

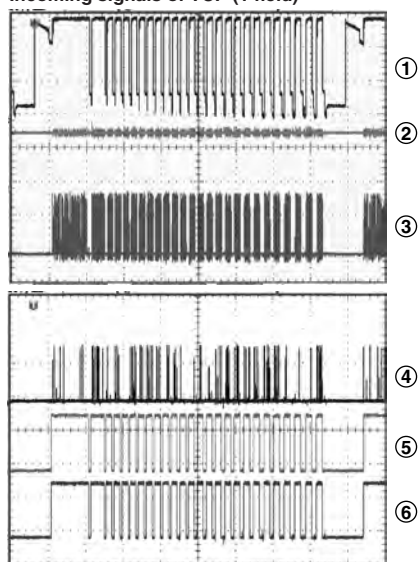

Input: VIDEO 60Hz
Signal: Checkered pattern of Black-White (MKSS13)

- ① CH1: IC1555 - pin 3 (VDD2) (side-A through hole)
V: 10 V/div H: 200 nS/div

F

Incoming signals of TCP (1 field)

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: IC1555 - pin 3 (VDD2) (side-A through hole)
V: 20 V/div H: 2 mS/div
- ② CH2: IC1555 - pin 9 (A3) (side-A test plane "R_E")
V: 2 V/div H: 2 mS/div
- ③ CH3: IC1555 - pin 16 (CLK) (side-A test plane "CLK1")
V: 2 V/div H: 2 mS/div
- ④ CH1: IC1555 - pin 14 (LE) (side-A test plane "LE_E")
V: 2 V/div H: 2 mS/div
- ⑤ CH2: IC1555 - pin 19 (HBLK) (side-A test plane "HBLK")
V: 2 V/div H: 2 mS/div
- ⑥ CH3: IC1555 - pin 17 (LBLK) (side-A test plane "LBLK")
V: 2 V/div H: 2 mS/div

Incoming signals of TCP (1 field)

Input: VIDEO 60Hz
Signal: Checkered pattern of Black-White (MKSS13)

- ① CH1: IC1555 - pin 3 (VDD2) (side-A through hole)
V: 20 V/div H: 2 mS/div
- ② CH2: IC1555 - pin 9 (A3) (side-A test plane "R_E")
V: 2 V/div H: 2 mS/div
- ③ CH3: IC1555 - pin 16 (CLK) (side-A test plane "CLK1")
V: 2 V/div H: 2 mS/div
- ④ CH1: IC1555 - pin 14 (LE) (side-A test plane "LE_E")
V: 2 V/div H: 2 mS/div
- ⑤ CH2: IC1555 - pin 19 (HBLK) (side-A test plane "HBLK")
V: 2 V/div H: 2 mS/div
- ⑥ CH3: IC1555 - pin 17 (LBLK) (side-A test plane "LBLK")
V: 2 V/div H: 2 mS/div

Incoming signals of TCP (resonance part)

Input: VIDEO 60Hz
Signal: Checkered pattern of Black-White (MKSS13)

- ① CH1: IC1555 - pin 3 (VDD2) (side-A through hole)
V: 20 V/div H: 200 nS/div
- ② CH2: IC1555 - pin 9 (A3) (side-A test plane "R_E")
V: 2 V/div H: 200 nS/div
- ③ CH3: IC1555 - pin 16 (CLK) (side-A test plane "CLK1")
V: 2 V/div H: 200 nS/div
- ④ CH1: IC1555 - pin 14 (LE) (side-A test plane "LE_E")
V: 2 V/div H: 200 nS/div
- ⑤ CH2: IC1555 - pin 19 (HBLK) (side-A test plane "HBLK")
V: 2 V/div H: 200 nS/div
- ⑥ CH3: IC1555 - pin 17 (LBLK) (side-A test plane "LBLK")
V: 2 V/div H: 200 nS/div

42 X DRIVE Assy, 42 Y DRIVE Assy, 42 SCAN A Assy, 42 SCAN B Assy

A

Drive output signal (1 field)

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: R1277 (XPSUS) ↔ K1203 (SUSGND)
V: 100 V/div H: 2 mS/div
(42 X DRIVE Assy)
- ② CH2: K2701 (SCANOUT) ↔ K2330 (SUSGND)
V: 100 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ③ CH3: F2301 (YPSUS) ↔ K2330 (SUSGND)
V: 100 V/div H: 2 mS/div
(42 Y DRIVE Assy)

B

X drive pulse control signal (color-bar)(resonance part)

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: K1009 (XSUS-MSK) ↔ K1002 (DGND)
V: 2 V/div H: 2 mS/div
(42 X DRIVE Assy)
- ② CH2: K1005 (XNR-D) ↔ K1002 (DGND)
V: 2 V/div H: 2 mS/div
(42 X DRIVE Assy)

C

Y drive pulse control signal (color-bar)

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: K2007 (YNOFS) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ② CH2: K2005 (YSUS-MSK) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ③ Ref3: K2008 (YNRST) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ④ CH3: K2006 (SOFT_D) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ⑤ CH4: K2023 (YRP_U) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)

D

Scan control signal (Color-bar)

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: TP2001 (LE) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ② CH2: TP2008 (CLK) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ③ CH3: TP2003 (Si-H) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ④ Ref1: TP2004 (CLR) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ⑤ Ref2: TP2005 (OC2) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)
- ⑥ Ref3: TP2006 (OC1) ↔ K2002 (GND_D)
V: 5 V/div H: 2 mS/div
(42 Y DRIVE Assy)

F

Reset pulse signal

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: R1277 (XPSUS) ↔ K1203 (SUSGND)
V: 100 V/div H: 200 μ S/div
(42 X DRIVE Assy)
- ② CH2: K2701 (SCANOUT) ↔ K2330 (SUSGND)
V: 100 V/div H: 200 μ S/div
(42 Y DRIVE Assy)
- ③ CH3: F2301 (YPSUS) ↔ K2330 (SUSGND)
V: 100 V/div H: 200 μ S/div
(42 Y DRIVE Assy)

Sustain pulse signal (1 sub, subfield)

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

- ① CH1: R1277 (XPSUS) ↔ K1203 (SUSGND)
V: 100 V/div H: 4 μ S/div
(42 X DRIVE Assy)
- ② CH2: K2701 (SCANOUT) ↔ K2330 (SUSGND)
V: 100 V/div H: 4 μ S/div
(42 Y DRIVE Assy)
- ③ CH3: F2301 (YPSUS) ↔ K2330 (SUSGND)
V: 100 V/div H: 4 μ S/div
(42 Y DRIVE Assy)

Sustain pulse signal

Input: VIDEO 60Hz
Signal: COLOR BAR (MKSS17)

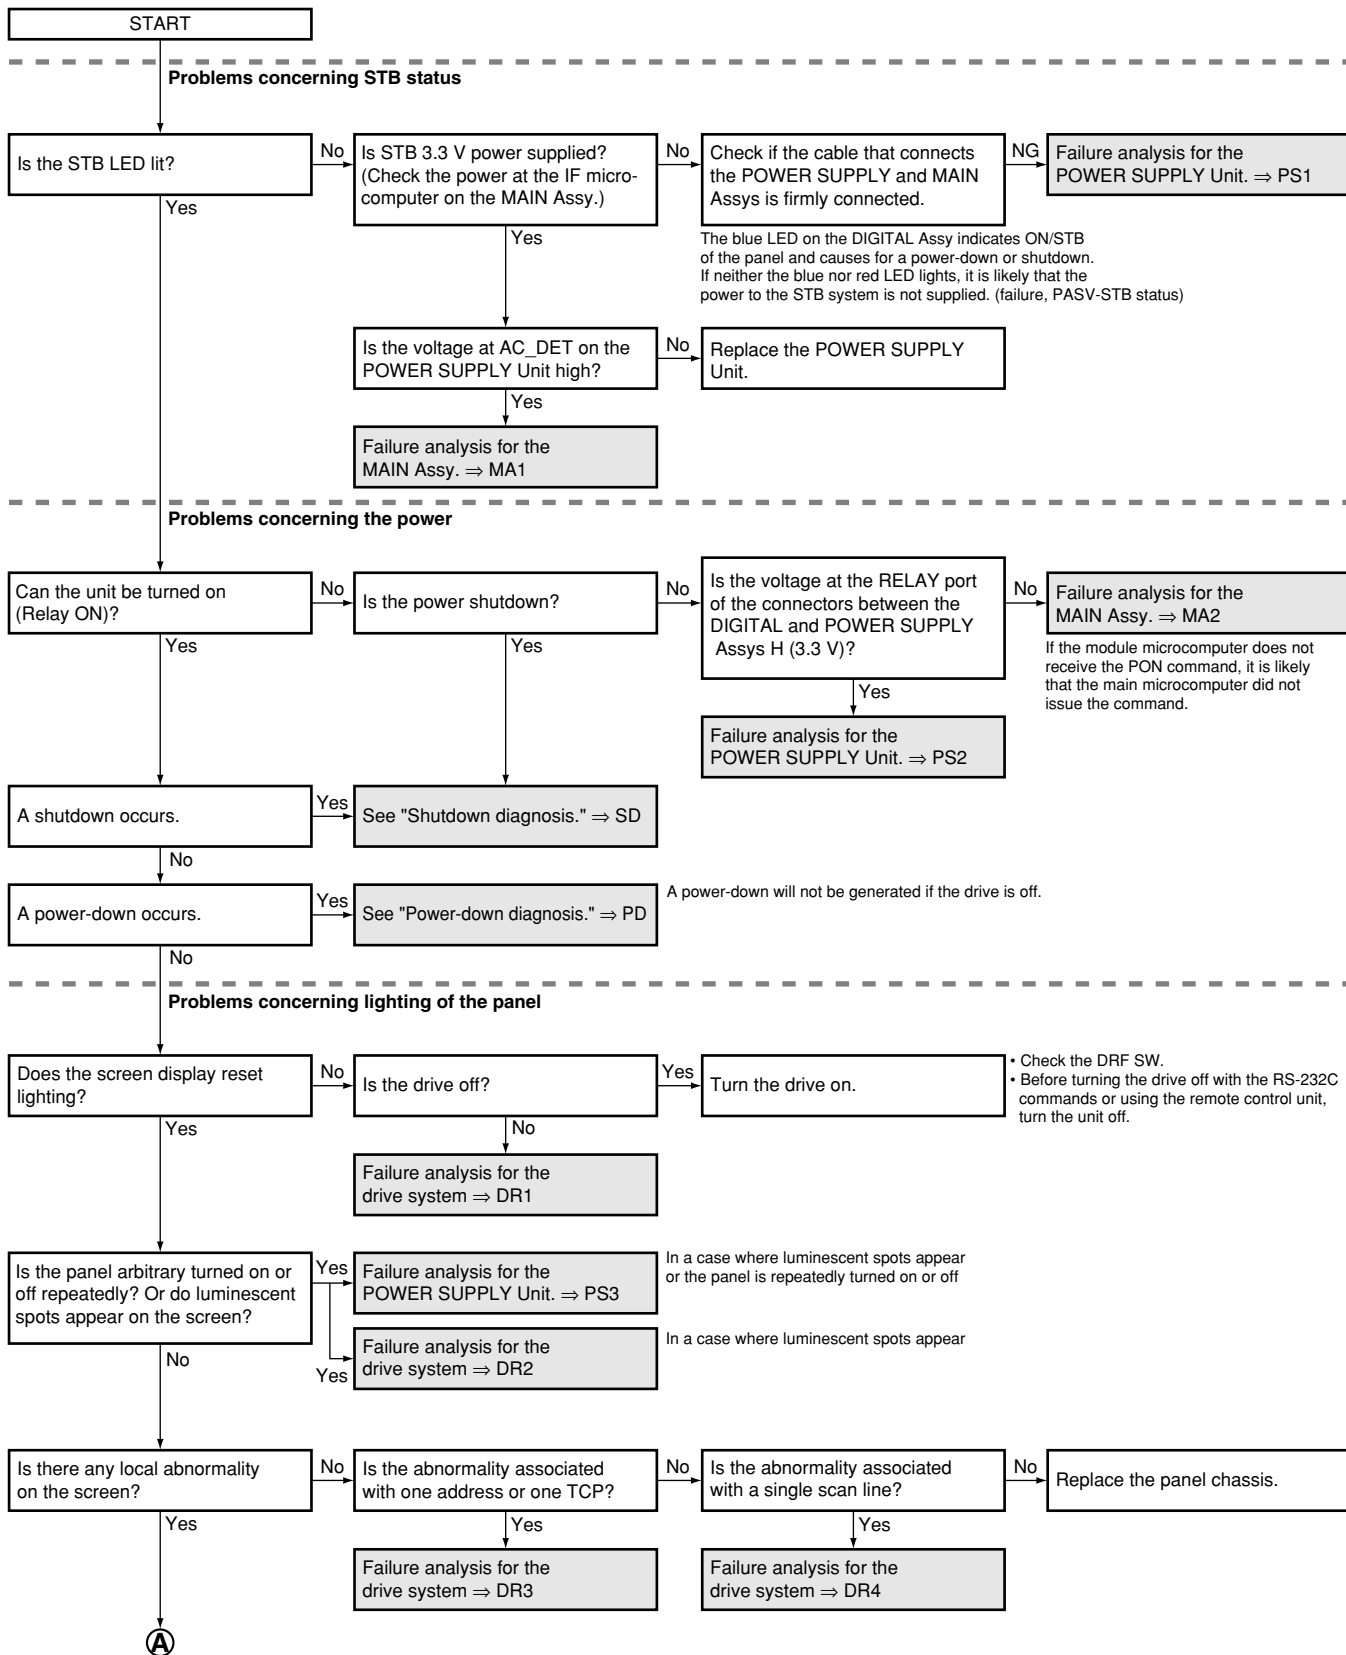

- ① CH1: F2301 (YPSUS) ↔ K2330 (SUSGND)
V: 100 V/div H: 400 nS/div
(42 Y DRIVE Assy)
- ② Ref3: K2004 (YSUS-G) ↔ K2002 (GND_D)
V: 5 V/div H: 400 nS/div
(42 Y DRIVE Assy)
- ③ Ref2: K2011 (YSUS-U) ↔ K2002 (GND_D)
V: 5 V/div H: 400 nS/div
(42 Y DRIVE Assy)
- ④ CH2: K2009 (YSUS-B) ↔ K2002 (GND_D)
V: 5 V/div H: 400 nS/div
(42 Y DRIVE Assy)
- ⑤ CH3: K2010 (YSUS-D) ↔ K2002 (GND_D)
V: 5 V/div H: 400 nS/div
(42 Y DRIVE Assy)

5. DIAGNOSIS

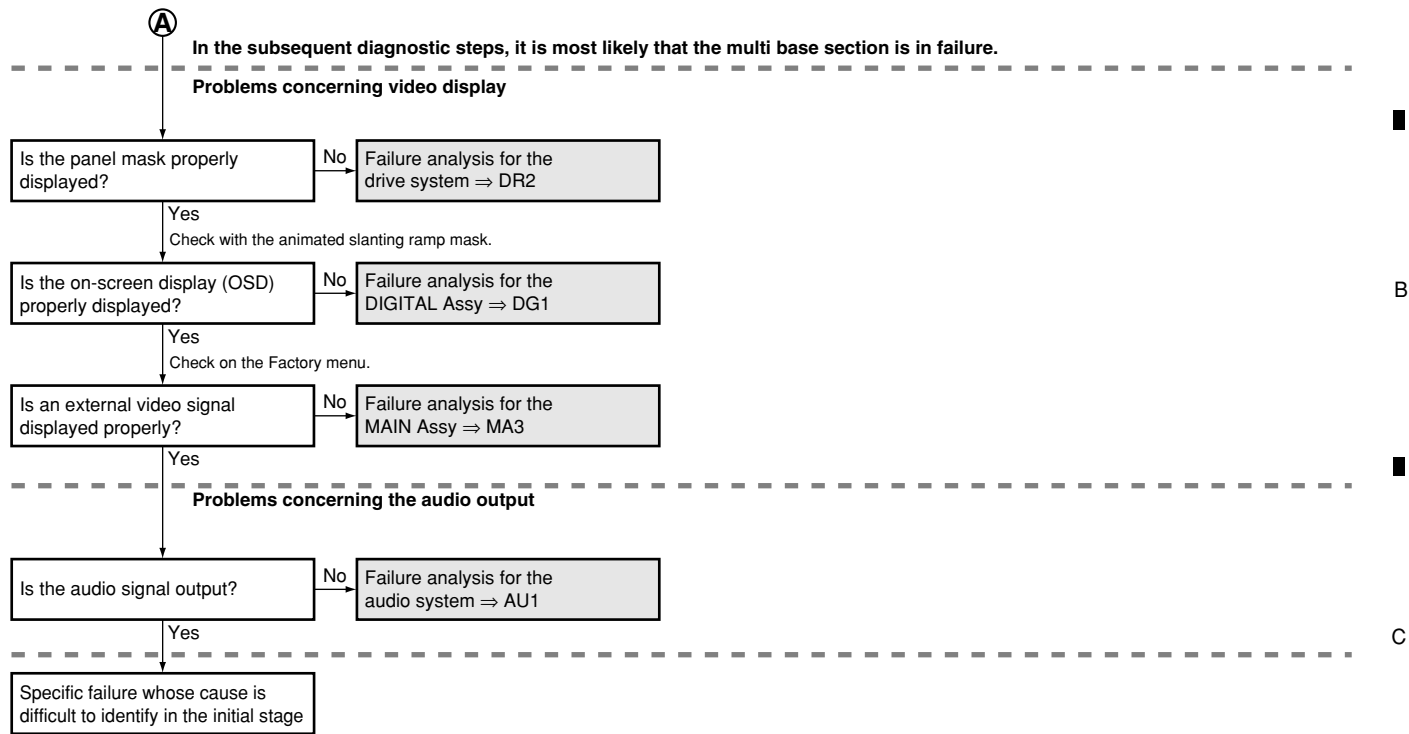

5.1 TROUBLE SHOOTING

5.1.1 FLOWCHART OF FAILURE ANALYSIS FOR THE WHOLE UNIT

Flowchart of Failure Analysis for The Whole Unit

Flowchart of Failure Analysis for The Whole Unit

5.1.2 FLOWCHART OF FAILURE ANALYSIS FOR THE POWER SUPPLY UNIT

Flowchart of Failure Analysis for The POWER SUPPLY Unit

Failure analysis for the
POWER SUPPLY Unit. ⇒ PS1

STB 3.3 V power is not output.

Is the cable connected firmly to
the P8 connector?

No

Properly connect the cable
between the P8 and M1 connectors.

Yes

Is the cable to the P8 connector
broken?

Yes

Replace the defective cable (J105).

Check the voltage at the DIGITAL Assy and
POWER SUPPLY Unit.

No

Is the fuse (F101) blown?

No

Replace the POWER SUPPLY
Unit.

Yes

Is one of the limiting resistors
(R104/R105) blown?

No

Replace the POWER SUPPLY
Unit.

Check the resistance between L102 (lead
nearest R104) and the D121 anode,
using a tester.

Yes

The POWER SUPPLY Unit is
normal.

Failure analysis for the
POWER SUPPLY Unit. ⇒ PS2

The power is not on, even though
the RELAY port is active.

Is the relay (RL102) on?

No

Replace the POWER SUPPLY
Unit.

- Check the relay operation at the terminal
(Pin 11 of P4). (Voltage: 3.3 V)
- Check the relay sound (click).

Yes

Is the PFC voltage normal?

No

Replace the POWER SUPPLY
Unit.

- Check the voltage between the D204
cathode and RC101 (negative) terminal.
- The voltage must be around 390 V
(failure if it is 340 V or less).

Caution: High voltage!

Yes

The POWER SUPPLY Unit is
normal.

Failure analysis for the
POWER SUPPLY Unit. ⇒ PS3

The cells of the panel do not
light normally.

Is the VADR voltage within the
specified values?

No

Replace the POWER SUPPLY
Unit.

The specified voltage values are between
57 and 63 V.

Yes

Is there a fluctuation in the
VADR voltage?

Yes

Replace the POWER SUPPLY
Unit.

The ripple must be within 5 V.

No

Is the VSUS voltage within the
specified range?

No

Replace the POWER SUPPLY
Unit.

The specified voltage values are between
200 and 210 V (VSU: 125/35°C).

Yes

Is there a fluctuation in the
VSUS voltage?

Yes

Replace the POWER SUPPLY
Unit.

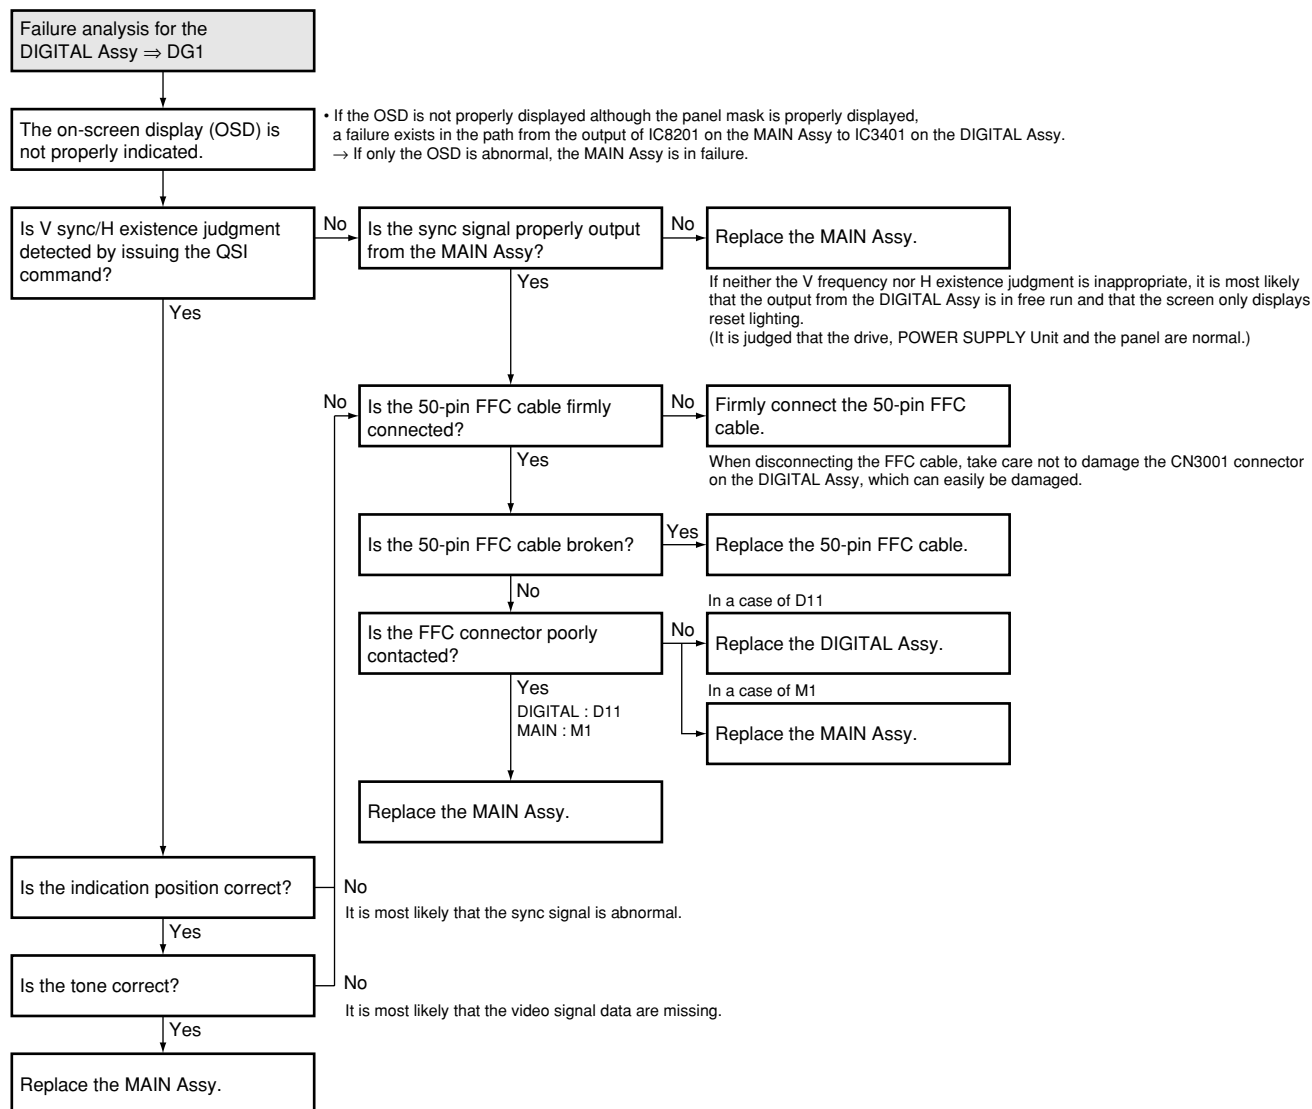

The ripple must be within 10 V.

No

The POWER SUPPLY Unit is
normal.

⇒ COMP/PC2

Image for the PC signal is not displayed.

Yes

Is the function corresponding to selected signal input selected?

No

Select the corresponding signal with the input selector.

Yes

Has the signal arrived at IC4901 ?
(pins 61, 62, 64, 66, 68)

No

Check the flexible cable between the CN9301 and CN4018 or around of jack.

No

Replace the flexible cable.

③① ③② ③③ ③④ ③⑤

Yes

Which signal is not output, main or sub signal?

Sub

Is the screen of main side Analog/Digital TV?

No

Specifications that does not display in the sub-side.

Main

Yes

Is a signal output from IC4901?
(pins 41, 43, 45)

No

Check around IC4901 and check the communications between IC4901 and the microcomputer.
If there was no problem, replace the MAIN Assy.

Yes

Has the signal arrived at IC5301?
(pins 43, 48, 54)

No

Check the circuit between IC4901 and IC5301.
If there was no problem, replace the MAIN Assy.

Yes

Is the communication between each IC (VDEC, ASIC) on the MAIN Assy and the microcomputer normal?

No

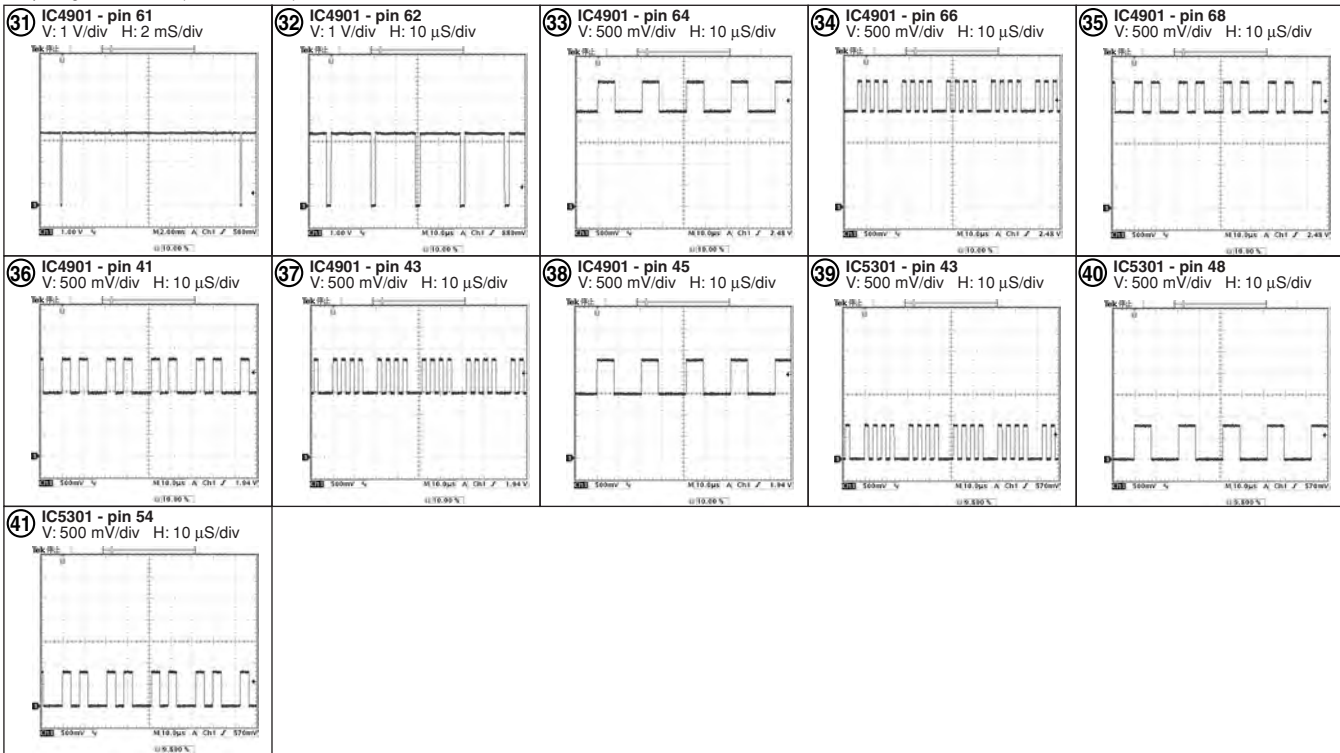

Check around the IC that is found to have a failure in communication and the microcomputer.
If there was no problem, replace the MAIN Assy.

Yes

Replace the MAIN Assy.

5.2 DIAGNOSIS OF PD (POWER-DOWN)

5.2.1 BLOCK DIAGRAM OF THE POWER-DOWN SIGNAL

Note:
The figures ② to ⑪ indicate the number of times the LED flashes when power-down occurs in the corresponding route.

5.2.2 DIAGNOSIS OF THE PD (POWER-DOWN)

Prediction of failure symptoms when a PD (power-down) is generated

LED Flashing Count	PD Circuit	Checkpoint	Main Cause
2	Power supply PD	POWER SUPPLY Unit	Failure in the POWER SUPPLY Unit
3	SCAN PD	SCAN A, B Assy	SCAN IC is damaged (short-circuiting between VH and GNDH)
		Y DRIVE Assy	Connectors disconnected between the POWER SUPPLY Unit and the Y DRIVE Assy Connectors disconnected between the DIGITAL and the Y DRIVE Assys Failure in the VH power
4	IC5V PD	SCAN A, B Assy	SCAN IC is damaged (short-circuiting between IC5V and GNDH) Disconnection of the scan-bridge (15-pin) connector
		Y DRIVE Assy	Failure in the photo coupler Abnormality in the IC5V DC/DC converter
5	Y-DRIVE PD	Y DRIVE Assy	Abnormality in the 16.5 V power
6	Y DCDC PD	Y DRIVE Assy	Abnormality in the VOFS DC/DC converter
			Abnormality in the VPRST DC/DC converter
			Abnormality in VC_15V DC/DC converter
7	Y SUS PD	Y DRIVE Assy	Abnormality in the DK module
			Abnormality in the control signal line
8	Address PD	ADDRESS Assy	Short-circuiting of Vadr TCP damaged
9	X-DRIVE PD	X DRIVE Assy	Connectors disconnected between the DIGITAL and the X DRIVE Assys
			Abnormality in the 16.5 V power
10	X DCDC PD	X DRIVE Assy	Abnormality in VC_15V power
			Abnormality in VXNRST power
11	X SUS PD	X DRIVE Assy	Abnormality in the DK module
			Abnormality in the control signal line
			Connectors disconnected between the POWER SUPPLY Unit and the X DRIVE Assy

How to distinguish which connector is disconnected

Assy	Connector	To which Assy the Connector is Connected	Frequency of LED Flashing	Screen Display
X DRIVE Assy	CN1001	DIGITAL Assy	11 (XDRIVE)	—
	CN1204	POWER SUPPLY Unit (ADR system power)	—	White (left half of the screen)
	CN1206	POWER SUPPLY Unit (drive system power)	12 (X-SUS)	—
	CN1201, CN1202, CN1203, CN1205	ADDRESS Assy	8 (ADR)	—
Y DRIVE Assy	CN2001	DIGITAL Assy	3 (SCAN)	—
	CN2351	POWER SUPPLY Unit (drive system power)	3 (SCAN)	—
	CN2353	POWER SUPPLY Unit (ADR system power)	—	White (right half of the screen)
	CN2354, CN2355, CN2356, CN2357	ADDRESS Assy	8 (ADR)	—
	CN2401, CN2402	SCAN A, B Assy	4 (SCN-5V)	—
SCAN A, B Assy	CN2701, CN2801	Y DRIVE Assy	4 (SCN-5V)	—
ADDRESS Assy	CN1502, CN1702	DIGITAL Assy	8 (ADRS)	—
	CN1501, CN1701	X DRIVE Assy, Y DRIVE Assy	8 (ADRS)	—

■ How to identify the cause of a power-down that is indicated by 2-times flashing of the red LED

The cause of a power-down that is indicated by 2-times flashing of the red LED can be identified by performing the steps ① to ③ below:

- ① Visual check with the power off
- ② Tester check with the power off
- ③ Check with the power on

① Status check with the power off

Check if the cables and FFC cables that are connected to the Y DRIVE Assy are firmly connected.

② Tester check with the power off

1. Check between Vsus and SUSGND with a tester

Disconnect all cables from the X and Y DRIVE Assys and check if there is short-circuiting between Vsus and SUSGND in the X and Y DRIVE Assys.

- How to check if there is short-circuiting on the X DRIVE Assy:
If there is short-circuiting between Vsus and SUS OUT, and SUS OUT and SUSGND, the X Mask Module is damaged.
If they are not short-circuited, check other elements to see if they are short-circuited.
- How to check if there is short-circuiting on the Y DRIVE Assy:
If there is short-circuiting between Vsus and SUS OUT, and SUS OUT and SUSGND, the Y Mask Module is damaged.
If they are not short-circuited, check other elements to see if they are short-circuited.
- Check for short-circuiting in the Power supply.

Note that at the beginning of measuring with a tester, charging of an electrolytic capacitor may cause a phenomenon like short-circuiting. However, the resistance will soon rise if there is no short-circuiting.

2. Check for short-circuiting between VH and PSUS with a tester

Disconnect the cables that connect the bridge connectors between the Y DRIVE Assy and upper and lower SCAN Assys.

- If there is short-circuiting in the upper SCAN Assy, one of Scan ICs in the upper SCAN Assy is damaged.
- If there is short-circuiting in the lower SCAN Assy, one of Scan ICs in the lower SCAN Assy is damaged.
- If there is short-circuiting in the Y DRIVE Assy, a circuit in the Y DRIVE Assy is short-circuited.

If no short-circuiting is detected up to this stage, the power-down in question is proved not to be caused by short-circuiting. Therefore, it is assumed that the power-down occurred because power had not been supplied to Vsus or VH for some reason.

③ Check immediately after the unit is turned on before a power-down occurs.

If the Vsus voltage does not increase, the POWER SUPPLY Unit is in failure.

If the VH voltage does not increase, the VH DC/DC converter in the Y DRIVE Assy is in failure.

④ Check the PD detection circuit.

If no problem is detected in steps ① to ③, a power-down occurred even though the voltage was normal. Therefore, the PD detection circuit may be in failure.

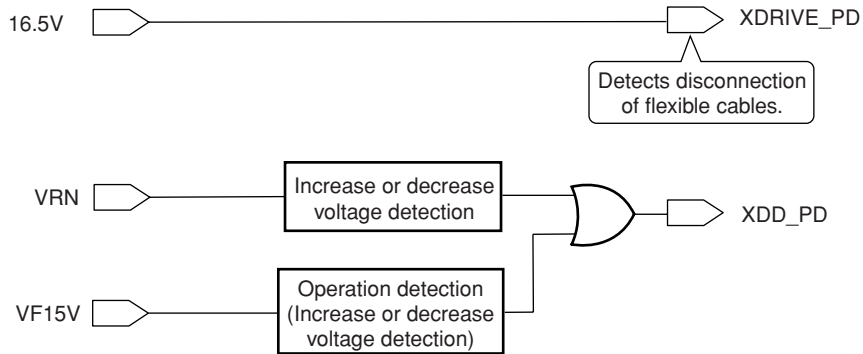

By following the above procedures, the real cause of a power-down can be judged.

5.3 DIAGNOSIS OF SD (SHUTDOWN)

5.3.1 BLOCK DIAGRAM OF THE SHUTDOWN SIGNAL

Note : The figures ① to ⑬ indicate the number of times the LED flashes when shut-down occurs in the corresponding route.

5.3.2 SD (SHUTDOWN) DIAGNOSIS

Frequency of LED Flashing	Major Type	Detailed Type	Log Indication in Factory Mode		Checkpoint	Possible Defective Part	Remarks
			MAIN	SUB			
Blue 1	Abnormality in the Sequence Processor	Communication error	SQ-IC	RTRY	CLK_SQ/TXD_SQ, etc.	IC3151, IC3401	SQ_IC communication not established
		Drive stop		SQNO	Check if the video sync signal is input to IC3401.	CN3001, IC3401	If the signal detection by the module microcomputer is properly performed, the unit operates on an external sync.
Blue 2	Failure in IIC communication with the module microcomputer	Busy	MD-IC	VER-HS	BUSY_SQ	IC3401	If BUSY_SQ remains high, a shutdown is generated.
		Incoherent version (hardware, software)		VER-HS	Check the model number of the DIGITAL Assy and the destination of the sequence processor.	IC3401	The written SQ_PROG is incoherent with data on the DIGITAL Assy.
Blue 3	Anomaly in RST2 power decrease	DIGITAL Assy EEPROM	RST2	EEPROM	IIC communication line of IC3156	IC3151, IC3156	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
		SENSOR Assy EEPROM		BACKUP	IIC communication line of IC3652	IC3151, IC3652	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
Blue 4	High temperature of the panel	DAC	TMP_NG	DAC	IIC communication line of IC3157	IC3151, IC3157	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
					Is the output voltage of the DC-DC converter low?	AXY1135	If RST2 does not become high after the unit is turned on, a shutdown will be generated in several seconds.
Blue 5	Short-circuiting of the speakers		AUDIO	TEMP1	The 12 V power is not output.	POWER SUPPLY Unit	Check if V + 12 V is started.
					Ambient temperature	IC3651	If TEMP1 that is read by the module microcomputer is 75 °C or higher, a shutdown will be generated.
Blue 6	Failure in communication with the module microcomputer		MODULE	TEMP1	Abnormality in the panel temperature sensor	CN3753, CN3901, JA3901	Check the connection with the SENSOR Assy.
					Speaker terminals	IC3751	Check if any speaker cable is in contact with the chassis.
Blue 7	Failure in main microcomputer 3-wire serial communication		MA-SRL	AUDIO AMP	Periphery of the cable between A2 and M8	CN3752, CN4007	Check if the AMP output is short-circuited.
					Communication line between MAIN and MOD	IC3151, IC8401	Check the communication lines (RXD_MOD/RXD_MOD/REQ_MOD).
Blue 8	Failure in IIC communication with the main microcomputer	IF microcomputer	MA-IC	IF	Periphery of the cable between D11 and M2	CN3001, CN4001	Check if cables are firmly connected.
		MULTI		MULTI	Communication line between IF and MAIN	IC8301, IC8401	Check the communication lines (TXD_IF/RXD_IF/CLK_IF/BUSY_IF/OE_IF/REQ_IF).
Blue 9	Failure in communication with the main microcomputer and unknown	AV Switch	MAIN	I/P	Communication line between IP and MULTI_M	IC8101, IC8201	Check the communication lines (EXA/EXDIO).
		RGB Switch		D_SEL	Communication line between D_SEL and MULTI_M	IC8001, IC8201	Check the communication lines (TXD_IC8/RXD_IC6/CLK_IC6/CE_IC6).
Blue 10	Failure in the fan	Analog Tuner	FAN	AV-SW	IIC communication line between AV_SW and MAIN	IC4701, IC8401	Check the communication lines (SCL_AV3/SDA_AV3 or SCL_AV/SDA_AV).
		Sub VDEC		RGB-SW	IIC communication line between RGB_SW and MAIN	IC4901, IC8401	Check the communication lines (SCL_AV3/SDA_AV3 or SCL_AV/SDA_AV).
Blue 11	High temperature of the unit	Main VDEC	TEMP2	FE1	IIC communication line between A_Tuner and MAIN	U401, IC8401	Check the communication lines (SCL_AV3/SDA_AV3 or SCL_AV/SDA_AV).
		AD/PLL		S-VDEC	IIC communication line between S_VDEC and MAIN	IC5103, IC8401	Check the communication lines (SCL_MA/SDA_MA).
Blue 12	Digital Tuner	MPX	DTUNER	MPX	IIC communication line between MPX and MAIN	IC4402, IC8401	Check the communication lines (SCL_AV3/SDA_AV3 or SCL_AV/SDA_AV).
		64K EEPROM		M-VDEC	IIC communication line between M_VDEC and MAIN	IC5101, IC8401	Check the communication lines (SCL_MA/SDA_MA).
Blue 13	Failure in the POWER SUPPLY Unit	VOLUME IC	MA-PWR	ADC	IIC communication line between ADC and MAIN	IC5301, IC8401	Check the communication lines (SCL_MA/SDA_MA).
				HDMI	IIC communication line between HDMI_RX and MAIN	IC5401, IC8401	Check the communication lines (SCL_MA/SDA_MA).
Blue 14	Failure in the fan		FAN	TXT	IIC communication line between TXT and MAIN	IC4601, IC8401	Check the communication lines (SCL_TXT/SDA_TXT).
				MA-EEP	IIC communication line between EEPROM and MAIN	IC4801, IC8401	Check the communication lines (SCL_TXT/SDA_EP).
Blue 15	High temperature of the unit	VOLUME IC	TEMP2	AUDIO	IIC communication line between VOL_IC and MAIN	IC3753, IC8401	Check the communication lines (SCL_AUDIO/SDA_AUDIO).
				AUDIO	Periphery of the cable between A2 and M9	CN3752, CN4007	Check if cables are firmly connected.
Blue 16	Failure in the fan		MAIN		Communication line between IF and MAIN	IC3301, IC8303, IC8304, IC8401	Check the communication lines (TXD_IF/RXD_IF/CLK_IF/BUSY_IF/OE_IF/REQ_IF).
					Dirt attached to the fan motor	—	Check the fan.
Blue 17	Failure in the fan		FAN		Periphery of the cable between fan and M4	CN4009	Check if cables are firmly connected.
					Periphery of the fan control regulator	IC8407	—
Blue 18	High temperature of the unit		TEMP2		Temperature sensor or its periphery	—	A shutdown is generated if TEMP2 becomes higher than 53°C
					Periphery of the temperature sensor	TH8801, CN8006	TEMP2
Blue 19	Digital Tuner		DTUNER		Periphery of the cable between T1 and M6	CN8804, CN4005	Check if cables are firmly connected.
					Failure in the system IC or its peripheral circuit	IC2000	Check for short-circuited/open communication line (M12_TXD_DT/RXD_DT)
Blue 20	Failure in the POWER SUPPLY Unit		MA-PWR				
Blue 21	Failure in the POWER SUPPLY Unit	DC-DC converter power decrease	POWER SUPPLY	M-DCDC	DC-DC converter or its periphery, RST2	IC4102, Q4106	Check if V + 3.3 V is started.
				RELAY	The 12 V power is not output, RST4	—	Check if V + 12 V is started.
Blue 22	Failure in the POWER SUPPLY Unit		POWER SUPPLY		Periphery of the cable between P8 and M2	CN4002	Check if cables are firmly connected.

5.4 INFORMATION ON SYMPTOMS THAT DO NOT CONSTITUTE FAILURE

Information on symptoms that do not constitute failure

Symptom	Cause, item to check, information
HDMI: Symptoms concerning the input format and settings	
The picture color for an INPUT 3 or 4 signal is not correct.	The color setting for INPUT 5 or 6 is not compatible with that of the output equipment. Check whether the color setting is YPbPr or RGB.
The video signal to INPUT 3 or 4 is not displayed, and a message is displayed.	A unsupported video signal is input. Example: 1080p @ 60Hz
The audio signal input to the INPUT 3 or 4 pin jack is not output.	The audio setting for INPUT 5 or 6 is "AUTO," and a video signal is not input. If the audio setting is "AUTO," to output an analog audio signal, the DVI signal must be input via a DVI-HDMI conversion cable. When the DVI equipment is connected, the analog signals are selected with the setting "AUTO."
No sound of signals to INPUT 3 or 4 is output.	The setting on the side of the HDMI output equipment is wrong. Example: Dolby Digital
MONITOR video output	
The video output signal from the MONITOR connector is deteriorated. Or when the video output signal from the MONITOR connector is recorded, its playback picture is deteriorated.	The video signal output from the MONITOR connector is Macrovision protected.
The video signal is not output when the component signal is input to INPUT 2.	The video signal is not output from the MONITOR connector when the component signal is selected.
The video signal is not output when the video signal is input to INPUT 3 or 4.	The video signal is not output from the MONITOR connector when the HDMI signal is selected.
MONITOR audio output	
The image displayed on the PDP is not synchronized with the sound from the MONITOR audio output.	The audio signal from the MONITOR connector is synchronized with the video output signal from the MONITOR connector.
DIGITAL audio output	
Playback of the signal from the DIGITAL audio output connector is possible, but recording is not possible.	The video signal output from the DIGITAL connector is copy-protected.
The video output signal from the DIGITAL connector is not synchronized with that from the MONITOR video output.	The digital audio output signal from the DIGITAL connector is synchronized with the video signal that is currently displayed, and not with the MONITOR video output.
Miscellaneous	
The no-signal off function is not activated.	The no-signal off function is effective only while a video signal is being input.
The no-operation off function is not activated.	The no-operation off function is effective only while a video signal is being input.
Power management does not function.	Power management is effective only while a signal is being input from a PC.
The AUTO SETUP function is not activated.	The AUTO SETUP function is effective only while a signal is being input from a PC.
• • • •	
Control via the SR connector is not possible.	A failure in the G-Link system or wrong connection of the cable to the SR audio connector is suspected.
The audio signal from the PC is not output.	A failure in the G-Link system or wrong connection of the cable to the PC connector is suspected.
The picture-quality setting (AV Selection) is not stored.	The picture-quality setting is stored for each input. As the setting is changed when another input is selected, the user may have a false idea that the setting is not stored.
The picture size changes arbitrary.	The Auto Size setting is set to ON (default is OFF).
The display position of the screen slightly changes every time the unit is turned on.	The orbiter function for minimizing the effects of phosphor burn is activated. As ON/OFF of this function can only be changed on the Integrator menu, turning off of this function by a user is not possible.
The video signal to the S video connector is not displayed.	Although S video input is selected on the menu, the cable is connected via a component video input connector whose function type is the same as S video input.
The video signal to the composite video connector is not displayed.	Although the composite video input is selected on the menu, the cable is connected via a component video connector or S video connector whose function type is the same as the composite video input.

SUPPLEMENT: On the video setting for HDMI

There are three types of HDMI output formats: color difference 4:4:4, color difference 4:2:2, and RGB4:4:4.

(The proportions, such as 4:4:4 and 4:2:2, represent those of the amount of data for video signal components. For example, as for color difference 4:4:4, the proportion of the amount of data as for Y, Cb, and Cr is 4:4:4.)

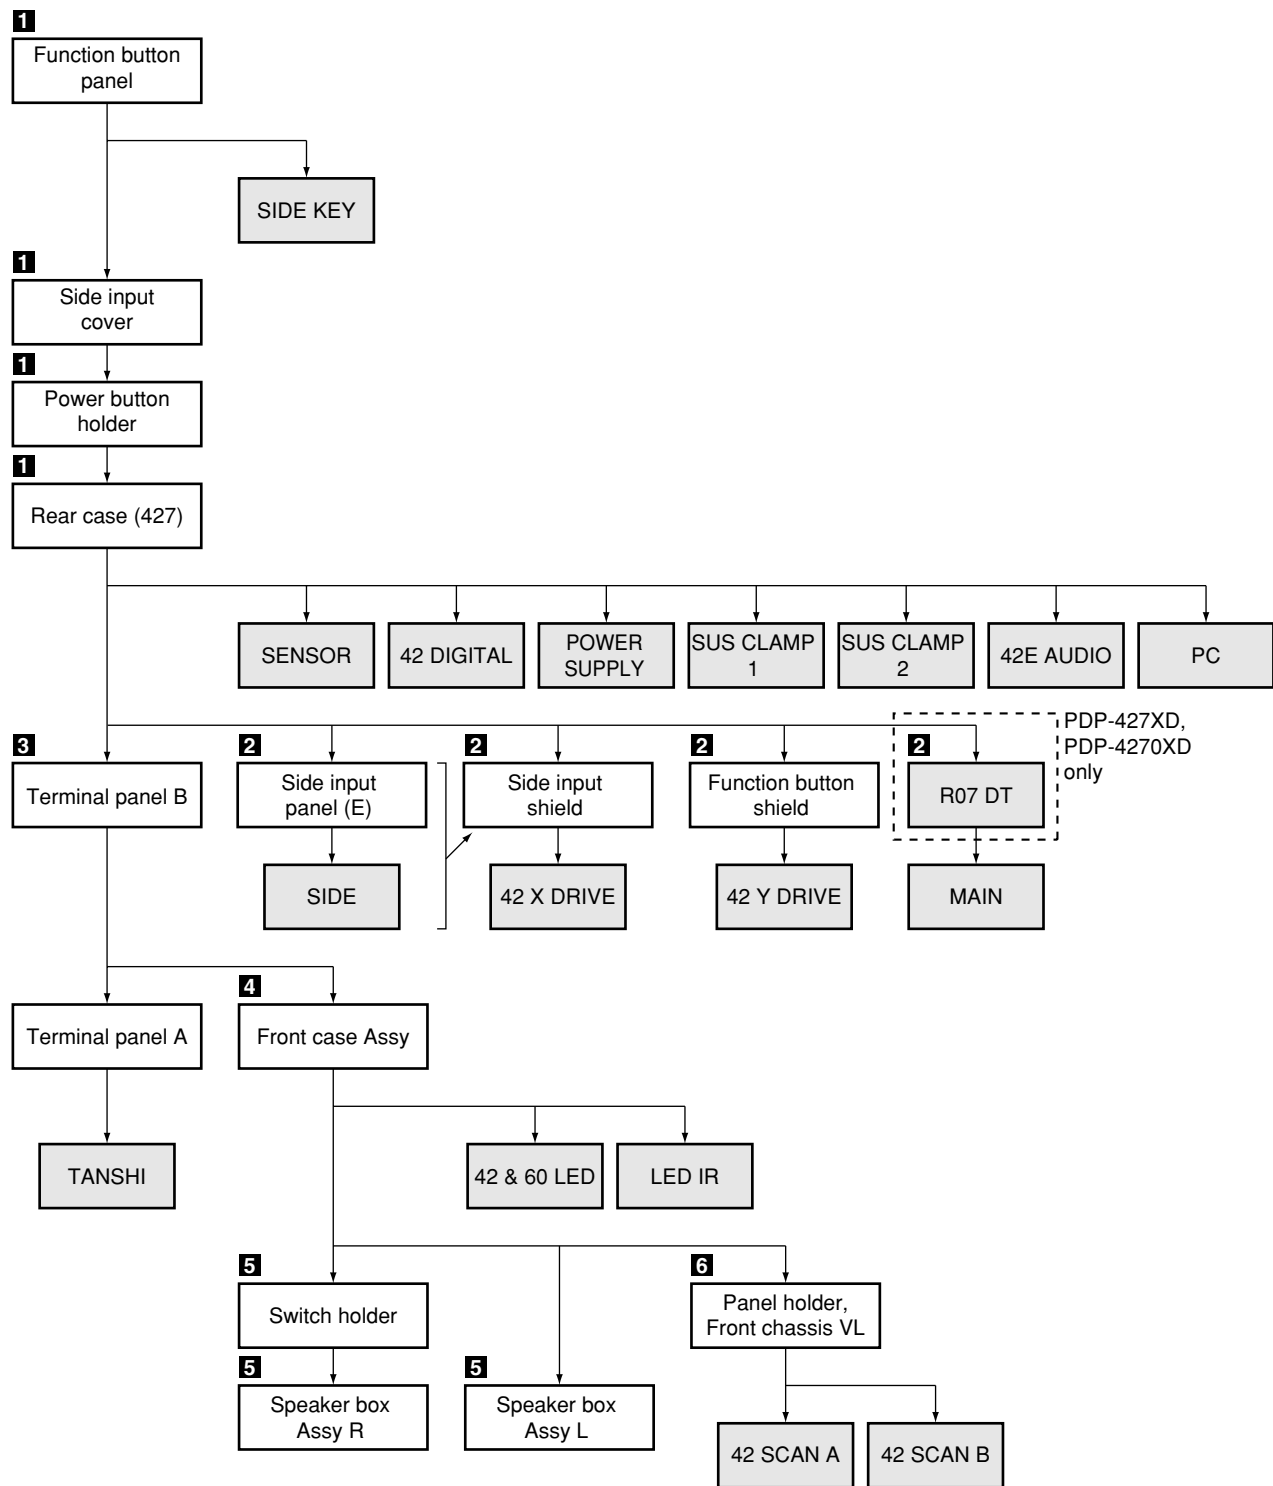

It is required to make the settings of the PDP according to the settings of the output equipment. For usual operation, however, set them to AUTO. If the color is inappropriate, make the settings manually.

In the HDMI system, video signals are coded at 24 bits per pixel and transmitted as a series of 24-bit pixels. In a case of color difference 4:4:4, Y, Cb, and Cr use 8 bits each. In a case of color difference 4:2:2, Y, Cb, and Cr use 12 bits each, but Cb and Cr are transmitted at a half sampling rate of Y. This unit is capable of processing the upper 10 bits out of 12 bits of video data. Recent high-end DVD players, such as Pioneer DV-79AVi, are capable of outputting 10-bit color-difference signals. In general, it is said that picture quality for color difference 4:2:2 format is assumed to be higher, because human eyes are more sensitive to luminance than to colors. In the case of RGB4:4:4, R, G, and B use 8 bits each.

Note: Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

Chart of removal order for the main parts and boards

It is efficient to proceed with removal of the main parts and boards in the order shown in the chart below:

A

Disassembly

1 Rear Case (427)

● Function button panel

- ① Remove the two screws.
- ② Remove the function button panel.

● Side input cover

- ③ Remove the two screws.
- ④ Remove the side input cover.

● Power button holder

- ⑤ Remove the two screws.
- ⑥ Remove the power button holder.

● Rear case (427)

- ① Remove the two protection sheets C.
- ② Remove the 23 screws. (AMZ30P060FTB)
- ③ Remove the nine screws. (TBZ40P080FTB)
- ④ Remove the four screws. (ABA1332)
- ⑤ Remove the four screws. (ABA1353)
- ⑥ Remove the one screw. (ABA1341)
- ⑦ Remove the rear case (427).

2 Access to PCB Assys

● SIDE Assy

- ① Remove the four screws.
- ② Remove the two screws.
- ③ Remove the three screws.
- ④ Remove the side input panel (E).

● 42 X DRIVE Assy

- ① Remove the two screws.
- ② Remove the side input shield with PCB.

● 42 Y DRIVE Assy

- ① Remove the two screws.
- ② Remove the function button shield with PCB.

● MAIN Assy

- ① Disconnect cables, connectors, as required.
- ② Remove the POD cover.
- ③ Remove the two screws.
- ④ Remove the two screws.
- ⑤ Remove the R07 DT Assy.

PDP-427XD,
PDP-4270XD
only

PDP-427XD

A

3 Terminal Panel B

- ① Remove the 10 screws.
- ② Remove the 10 screws.
- ③ Remove the three screws.
- ④ Remove the terminal panel B.

B

C

4 Front Case Assy

- ① Remove the one screw.
- ② Remove the two screws.

D

- ③ Pull the lower part of the Front case Assy toward you and out.
- ④ Remove the Front case Assy, by pulling it upward.

④ Front case Assy

F

5 Speaker Box Assy L and R

● Speaker Box Assy L

- ① Disconnect cables, connectors, as required.
- ② Remove the two screws.
- ③ Remove the one screw.
- ④ Remove the one screw.
- ⑤ Remove the speaker box Assy L.

● Speaker Box Assy R

- ① Remove the one screw.
- ② Remove the switch holder.
- ③ Disconnect cables, connectors, as required.
- ④ Remove the two screws.
- ⑤ Remove the one screw.
- ⑥ Remove the one screw.
- ⑦ Remove the speaker box Assy R.

A

6 Exchange of SCAN IC

- ① Loosen the jumper wire.
- ② Remove the LED IR Assy by removing the one nylon rivet.
- ③ Remove the locking wire saddle.
- ④ Remove the two screws.
- ⑤ Unhook the six hooks.
- ⑥ Remove the panel holders V1 (427) and V2 (427).

- ⑦ Remove the three screws.
- ⑧ Remove the front chassis VL (427).

Exchange

F

7. ADJUSTMENT

1. At shipment, the unit is adjusted to its best conditions. Normally, it is not necessary to readjust even if an assembly is replaced. If the adjustment is shifted or if it becomes necessary to readjust because of part replacement, etc., perform the adjustment as described below.
2. Any value changed in Service/Factory mode will be stored in memory as soon as it is changed. Before readjustment, take note of the original values for reference in case you need to restore the original settings.
3. Use a stable AC power supply.

7.1 ADJUSTMENT REQUIRED WHEN THE SET IS REPAIRED OR REPLACED

■ When any of the following assemblies is replaced

POWER SUPPLY Unit	➡	Refer to "7.4 HOW TO CLEAR HISTORY DATA".
DIGITAL Assy	➡	Writing of backup data is required. Refer to the "7.3 BACKUP WHEN THE PANEL UNIT IS ADJUSTED. "
X MAIN DRIVE Assy	➡	No adjustment required
X SUB DRIVE Assy	➡	No adjustment required
Y MAIN DRIVE Assy	➡	No adjustment required
Y SUB DRIVE Assy	➡	No adjustment required
Service Panel Assy	➡	Refer to "7.5 ADJUSTMENTS WHEN THE SERVICE PANEL ASSY IS REPLACED."
MAIN Assy	➡	Switching to SR+ from RS-232C
SENSOR Assy	➡	Writing of backup data is required. Refer to the "7.3 BACKUP WHEN THE PANEL UNIT IS ADJUSTED. "
TANSHI Assy	➡	No adjustment required
R07 DT Assy (PDP-427XD / 4270XD only)	➡	No adjustment required

7.2 ADJUSTMENT REQUIRED WHEN PART IS REPLACED

A Notes on replacing parts

For the parts described in the list below, replacement is required for the whole Assy, not only the defective part.
If any part listed below is identified as defective and needs replacement, replace the whole Assy, and make necessary adjustments after replacement.

Reason: The whole Assy must be replaced, because adjustments and data rewriting for the Assy at the level of production line are required.

PCB Assy No.	Function Name	Parts that Require Whole-Assy Replacement		
		Ref No.	Function Name	Part No.
AWW1240	42 DIGITAL Assy	IC3151	Module microcomputer	AGC1011
		IC3401	Sequence IC	PEG239A
		IC3301	Flash memory	AGC1009
		IC3156	EEPROM	BR24L04FJ-W
AWW1140	SENSOR Assy	IC3652	EEPROM	BR24L02FJ-W
AWV2318 (PDP-427XD and PDP-427XA) AWV2320 (PDP-4270XD and PDP-4270XA)	MAIN Assy	IC4603	Flash ROM	AGC1020
		IC4701	AV switch	R2S11002AFT
		IC4901	RGB switch	R2S11001FT
		IC5101	MAIN VDEC	UPD64015GM-UEU
		IC5103	SUB VDEC	TVP5150AM1PBS
		IC5301	A/D Converter	AD9985KSTZ-110
		IC5403	EEPROM	BR24L02FJ-W
		IC5404	EEPROM	BR24L02FJ-W
		IC8202	Flash ROM	AGC1019
		IC8301	Flash UCOM	AGC1016
		IC8402	Flash ROM	AGC1018

POWER SUPPLY Unit	➡	The assembly must be replaced as a unit, and no part replacement is allowed.
MAIN Assy	➡	No adjustment is required after replacement of parts other than those mentioned above.
DIGITAL Assy	➡	No adjustment is required after replacement of parts other than those mentioned above.
X MAIN DRIVE Assy	➡	No adjustment is required after replacement of parts other than those shown in the following page.
X SUB DRIVE Assy	➡	No adjustment required
Y MAIN DRIVE Assy	➡	No adjustment is required after replacement of parts other than those shown in the following page.
Y SUB DRIVE Assy	➡	No adjustment required
ADDRESS Assy	➡	No adjustment required
SENSOR Assy	➡	No adjustment is required after replacement of parts other than those mentioned above.
TANSHI Assy	➡	No adjustment required
R07 DT Assy (PDP-427XD / 4270XD only)	➡	The assembly must be replaced as a unit, and no part replacement is allowed.

Outline

Adjustment data are stored in the EEPROM (IC3156/4K) on the DIGITAL Assy in the production process. Those adjustment data are also automatically stored in the EEPROM (for backup: IC3652) on the SENSOR Assy. If the DIGITAL Assy is replaced, those adjustment data for backup can be copied from the EEPROM on the SENSOR Assy to a new DIGITAL Assy.

Backed up data

- Drive voltage adjustment value
- Hour-meter count
- Pulse-meter count
- Panel white balance adjustment value
- Serial No.
- Drive waveform adjustment value
- P-ON counter value
- PD/SD histories

How to copy backup data

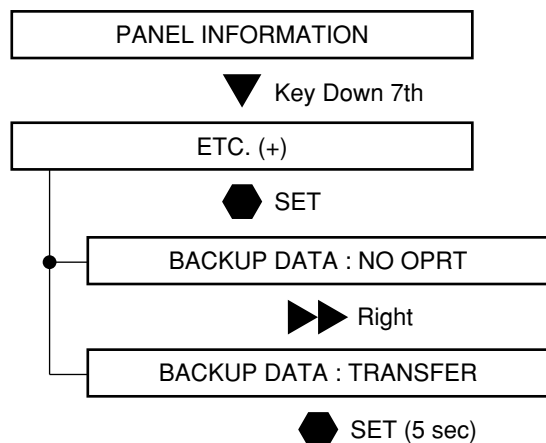

1. When the DIGITAL Assy is replaced with one for service (usual service)

Adjustment data can be restored by copying the data backed up in the SENSOR Assy to the EEPROM on a new DIGITAL Assy.

The EEPROM on the new DIGITAL Assy has no adjustment data, and the EEPROM for backup in the SENSOR Assy has adjustment data. After replacing the DIGITAL Assy, enter PANEL FACT. mode, display the PANEL INFORMATION page, then check if "NO DATA!" is set for "DIG. EEP" and "ADJUSTED" is set for "BACKUP". Then, proceed in the following steps:

(1) Copying, using the Factory menu

- ① Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
- ② Turn on the power, using the remote control unit, then enter Panel Factory mode.
Copy the backup data, as shown in the figure below.

- ③ Turn the power off.
 - After the DIGITAL Assy is replaced with one for service, be sure to check if "NO DATA!" is set for "DIG. EEP" on the PANEL INFORMATION page of the PANEL FACT. mode.
 - If copying of the backup data fails in the above procedure, the red LED lights, and the blue LED flashes, as a warning that no backup data were copied.
 - If both the DIGITAL and SENSOR Assys are to be replaced, first replace the SENSOR Assy, turn the unit on and back off again, then replace the DIGITAL Assy.

(2) Copying, using the RS-232C commands

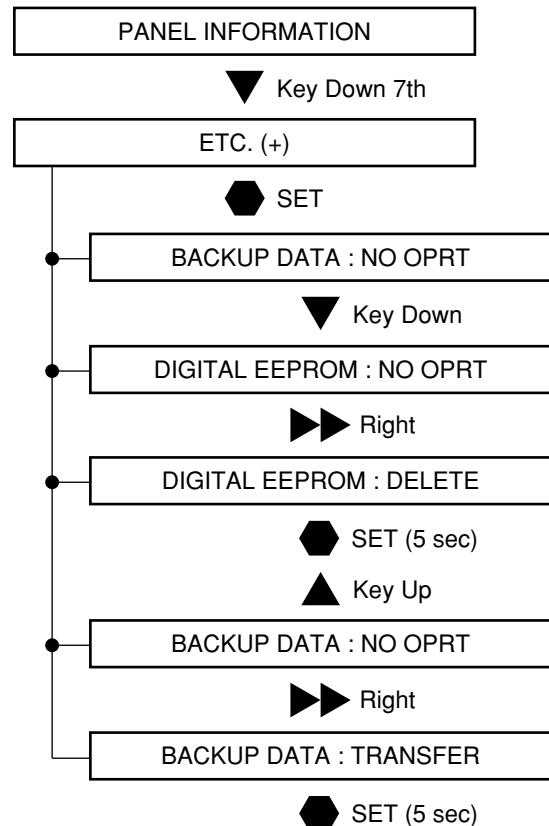

- ① Switch the RS-232C/SR+ setting to RS-232C so that RS-232C commands can be received.
- ② Turn on the unit, using the remote control unit or by issuing the PON command. Then issue the FAY command.
- ③ Issue the BCP command to transfer the data stored in the EEPROM for backup.
- ④ Turn the power off.

2. When a secondhand DIGITAL Assy that had been mounted in another product is to be reused

As adjustment data for another product are already stored in the secondhand DIGITAL Assy, first delete those data then copy the backup data stored in the EEPROM on the SENSOR Assy.

(1) Copying, using the Factory menu

- ① Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
- ② Turn on the power, using the remote control unit, then enter Panel Factory mode.
Copy the backup data, as shown in the figure below.

- ③ Turn the power off.

Note:

If the secondhand DIGITAL Assy is mounted in the product then the unit is turned on then back off again, the data in the EEPROM on the DIGITAL Assy are copied over the EEPROM in the SENSOR Assy. Thus the backup data can never be restored. During the first power-on after the DIGITAL Assy is replaced, be sure to enter Factory mode to copy the backup data. Or, before removing the secondhand DIGITAL Assy from the original product, delete the adjustment data on it, using the Factory mode (DIGITAL EEPROM: DELETE), mount it to the product to be repaired, then copy the data from the backup EEPROM.

(2) Copying, using the RS-232C commands

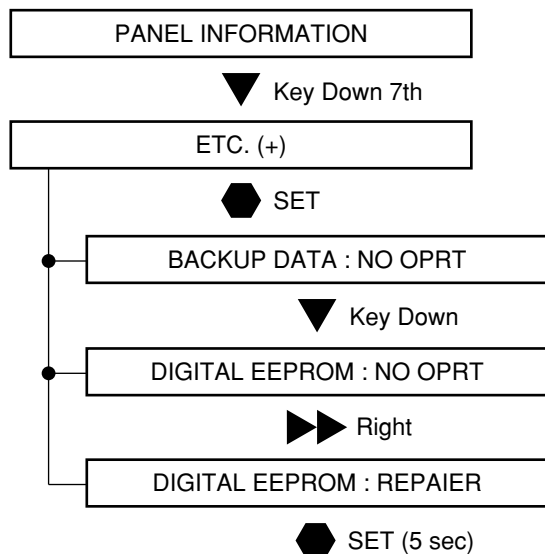

- ① Switch the RS-232C/SR+ setting to RS-232C so that RS-232C commands can be received.
- ② Turn on the unit, using the remote control unit or by issuing the PON command. Then issue the FAY command.
- ③ Issue the UAJ command to delete data stored in the EEPROM on the DIGITAL Assy.
- ④ Issue the BCP command to transfer the data stored in the EEPROM for backup.
- ⑤ Turn the power off.

3. In a case where normal backup data are not stored in the backup EEPROM because the EEPROM on the DIGITAL Assy is defective, etc., and where manually adjusted values are to be applied to the product

Note: In this section, it is assumed that settings for various items have been completed, using Factory menu or RS-232C commands.

(1) Method using the Factory menu

- ① Set various setting/adjustment values.
- ② Proceed in the following steps.

- ③ Turn the power off.

Note:

When a DIGITAL Assy with an EEPROM in which adjustment data are stored is mounted, this step is not required after manual adjustment. ("DIGITAL EEPROM: REPAIR" is not indicated.)

(2) Method using the RS-232C commands

Issue the FAJ command.

7.4 HOW TO CLEAR HISTORY DATA

■ Clearance of various logs after the Assys are replaced

Besides adjustment data, data on accumulated power-on time and logs on defective parts of the product are backed up. Some of those data must be cleared after the Assys are replaced for service.

(1) Clearance of logs, using the RS-232C commands

Item	Content	When the Panel is replaced	When the POWER SUPPLY Unit is replaced	When the Other parts is replaced	RS-232C Commands
Hour-meter	Accumulated power-on time	Must be cleared	No need to be cleared	No need to be cleared	CHM
Pulse-meter	Accumulated number of pulses emitted	Must be cleared (mandatory)	No need to be cleared	No need to be cleared	CPM
Shutdown history	Cause of an SD and hour-meter count	Must be cleared	No need to be cleared	No need to be cleared	CSD
Power-down history	Cause of an PD and hour-meter count	Must be cleared	No need to be cleared	No need to be cleared	CPD
Power-on counter	Relay-on count	No need to be cleared	Must be cleared (mandatory)	No need to be cleared	CPC
MAX TEMP	Historical max. temperature	Must be cleared	Must be cleared	Must be cleared	CMT

Notes:

- As the pulse-meter count is used for each correction function, it must be cleared when an Assy relevant to correction functions is replaced.
- When clearing logs, using the RS-232C commands, first enter Factory mode (by issuing FAY or PFY), then issue the corresponding command.

(2) Clearance of logs, using the Factory menu

① Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.

② Turn on the power, using the remote control unit, then enter Panel Factory mode.

Delete various logs, as shown in the figure below.

③ Turn the power off.

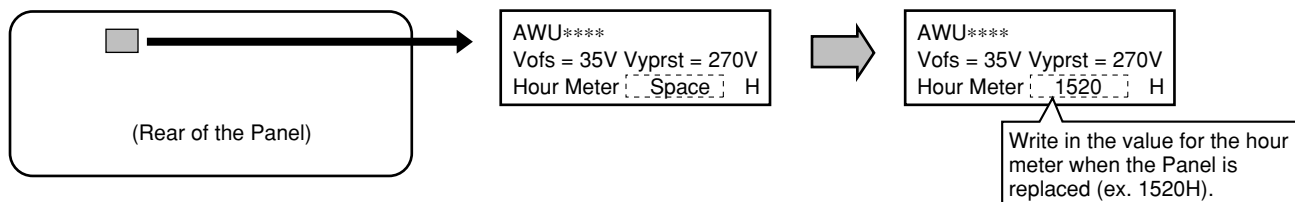

7.5 ADJUSTMENT WHEN THE SERVICE PANEL ASSY IS REPLACED

When the Panel Assy is replaced with one for service, the following adjustments are required:

■ Adjustments of Vofs voltage and Vyprst voltage

Enter the reference adjustment values for the Vofs voltage and Vyprst voltage that are written on the label attached to the panel for service.

Note: Enter the values, using an RS-232C command or the Factory Menu.

Using an RS-232C command

Enter a "PFY" command with Factory mode ON.

Convert the adjustment voltage values written on the label attached at the rear of the Panel to an input command, referring to the conversion chart. (See the next page.)

- Reference adjustment of the Vofs voltage: Ex. "Vofs = 35" → (Check the conversion chart.) Enter "VOF112."
- Reference adjustment of the Vyprst voltage: Ex. "Vyprst = 270 V" → (Check the conversion chart.) Enter "VRP078."

Using the Factory Menu

	1	5	10	15	20	25	30	32
1	PANEL FACT.	VD1-11601-NTV-EHB7						
								[TBL1/60VS]
5								
10								
15	PANEL-1 ADJ (+)							
16								

	1	5	10	15	20	25	30	32
1	PANEL FACT.	VD1-11601-NTV-EHB7						
	PANEL-1 ADJ							[TBL1/60VS]
5								
10								
15	VOL RST P <=>							: 058
16								

Select the main item "PANEL FACT." by pressing the MUTE key then enter Panel Factory mode by pressing the SET key.

Using the ▲/▼ keys, select "PANEL-1 ADJ" then press the SET key to enter the next lower nested layer.

Select "VOL-OFFSET" or "VOL RST P" then enter a command value converted from the voltage value, using the ◀/▶ keys.

■ Clearing data on various histories of the Panel, such as those on the hour meter

- It is necessary to clear the data on the hour meter, etc. to match them to the actual driving hours of the Panel.
- It is also necessary to clear the data on SD and PD, because the accumulated power-on time when a shutdown or power-down occurred is recorded.

Note: Clear the values, using an RS-232C command or the Factory Menu.

There are two types of hour meters. Do not take the MTB hour meter for the hour meter.

Using an RS-232C command

To acquire the accumulated power-on time of the product itself, use the "QS2" of RS-232C command.

1. To clear the data on the hour meter (for the Panel) : CHM
2. To clear the data on the pulse meter : CPM
3. To clear the data on the SD history : CSD
4. To clear the data on the PD history : CPD

Using the Factory Menu

See "7.4 HOW TO CLEAR HISTORY DATA."

8. SERVICE FACTORY MODE

8.1 OUTLINE OF THE SERVICE FACTORY

8.1.1 SERVICE FACTORY MODE TRANSITION CHART

8.1.2 HOW TO ENTER/EXIT SERVICE FACTORY MODE

■ How to enter Service Factory Mode

By using a remote control unit for servicing)

- Remote control unit for servicing : Press [FACTORY1] key.

By issuing RS-232C commands)

- During normal Standby mode : Issue [PON] then [FAY].
- During normal operation mode : Issue [FAY].

■ How to exit Service Factory Mode

By using a remote control unit for servicing)

- Remote control unit for servicing : press [FACTORY1] key.
- Remote control unit supplied : press [HOME MENU] key.

By issuing RS-232C commands)

- Issue [FAN].

8.1.3 OPERATION OF SERVICE FACTORY MODE

■ Functions whose setting are set to OFF

No.	Function	Remarks
1	2-Screen Operation	Input function set on the main side is selected
2	FREEZE	
3	Mask Control	MTB/MB is none. It becomes processing on the PANEL side.
4	ORBITER	Central value operation

■ User data

User data will be treated as follows :

- User data on picture-quality and audio-quality adjustments are not reflected, and factory-preset data are output (user data will be retained in memory). When the unit enters Service Factory mode, the current audio-quality adjustment data will be still be retained in memory.
- As to data on various settings, user data will be applied to the items that are associated with signal format change (screenize switching, etc).
- Data on screen (i.e., screen position; meaning clock dividers, and not including data on screen size). Are reset to the default values (data stored in memory will be retained). Screen size will be retained.

A

SR/R Keys	Basic Functions	Remarks
MUTING	Switching the main items.	Shifting to the next main item (top).
↓ (DOWN) (Note1)	Switching the subtitled items.	Shifting downward to the next subtitled item.
↑ (UP) (Note1)	Switching the subtitled items.	Shifting upward to the next upper layer.
← (LEFT) (Note1)	Decreasing the adjustment value.	Decreasing the adjustment value.
→ (RIGHT) (Note1)	Increasing the adjustment value.	Increasing the adjustment value.
ENTER/SET (Note1)	Switching the layers.	Shifting downward or upward to the next lower or upper layer.
INPUT	Selecting INPUT.	Shifting the INPUT to the next function.
INPUTxx (Note1)	Selecting INPUT.	Switching the INPUT to xx. (xx=1 to 6 etc)
CH+/P+	Increasing the channel number.	Advanving
CH-/P-	Decreasing the channel number.	
Numeric Keys	Function: TV	Function: TV (previously selected channel number is selected)
POWER	Power OFF.	Turning the power off.
FACTORY	Factory OFF (Factory mode)	In Factory mode, turning Factory mode off.
	Factory ON (Non-Factory mode).	In Non-Factory mode, turn Fuctory mode on.
HOME MENU (Note1)	Menu ON.	In Factory mode, turn Factory mode off.
VOLUME+	Volume UP.	Increasing 10 the adjustment value. (PANEL FACTORY)
VOLUME-	Volume DOWN.	Decreasing 10 the adjustment value. (PANEL FACTORY)
DRIVE ON/OFF (Note2)	Drive Mode OFF.	Turning Drive mode off.
INTEGRATOR (Note1)	INTEGRATOR MENU ON.	Enter INTEGRATOR MODE.

(Note 1) A pertinent key that exists in the service remote control becomes effective only in the factory mode and the integrator mode.
Please use the remote control of the attachment when you normally operate it in the mode (home menu operation etc.).

(Note 2) When ten seconds have passed since the [DRIVE ON/OFF] key was pressed at the standby, it becomes invalid.
Please press [POWER] key from the [DRIVE ON/OFF] key pressing within ten seconds when you do power supply ON while driven OFF.

8.2.1.4 TEMPERATURE

A present temperature and the FAN rotation are displayed.

If either [←] key or [→] key is pressed, the display data is refreshed.

B

• Display/Meaning

TEMP1 : The temperature of the sensor on the panel side is displayed by the centigrade.

TEMP2 : The temperature conversion display is done with 10bit the A/D input value of Main uCON 76 pin (AN0). It is displayed by both the centigrade (C) and 8bit A/D value.

(Remark: When temperature (C) of the sensor becomes more than a specified temperature, the shutdown start of processing.)

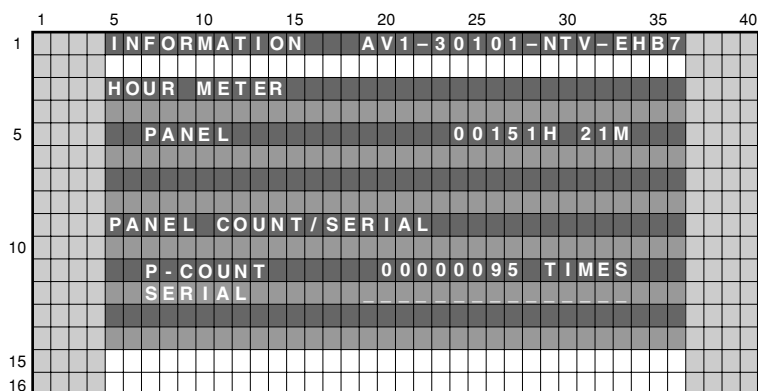

FAN : The value of the Fan rotating state is displayed.

STOP : stopped, LOW: slow speed, HIGH: high speed.

C

8.2.1.5 HOUR METER

D

E

• Display/Meaning

Meaning	Item Name	Display Example	Corresponding RS-232C Command
HOUR METER (PANEL)	PANEL	00151H 21M	QIP
POWER ON COUNTER	P-COUNT	0000095 TIMES	QIP
SYSTEM SERIAL	SERIAL		QIP

Note 1: The SYSTEM SERIAL displays only FHD. It corresponds by sticking the seal in G7 model.

Note 2: The PANEL-side's HOUR METER/P-COUNT acquires information from the PANEL-side.

Regular

Displays input signal status of VDEC terminal.

Device	SA	Context
MVDEC	00h	Signal distinction result 1
	01h	Signal distinction result 2
	02h	Flag detection output
	15h	Noise level distinction 1
	16h	Noise level distinction 2
	17h	Non-standard signal detection
	18h	Subcarrier signal detection
	19h	ACC data output
	1Ah	ACC information output
	1Dh	Input signal mode
SVDEC	88h	Status register 1 (TV/VCR status)
	89h	Status register 2 (Macrovision detection, etc.)
	8Ah	Status register 3 (Front-end AGC gain value)
	8Bh	Status register 4 (Subcarrier to horizontal (SCH) phase)
	8Ch	Status register 5 (Signal distinction)

Displays digital broadcast signal information and status upon receiving digital signal.

A

■ Operation Items

This is the menu screen for the adjustment of the panel. Data acquisition and value adjustment can be performed for the following items:

No.	Indication	Description of functions
8.2.2.1	PANEL INFORMATION	Data, such as the version of the microcomputer of the panel, product serial number, and statuses of memories for adjustment values for the main unit and for backup, are displayed.
8.2.2.2	PANEL WORKS	Operation data, such as accumulated pulse-meter count, accumulated hour-meter count, accumulated power-on count, and the temperature detected by the sensor, are displayed.
8.2.2.3	POWER DOWN	The power-down history is displayed, with the hour-meter values that indicate the hour values when power-downs occurred.
8.2.2.4	SHUT DOWN	The shutdown history is displayed, with the hour-meter values that indicate the hour values when shutdowns occurred.
8.2.2.5	PANEL-1 ADJ (+)	Settings of the driving pulse timing and driving voltage can be performed.
8.2.2.6	PANEL-2 ADJ (+)	White balance and ABL (power consumption) for the panel can be set.
8.2.2.7	PANEL REVISE (+)	The level for correction of panel degradation can be set.
8.2.2.8	ETC. (+)	Copying of backup data and clearance of various data can be performed.
8.2.2.9	RASTER MASK SETUP (+)	The mask indication (RASTER) can be set and indicated.
8.2.2.10	PATTEN MASK SETUP (+)	The mask indication (PATTERN) can be set and indicated.
8.2.2.11	COMBI MASK SETUP (+)	The mask indication (COMBI) can be set and indicated.

■ Details of indications in each layer

- In the following examples, GUI images for a 50-inch model are indicated. Although the display areas for the menu for 42-inch and 50-inch models are different, the items to be displayed are the same.

8.2.2.1 PANEL INFORMATION

- Data, such as the version of the microcomputer of the panel, product serial number, and statuses of memories for adjustment values for the main unit and for backup, are displayed. No other layers are nested below this layer, and there are no adjustment items.

		1	5	10	15	20	25	30	32

Display area for 50-inch model

■ Key operation

- <DOWN> : Shifting to PANEL WORKS
- <UP> : Shifting to COMBI MASK SETUP (+)
- <L/R> : Updating displayed information

■ Display items:

- MODULE : The version of data written in the Module microcomputer (IC3151) is indicated.
- SEQ-PRG : The version of data written in the Sequence Program Storage Memory (IC3301) is indicated.
- VD-SEQ : The Drive Sequence version for Video mode is indicated.
- PC-SEQ : The Drive Sequence version for PC mode is indicated.
- SERIAL : The serial number of the module is indicated.
- DIG.EEP : The adjusted status of the EEPROM that is mounted on the DIGITAL Assy is indicated.
- BACKUP : The adjusted status of the EEPROM for backup that is mounted on the SENSOR Assy is indicated.

8.2.2.2 PANEL WORKS

- Data on operations, such as the accumulated pulse-meter counts, hour-meter count, power-on count, and temperature detected by the sensor, are sent back. No other layers are nested below this layer, and there are no adjustment items.

		1	5	10	15	20	25	30	32

■ Key operation

- <DOWN> : Shifting to POWER DOWN
- <UP> : Shifting to PANEL INFORMATION
- <L/R> : Updating displayed information

← Temperature unit is " °C (Centigrade) ".

■ Contents of the Display item

- PM-B1 to B5: The accumulated pulse-meter counts for the 5 blocks on the screen are indicated. (the lowest-order digit represents millions of pulses.)
- HR-MTR: The hour-meter value (accumulated power-on hours) is indicated.
- P-COUNT: The accumulated power-on count is indicated.
- TEMP1: The current panel temperature and the historical maximum temperature recorded in memory are indicated. The range of temperature indication is from -50.0 to +99.9. (The temperature unit is " °C (Centigrade) ".)

8.2.2.3 POWER DOWN

- The power-down history is displayed. The last most 8 power-down histories are displayed with the hour-meter values that indicate the hours when power-downs occurred. No other layers are nested below this layer, and there are no adjustment items.

8.2.3 OPTION

Operation item

No.	Function	Content	RS2-32C
1	EDID WRITE MODE ⇔	DISABLE ⇔ ENABLE	----
2	CH PRESET ⇔	USER ⇔ FACTORY	----

8.2.3.1 EDID WRITE MODE

Exclusively used for production line.

8.2.3.2 CH PRESET

Exclusively used for production line.

8.2.4 INITIALIZE

Operation item

No.	Function	Content	RS2-32C
1	SYNC DET (+)	Exclusively used for technical analysis.	----
2	SG MODE ⇔	Paired SG_MODE with SG_PATTERN. Select SG Route.	----
3	SG PATTERN ⇔	Paired SG_MODE with SG_PATTERN. Select SG Pattern.	----
4	SIDE MASK LEVEL (+)	Configure the color of the side mask.	BSL, GSL, RSL
5	FINAL SETUP (+)	Initialize flash memories on virgin product status	FST
6	CVT AUTO ⇔	Exclusively used for technical analysis.	----
7	HDMI INTR POSITION (+)	Exclusively used for technical analysis.	----

8.2.4.1 SYNC DET (+)

Exclusively used for technical analysis (details omitted).

8.2.4.2 SG MODE

SG MODE (SG's route selection) / SG PATTERN (signal pattern selection) are used as pair.

In SG MODE, select the SG route and then select the SG pattern to be sent by the selected route.

In SG MODE, make sure to select the route first.

Operation item

No.	Display	Content
1	SG OFF	SG Mode is OFF.
2	DIG MVDEC YCBCR	MAIN VDEC: YCbCr (Digital output mode)
3	ANA MVDEC Y	MAIN VDEC: Y (Analog output mode: SG VDEC return setting)
4	ANA MVDEC RGB	MAIN VDEC:RGB
5	ANA SVDEC Y	SUB VDEC:Y
6	ANA AD YCBCR	AD: YcbCr (Analog output to the RGB SW)
7	ANA AD RGB	AD: RGB (Analog output to the RGB SW)

8.2.4.3 SG PATTERN

Operation item

No.	Display	SG Pattern (Brightness IRE Level/Color)	No.	Display	SG Pattern (Brightness IRE Level/Color)
1	COLOR BAR1	Colorbar (75%)	11	RASTER4	Raster (75% Green)
2	COLOR BAR2	Colorbar (100%)	12	RASTER5	Raster (75% Magenta)
3	RAMP1	Ramp (100% white)	13	RASTER6	Raster (75% Red)
4	RAMP2	Ramp (100% Yellow)	14	RASTER7	Raster (75% Blue)
5	RAMP3	Ramp (75% Green)	15	RASTER8	Raster (– % Black)
6	RAMP4	Ramp (75% Red)	16	10STEP1	10STEP (100% white)
7	RAMP5	Ramp (75% Blue)	17	10STEP2	10STEP (100% Yellow)
8	RASTER1	Raster (100% White)	18	10STEP3	10STEP (75% Green)
9	RASTER2	Raster (75% Yellow)	19	10STEP4	10STEP (75% Red)
10	RASTER3	Raster (75% Cyanide)	20	10STEP5	10STEP (75% Blue)

Notes when using SG MODE/SG PATTERN

- During factory mode, choose the correct route when changing.
- Basically, during VDEC SG output, make sure to connect SG output's Y or G to the AVI input terminal of VDEC.
- During SG MODE, turn off the blanking 50IRE setup function.
- During VDEC SG output, set the YC separation setting to NTSC.
- It is possible to use ANALOG OUT MODE together during DIGITAL OUT MODE.
The Main VDEC can output digital color difference, in which colors will appear.
But the route to VDEC input cannot be analysed therefore care should be taken when using.
Depending on the situation, please use the proper analog/digital output.
- The SG MODE outputs color difference and RGB only. Therefore, in the case of CVBS, only the Y input is used resulting in no color.
This is not a damage result nor error.
- The SG MODE's ANA AD RGB (route to input 525i to AD by RGB) as a set's route, the setting does not exist. For this account the latter part from MVDEC does not have set values, resulting in having funny colors in colorbar, the brightness changes after switching, etc.
This is not a damage result nor error.
- Depending on MVDEC's part version, ANA_MVDEC_YCBCR may not display colors.

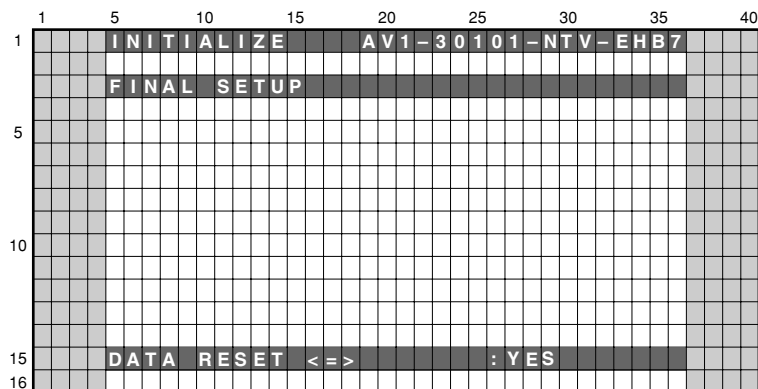

8.2.4.4 SIDE MASK LEVEL

To configure sidemask's R, G, B level (To adjust the values, input signal is required).

No.	Display	Content	RS-232C
1	R MASK LEVEL ⇔	Adjust Side Mask R (Adjustable range: 000 to 255)	RSL
2	G MASK LEVEL ⇔	Adjust Side Mask G (Adjustable range: 000 to 255)	GSL
3	B MASK LEVEL ⇔	Adjust Side Mask B (Adjustable range: 000 to 255)	BSL

8.2.4.5 FINAL SETUP

- To reset each memory value to factory default values. Factory command is "FST".
- When the configuration is set to <NO> and the [SET] key is pressed, no action is taken and the menu returns to previous screen.
- When the configuration is set to <YES> and the [SET] key is pressed for 5 seconds, the reset action executes.

8.2.4.6 CVT AUTO

Exclusively used for technical analysis (details omitted).

8.2.4.7 HDMI INTR POSITION (+)

Exclusively used for technical analysis (details omitted).

9. RS-232C

9.1 OUTLINE OF RS-232C COMMAND

9.1.1 PREPARED TOOLS

It is necessary to prepare the following one to use 232C command.

- PC
- Application for control
- 232C cable (straight)
- * It is likely not to move correctly in Win 98 faction/Me and Win for foreign countries.
- * The setting of the Com port cannot be communicated if it doesn't do correctly.
(Please follow a set explanation of PC in the Com port)

9.1.2 USING RS-232C COMMANDS

For the PDP-4270XD, PDP-4270XA, PDP-427XD and PDP-427XA series Plasma Displays, the circuitry is structured as shown in the diagram below to support the SR+ system. Controlling with either the SR+ system or RS-232C commands can be selected.

As the SR+ system is selected at shipment, to control with RS-232C commands in servicing it is necessary to switch the paths. After servicing, be sure to return the setting to the SR+ system.

■ Rough diagram of switching between SR+ and RS-232C (STEP-UP Model Only)

■ How to switch SR+/RS-232C (STEP-UP Model Only)

There are "How to switch SR+/RS-232C by remote control in the Standby Mode" and "How to switch SR+/RS-232C by remote control in the INTEGRATOR MENU" as a Method

- ① To select SR+/RS-232C by remote control in Standby Mode.
 - During Standby mode, hold the keys other than the [POWER] key on the remote control, the following operation is done within 10 seconds.

To select from SR+ to RS-232C/To select from RS-232C to SR+.

 - During standby mode, hold the [VOLUME+ (or -)] key on the remote control unit pressed for 3 to 10 seconds.
→Then within 3 seconds after the key is released, hold the [2-screen] key released, use the [SET (ENTER)] key on the remote control unit to set to RS-232C (the baud rate last selected is chosen) or the [HOME MENU] key to set to SR+.
 - During IF Standby mode (once 10 seconds or more has passed after the LED goes dark during communication), the first keypress may not be accepted. In such a case, for a key operation, first press any key other than the [POWER] key and [CH] keys, then the desired key.
 - At the switch SR+/RS-232C, the LED will be blinked on the fixed time.
- ② To select SR+/RS-232C in the INTEGRATOR MENU.
 - How to enter INTEGRATOR MENU.
During standby mode, press the [Home Menu] key, and then press the [POWER] key within 3 seconds. During factory mode, hold the [INTEGRATOR] key.
 - In INTEGRATOR MENU, there is a OSD where SR+ (or RS-232C) is turned on/off, and it switches on the screen.

9.1.3 COMMAND PROTOCOL

■ Communication protocol : Asynchronous serial communication by RS-232C

Start bit length : 1 bit
 Data width : 8 bit (ASCII codes/There is no distinction between the capital letter and the small letter)
 Parity : None
 Stop bit length : 1 bit
 Baud rate : 9600 bps (Fixed)

■ Regulating function

Direct numerical value effective: The adjustment value can be set directly by transmitting the figure to the mark of the command.

■ Data format

The control signal format sent from the user side controller is as follows. When the transmission data is completed STX (02 (Hex)), the command of ETX (03 (Hex)) is arranged when beginning to communicate. And, ID, the command, and the parameter are arranged between those. Data is assumed to be ASCII form alphanumeric character. Neither the capital letter nor the small letter are distinguished.

• Only for the command

STX	ID	Command	ETX
0x02	**	□□□	0x03

• When you accompany setting/adjustment data

STX	ID	Command	Parameter	ETX
0x02	**	□□□	△△△	0x03

■ Command processing

When the command is input, the command processing begins processing.

ID is assumed to be 2 asterisk "**".

■ Reception confirmation

The module microcomputer judges right or wrong for the command received from the main side.

If it is an effective command, processing is executed. And, the reply of the received command is done when entering the following state of the command standby after processing is completed.

The replying data replies data that deletes the ID code from the reception command by the capital letter.

• When you accompany setting/adjustment data

Send data to PC

STX	ID	Command	Parameter	ETX
0x02	**	□□□	△△△	0x03

Receive data

STX	Command	Parameter	ETX
0x02	□□□	△△△	0x03

• Only for the command

Send data to PC

STX	ID	Command	ETX
0x02	**	□□□	0x03

Receive data

STX	Command	ETX
0x02	□□□	0x03

In this case, "ERR" replies if it is a command of the uncorrespondence.

The command replies "XXX" when processing on status cannot be executed even if it is effective.

• For an Invalid command

Send data to PDP system

STX	ID	Command	ETX
0x02	**	□□□	0x03

Receive data

STX	Command	ETX
0x02	ERR	0x03

• For the command that cannot be executed on status

Send data to PDP system

STX	ID	Command	ETX
0x02	**	□□□	0x03

Receive data

STX	Command	ETX
0x02	XXX	0x03

■ Processing in the case of an error

When the communication error occurs from STX between ETX, the processing of a pertinent command is discontinued, and the reception buffer is cleared. When STX is received, the command reception processing keeps storing the transmitted character string in the register.

And, the character string placed by the ETX reception between STX-ETX is interpreted as a command.

Single functional command

The command to which operation is concluded only by command. The command parts are 3 characters.

Adjustment command and adjustment value

- The command to which value of parameter is changed attended with adjustment value. The command parts are 3 characters.
- The adjustment value is the numeric character data of the decimal number 3 characters. It is made the range of 000-999. The range that can be adjusted is different according to the function to adjust (It is noted that then, it is not uniformly to 999).

- * When the received command exceeds the range where the adjustment value can be adjusted, "XXX" is transmitted.
- * When the same adjustment value is continuously transmitted two times or more, "XXX" doesn't reply, though it is an invalid command. It's overwritten, and ACK that deletes ID replies.

Set command and Set value

- The command to which set value of parameter is changed attended with set value. The command parts are 3 characters.
- Set values are three characters. The first character is fixed to "S".
2 remainder characters are assumed to be assumption S00-S99 as the decimal number.

- * When the received command doesn't exist as a set value, "XXX" is transmitted.
- * When the same set value is continuously transmitted two times or more, "XXX" doesn't reply, though it is an invalid command. It's overwritten, and ACK that deletes ID replies.

State acquisition command

- The command that reports on state of operation and set value, etc. to system side.
- The content that corresponds by the kind of the command is read from the memory, when the command is received from the system side and it replies.
- The command parts are three characters. The first character is fixed to "Q". It sets since the second character according to the content of information.
- The reply data is transmitted adding various data that converts the received command and ASCII code and the checksum of the data. Because the content of the reply changes according to the kind of the "QUEST command", the data length follows an individual, individual specification.

A ■ Adjustment assistance command

The Adjustment Assistance Command is combined and used with the Adjustment Command.

- The Adjustment Command + Adjustment Assistance Command ⇒ It addition/subtracts it from a present adjustment value.

Note: When the received command exceeds the range of the adjustment value, it changes to MAX/MIN.

- The adjustment command immediately before is made efficacy when only the adjustment command (addition/subtraction command) is received alone after the adjustment command receptions completed, and it makes it to the value addition/subtracted from a present adjustment value. However, it applies to the command when other commands are received.

- Kind of Adjustment Assistance Command (addition/subtraction command)

UP1 to UP9, UP0, UPF: 1 to 10 is added to a setting value.

UPF: It makes it to the maximum value ("VOL" command).

DW1 to DW9, DW0, DWF: 1 to 10 is subtracted a setting value.

DWF: It makes it to the minimum value ("VOL" command).

FWD: One Preset CH is previously advanced ("CHN" command).

REV: One Preset CH is returned in the front ("CHN" Command).

Send data to PDP system

STX	ID	Command	Subcommand	ETX
0x02	**	VOL	UP1	0x03

Receive data

STX	Command	Subcommand	ETX
0x02	VOL	UP1	0x03

9.2 LIST OF RS-232C COMMANDS

RS-232C commands can be used in Service Factory mode. Before using RS-232C commands, it is necessary to change the factory presetting. See "9.1 OUTLINE OF THE RS-232C".

[Note ; If you want to see version information (ex. QS1, QS6, Factory, Menu), Please see 10 seconds after starting.]

■ RS-232C command list

Command Name		Function	Active U-com		Last Memory	Effective only in Factory mode	Remarks
			MDU	MTB			
A

R	RegularA

18: MTB/MB Product Form	
S	System model
B	One body model (SX)
M	Monitor (FHD)

19 to 23: MTB/MB-side's information	
IF uCON	Common version of IF microcomputer
Main uCON	Common version of Main microcomputer
Main uCON-Boot	Boot version of Main microcomputer
Multi-prs	Common version of Multi-processor program
Multi Prs-Boot	Boot version of Multi-processor program

9.3.2 ACQUISITION OF PANEL OPERATION DATA ••• [QS2]

The command QS2 is for acquiring data on the panel's operational information.

Command Format	Effective Operation Modes	Function	Remarks
[QS2]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+23(DATA)+2(CS)= 28 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS2
1	Notification of mode shifting to STB	1 byte	1
2	Flag for adjustment of the main unit	1 byte	0
3	Flag for adjustment-data backup	1 byte	0
4	"1st PD" data	1 byte	0
5	"2nd PD" data	1 byte	0
6	Still picture detection	1 byte	0
7	Reserved	2 byte	**
8	Temperature data (TEMP 1)	3 byte	128 (*1)
9	SD main data	1 byte	0
10	SD sub data	1 byte	0
11	Operation status induced by SD	1 byte	0
12	Data from the hour meter	8 byte	00000259 (*2)
13	MASK indication	1 byte	0
CS		2 byte	4A

Note : (*1) The unit scale is centigrade. The data is A/D value from the thermal sensor.

(*2) "00000259" of "Data from the hour meter" means 2 hours 59 minuts.

6: Still picture detection	
0	Normal screen
1	Still picture

9: SD main data	
0	No SD
1	SQ-IC
2	MDU-IIC
3	RST2
4	TEMP

10-1: SD-Sub (SQ-IC)	
0	No SD-Sub data
1	Communication error
2	Drive stop
3	BUSY
6	Version mismatching

10-2: SD-Sub (IIC)	
0	No SD-Sub data
1	EEPROM
2	BACKUP
3	DAC

10-3: SD-Sub (TEMP)	
0	No SD-Sub data
1	TEMP1
2	Reserved

11: Operation status induced by SD	
0	Normal
1	Relay-off completed
2	During warning indication

13: MASK indication	
0	MASK-OFF
1	MASK-ON

1: Notification of mode shifting to Standby	
0	Entering Standby mode failed
1	Entering Standby mode succeeded

2: Adjustment of the main unit	
0	Adjustment completed
1	Adjustment not completed

3: Adjustment-data backup	
0	With backup data
1	No data (default)

4, 5: PD data	
0	No PD data
1	Not used
2	POWER
3	SCAN

E	Not used
F	UNKNOWN

9.3.3 ACQUISITION OF OTHER DATA ON THE PANEL ••• [QIP]

The command QIP is for acquiring data on operational information of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QIP]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+58(DATA)+2(CS)= 63 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QIP
1	SERIAL	15 byte	-----
2	HOUR METER	8 byte	00000000
3	TOTAL HOUR METER	8 byte	00000000
4	PON COUNTER	8 byte	00000000
5	TEMP1 acquisition (Temperature value)	5 byte	+23.5 (*1)
6	TEMP0 acquisition (Temperature value)	5 byte	+28.7 (*1)
7	MAX-TEMP1 acquisition (Temperature value)	5 byte	+78.3 (*1)
8	Reserved	4 byte	****
CS		2 byte	94

Note
(*1) : Centigrade scale

9.3.4 ACQUISITION OF PANEL ADJUSTMENT DATA (COMMON DATA) ••• [QAJ]

The command QAJ is for acquiring the panel's factory-preset data.

Command Format	Effective Operation Modes	Function	Remarks
[QAJ]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+41(DATA)+2(CS)= 46 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QAJ
1	V-SUS adjustment value	3 byte	128
2	V-OFT adjustment value	3 byte	128
3	V-RST-P adjustment value	3 byte	128
4	Reserved	3 byte	***
5	XSB adjustment value	3 byte	128
6	YSB adjustment value	3 byte	128
7	YTG adjustment value	3 byte	128
8	YTW adjustment value	3 byte	128
9	RSW adjustment value	3 byte	128
10	YTB adjustment value	3 byte	128
11	RYW adjustment value	3 byte	128
12	R-REVICE setting value	1 byte	0
13	G-REVICE setting value	1 byte	0
14	B-REVICE setting value	1 byte	0
CS		2 byte	B7

• For each REVISE setting value, the level set for RRL, RGL, or RBL is transmitted as one character.

9.3.5 ACQUISITION OF ABL/WB ADJUSTMENT DATA ••• [QPW]

The command QPW is for acquiring the factory-preset data about the video of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QPW]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+35(DATA)+2(CS)= 40 Byte

Data Arrangement	Data Length	Output Example	1: Drive sequence	12, 15: Setting for Items 12 and 15
ECO	3 byte	QPW	48V Video 48 Hz	0 OFF
1 Drive sequence	3 byte	60V	50V Video 50 Hz	1 ON
2 Standard/nonstandard	1 byte	S	60V Video 60 Hz	
3 Type of ABL/WB tables	2 byte	T2	72V Video 72 Hz	13: Peripheral luminance correction
4 ABL adjustment value	3 byte	128	75V Video 75 Hz	0 OFF
5 R-HIGH adjustment value	3 byte	256	60P PC 60 Hz	2 ON (interlocked with APL)
6 G-HIGH adjustment value	3 byte	256	70P PC 70 Hz	
7 B-HIGH adjustment value	3 byte	256		16: Transition of brightness by protective operations
8 R-LOW adjustment value	3 byte	512		0 Upper limit state for brightness
9 G-LOW adjustment value	3 byte	512	2: Standard/nonstandard	1 Brightness being reduced
10 B-LOW adjustment value	3 byte	512	S Standard	2 Lower limit state for brightness
11 Gamma setting	1 byte	A	N Nonstandard	3 Brightness being increased
12 Streaking correction	1 byte	1		
13 Peripheral luminance correction	1 byte	0	3: Type of ABL/WB tables	
14 Reserved	1 byte	*	Tn n: 1 to 4	
15 WB interlocked with APL	1 byte	0		
16 Transition of protective operations	1 byte	0	11: Gamma setting	
17 Reserved	2 byte	**	n 0 to F	
CS	2 byte	37		

9.3.6 ACQUISITION OF PULSE METER VALUE ••• [QPM]

The command QPM is for acquiring the accumulated number of pulses of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QPM]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO)+40(DATA)+2(CS)= 45 Byte

Data Arrangement	Data Length	Output Example
ECO	3 byte	QPM
1 Pulse meter B 1	8 byte	00000000
2 Pulse meter B 2	8 byte	00000000
3 Pulse meter B 3	8 byte	00000000
4 Pulse meter B 4	8 byte	00000000
5 Pulse meter B 5	8 byte	00000000
CS	2 byte	E7

9.3.7 ACQUISITION OF PD LOGS ••• [QPD]

The command QPD is for acquiring data from the 8 latest power-down (PD) logs.

Command Format	Effective Operation Modes	Function	Remarks
[QPD]	All operations	To acquire data on the power-down logs	Return data: 3 (ECO)+80(DATA)+2(CS)= 85 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QPD
1	Latest "1st PD" data	1 byte	A
2	Latest "2nd PD" data	1 byte	2
3	Data from the hour meter for the latest PD	8 byte	00010020
4	Second latest "1st PD" data	1 byte	E
5	Second latest "2nd PD" data	1 byte	9
6	Data from the hour meter for the second latest PD	8 byte	00008523
7	Third latest "1st PD" data	1 byte	4
8	Third latest "2nd PD" data	1 byte	3
9	Data from the hour meter for the third latest PD	8 byte	00004335
10	Fourth latest "1st PD" data	1 byte	2
11	Fourth latest "2nd PD" data	1 byte	0
12	Data from the hour meter for the fourth latest PD	8 byte	00000945
13	Fifth latest "1st PD" data	1 byte	4
14	Fifth latest "2nd PD" data	1 byte	0
15	Data from the hour meter for the fifth latest PD	8 byte	00000715
16	Sixth latest "1st PD" data	1 byte	A
17	Sixth latest "2nd PD" data	1 byte	2
18	Data from the hour meter for the sixth latest PD	8 byte	00000552
19	Seventh latest "1st PD" data	1 byte	A
20	Seventh latest "2nd PD" data	1 byte	0
21	Data from the hour meter for the seventh latest PD	8 byte	00000213
22	Eighth latest "1st PD" data	1 byte	D
23	Eighth latest "2nd PD" data	1 byte	0
24	Data from the hour meter for the eighth latest PD	8 byte	000001A7
CS		2 byte	27

1, 2, 4, 5: PD data	
0	No PD
1	Not used
2	P-POWER
3	SCAN
4	SCN-5V
5	Y-DRIVE
6	Y-DCDC
7	Y-SUS
8	Address
9	X-DRIVE
A	X-DCDC

9.3.8 ACQUISITION OF SD LOGS ••• [QSD]

The command QSD is for acquiring the data from the 8 latest shutdown (SD) logs.

Command Format	Effective Operation Modes	Function	Remarks
[QSD]	All operations	To acquire data on the shutdown logs	Return data: 3 (ECO)+80(DATA)+2(CS)= 85 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QSD
1	Latest SD data	1 byte	1
2	Latest SD subcategory data	1 byte	0
3	Data from the hour meter for the latest SD	8 byte	00752013
4	Second latest SD data	1 byte	5
5	Second latest SD subcategory data	1 byte	0
6	Data from the hour meter for the second latest SD	8 byte	00495204
7	Third latest SD data	1 byte	2
8	Third latest SD subcategory data	1 byte	3
9	Data from the hour meter for the third latest SD	8 byte	00100355
10	Fourth latest SD data	1 byte	2
11	Fourth latest SD subcategory data	1 byte	5
12	Data from the hour meter for the fourth latest SD	8 byte	00075620
13	Fifth latest SD data	1 byte	1
14	Fifth latest SD subcategory data	1 byte	0
15	Data from the hour meter for the fifth latest SD	8 byte	00000852
16	Sixth latest SD data	1 byte	2
17	Sixth latest SD subcategory data	1 byte	5
18	Data from the hour meter for the sixth latest SD	8 byte	000000451
19	Seventh latest SD data	1 byte	0
20	Seventh latest SD subcategory data	1 byte	0
21	Data from the hour meter for the seventh latest SD	8 byte	00000000
22	Eighth latest SD data	1 byte	0
23	Eighth latest SD subcategory data	1 byte	0
24	Data from the hour meter for the eighth latest SD	8 byte	00000000
CS		2 Byte	7D

9.3.9 QS6

Induce it peculiar, individual information is acquired.

Command Format	Effective Operation Modes	Function	Remarks
[QS6]	Every time	Output of status	

Order	Part	Data Arrangement	Data Length	Remarks
00	–	Received Command name	3 byte	QS6
01		DTB version	4 byte	
02		Reserved	8 byte	
03		TELE-TEXT version	60 byte	
04		USER PASSWORD	4 byte	
05	–	Check Sum	2 byte	

9.3.10 QMT

Temperature information (TEMP2) / FAN rotation state information on the MTB side is returned.

Command Format	Effective Operation Modes	Function	Remarks
[QMT]	Every time	Output of status	MTB-side's temperature/FAN rotating status

Order	Part	Data Arrangement	Data Length	Remarks
0	–	Received Command name	3 byte	QMT
01	MTB	MTB-side Temperature (TEMP2)	3 byte	
02		MTB-side FAN rotating speed	1 byte	0: STOP 1: LOW, 5: HIGH, 3: MIDDLE (FHD only)

9.3.11 QNG

MTB/MB side's shutdown information is acquired.

Command Format	Effective Operation Modes	Function	Remarks
[QNG]	Every time	Output of status	

Order	Part	Data Arrangement	Data Length	Remarks
00	—	Received Command name	3 byte	QNG
01	MTB	1st latest NG No.	1 byte	
02		Subcategory No. for the 1st latest NG.	1 byte	
03		MTB hour meter for the 1st latest NG.	7 byte	
04		Temperature for the 1st latest NG.	3 byte

Value	Shutdown Factor	Remarks (Operation)
1	DCDC Converter heden	M-DCDC (immediately Power Supply OFF)
2	Relay Power supply heden	RELAY (immediately Power Supply OFF)

9.3.12 DRV

Drive ON/OFF: ON/OFF control for only the large-power system

Command Format	Effective Operation Modes	Function	Remarks
[DRV+S00]	Every time	DRIVE OFF	At standby mode, when 10 seconds passed after issuing [DRV+S00], command becomes invalid.
[DRV+S01]	Every time	DRIVE ON	

9.3.13 OTHER COMMANDS

• SETTING FOR FACTORY MODE PERMISSION / PROHIBITION ○ ○ ○ [FAY / FAN]

A The commands FAY/FAN are for prohibiting/permitting panel-adjustment commands.

Command Format	Operation		Remarks
	Effective Operation Modes	Control	
[FAY]	Normal operation mode while the power is on	Adjust command is valid.	Mask indications will be forcibly turned off.
[FAN]	During FAY	Adjust command is invalid.	

B

• BACKUP FUNCTION FOR ADJUSTMENT VALUE FOR THE MAIN UNIT ○ ○ ○ [FAJ / UAJ / CBU / BCP]

When the DIGITAL Assy is to be replaced, adjustment values can be copied from the backup EEPROM to the EEPROM of the Assy for service.

C

Command Format	Operation			Remarks
	Effective Operation Modes	Control		
[FAJ]	During FAY	To make the flag setting that indicating that adjustment of the panel unit has been completed	Writing 00 to the 4 k byte ROM and copying to the 2 k byte ROM	This takes at least 350 ms.
[UAJ]		To make the flag setting that indicating that adjustment of the main unit has not been completed	Writing F0 to the 4 k byte ROM	
[CBU]		To make the flag setting that indicating that backup data have not been copied	Writing F0 to the 2 k byte ROM	The backup ROM is initialized.
[BCP]		To copy Digital backup data to EEPROM	Copying backup data

F

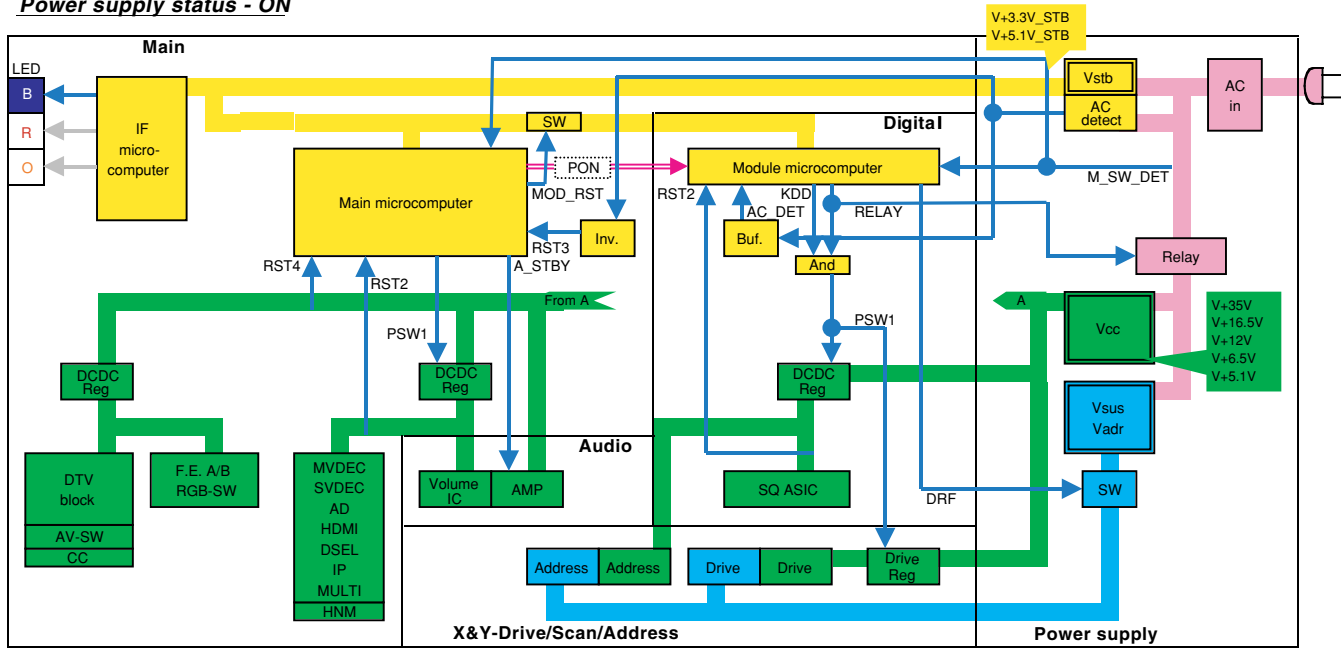

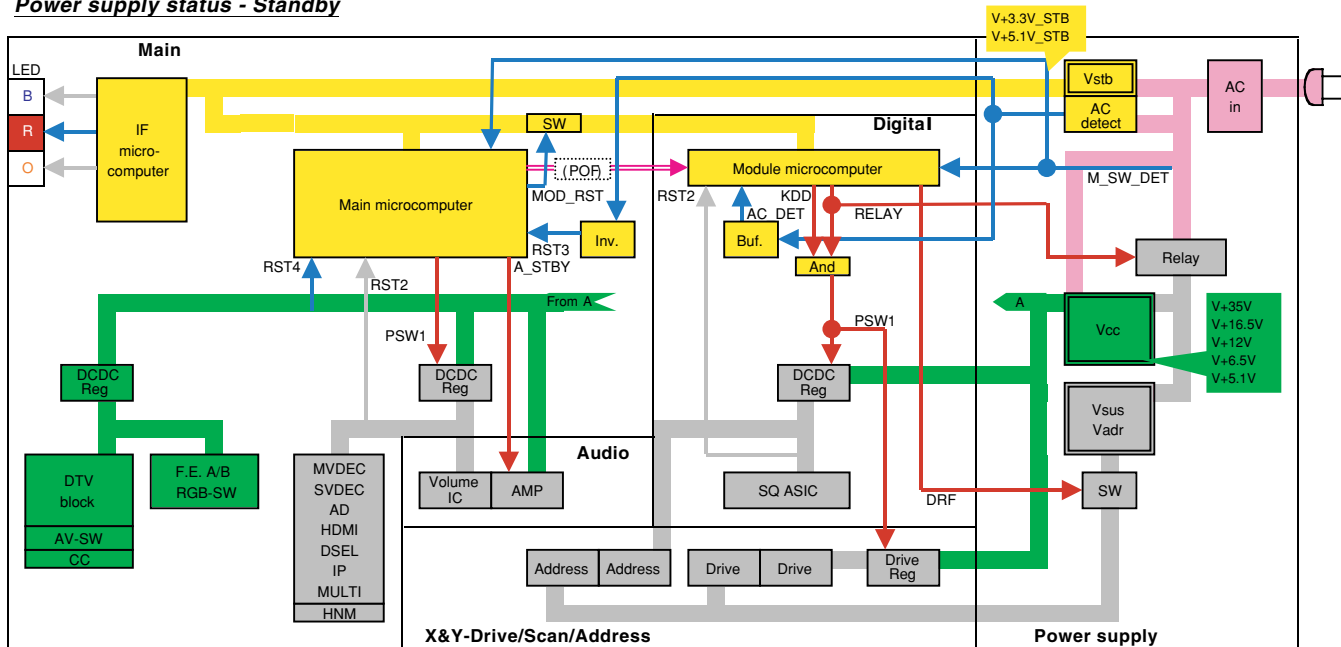

10. GENERAL INFORMATION

10.1 POWER ON SEQUENCE

- ① : The remote control (or KEY) signal is input to the IF microcomputer.
- ② : The IF microcomputer sends the operation data to the main microcomputer.
- ③ : The main microcomputer issues a startup command to the MOD microcomputer.
- ④ : The MOD microcomputer controls the relay of the power MOD of the PDP to startup the power of the PDP.

A

Power supply status - ON**Power supply status - Standby**

F

This state of the power supply is the same as the Standby mode. However, all LED is turned off, and the operation by the user is not effective.

E

10.2 POWER SUPPLY TRANSITION STATUS

10.3 POWER ON/OFF FUNCTION FOR THE LARGE-SIGNAL SYSTEM

Function:

It is an operational mode where the digital signal processing performs circuit operation but the power is not supplied to the panel driving system (large signal system) in order to avoid a power down.

Application:

1. When it is necessary to check whether the signal output is correctly reaching the drive system in a repairing activity etc.
2. In the case of a PD, to determine whether the problem is with the large signal system power supply or with the small signal system power supply.

Method:

1. Make shorting between the specified location (refer to the illustration below) of the PCB surface of the DIGITAL ASSY and the nearby pattern.
2. Execute [DRV S00] by RS232C command. ([DRV S01] for release)

Supplemental explanation:

- When the large signal system power supply is in OFF state, there will be no PD, except PS_PD, as the PD signal has been muted.
- If the clip is removed in the OFF state of the large signal system power supply, PD will take place at the instance of clip removal. Therefore, be sure to remove the clip after turning the power OFF.
- Under RS-232C command control, [DRVS01] (release) is possible during power ON. However, there is a possibility of damaging the set. Therefore, make this operation only after turning the power OFF.
- Command [DRVS00/S01] is effective even during standby. When the main power is turned OFF, however, [DRVS01] (release) will be effective.

10.5 SPECIFICATION ABOUT THE THERMAL PROTECTION

* The change of HI / LO have hysteresis curve below.

■ Reading Value of the Sensor and FAN Drive

Assign			AD Value 10 bit	Aims (Sensor Position)	Aims (Outside Air)
Pin 76	TEMP2	T4 setting	440	55 °C	55 °C
		T3 setting	568	40 °C	40 °C
		T2 setting	592	37 °C	37 °C
		T1 setting	627	33 °C	33 °C
		T0 setting	653	30 °C	30 °C

Assign	FAN: HIGH	FAN: LO	STOP
Pin 149 (FAN_CONT)	H	H	L
Pin 17 (FAN_CONT_POW)	H	L	—

■ Unit State and Fan Drive

POWER	PSW1	State	Control	FAN Operation
ON	ON	ON	According to the reading value of above table sensor.	HIGH or LO
ON	ON	DT_REC	According to the reading value of above table sensor.	HIGH or LO
OFF	—	STB	FAN_CONT: "L"	OFF

[System block diagram]

■ Operation when executing FAN control command

When executing [FCNS00], [FCNS01], [FCNS02] command, detect the FAN_NG signal. When NG is detected, it becomes shutdown. When [FCNS03] command is executed, FAN_NG detection is not operated.

		Tuner	VHF/UHF	VHF Band III (170 MHz to 230 MHz) and UHF Band IV, V (470 MHz to 862 MHz)	
			Auto Channel Preset		999 ch, Auto Preset, Auto Label, Auto Sort
		STEREO		MPEG layer I/II, Dolby Digital	
E	Terminals	Rear	INPUT 1	SCART (AV in, RGB in, TV out)	
			INPUT 2	SCART (AV in/out, S-VIDEO in, AV link *1), Component Video in	
			INPUT 3	SCART (AV in/out, S-VIDEO in, RGB in, AV link *1), HDMI in *2	
			INPUT 4	HDMI in *2 (PDP-427XD, PDP-427XA only)	
			CONTROL OUT	1 (PDP-427XD, PDP-427XA only)	
			Antenna	75 Ω Din Type for VHF/UHF in (Analogue)	
				75 Ω Din Type for VHF/UHF in (Digital)	
				75 Ω Din Type for VHF/UHF out (Digital)	
		Side	PC	Analogue RGB in PC INPUT (AUDIO) (PDP-427XD, PDP-427XA only)	
			Side	INPUT 4	S-VIDEO, AV in (PDP-4270XD, PDP-4270XA only)
			Side	INPUT 5	S-VIDEO, AV in (PDP-427XD, PDP-427XA only)
			AUDIO OUTPUT terminal		(Rear) AUDIO out (Fixed)
			SUB WOOFER OUTPUT terminal		(Rear) Variable (PDP-427XD, PDP-427XA only)
PHONES OUTPUT terminal		(Side) 16 Ω to 32 Ω recommended			
DIGITAL OUT terminal		(Rear) Digital audio output (Optical)			
COMMON INTERFACE		(Rear) CA module			

*1 Switchable from menu.

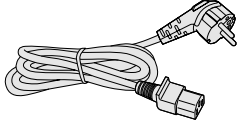

*2 This conforms to HDMI1.1 and HDCP1.1. HDMI (High Definition Multimedia Interface) is a digital interface that handles both video and audio using a single cable. HDCP (High-bandwidth Digital Content Protection) is a technology used to protect copyrighted digital contents that use the Digital Visual Interface (DVI).

Design and specifications are subject to change without notice.

• Remote control unit (PDP-4270XD)

Point the remote control at the plasma television to operate.

- 1 Turns on the power to the plasma television or places it into the standby mode.
- 2 **INPUT**
Selects an input source of the plasma television. (INPUT 1, INPUT 2, INPUT 3, INPUT 4)
- 3 **0 - 9**
TV/External input mode: Selects a channel.
TELETEXT mode: Selects a page.
- 4 TV/External input mode: Displays the channel information.
DTV input mode: Displays the banner information.

- 5 **P+/P-**
TV/External input mode: Selects a channel.

TELETEXT mode: Selects a page.

- 6 **I-II**
Sets the sound multiplex mode.

- 7 **RETURN**
Restores the previous menu screen.

- 8
Selects a desired item on the setting screen.
ENTER
Executes a command.

- 9 **EXIT**
Returns to the normal screen in one step.

- 10 **Colour (RED/GREEN/YELLOW/BLUE)**
TELETEXT mode: Selects a page.

- 11 TV/External input mode: Jumps to the Teletext subtitle page.
DTV input mode: Turns subtitle on and off.

- 12 Displays hidden characters.

- 13 **TV/DTV**
Switches between the TV and DTV input modes.

- 14 TV/External input mode: Selects the screen size.
 TELETEXT mode: Switches Teletext images. (full/upper half/lower half)

- 15 TV/External input mode: Freezes a frame from a moving image. Press again to cancel the function.
 TELETEXT mode: Stops updating Teletext pages. Press again to release the hold mode.

- 16 Sets the volume.

- 17 Mutes the sound.

- 18 **HOME MENU**
TV/External Input mode: Displays the Menu screen.

- 19 **EPG**
Displays the Electronic Programme Guide.

- 20 Selects the TELETEXT mode (all TV image, all TEXT image, TV/TEXT image).

- 21 TELETEXT mode: Displays an Index page for the CEEFAX/FLOF format. Displays a TOP Over View page for the TOP format.

A

• Remote control unit (PDP-427XD)

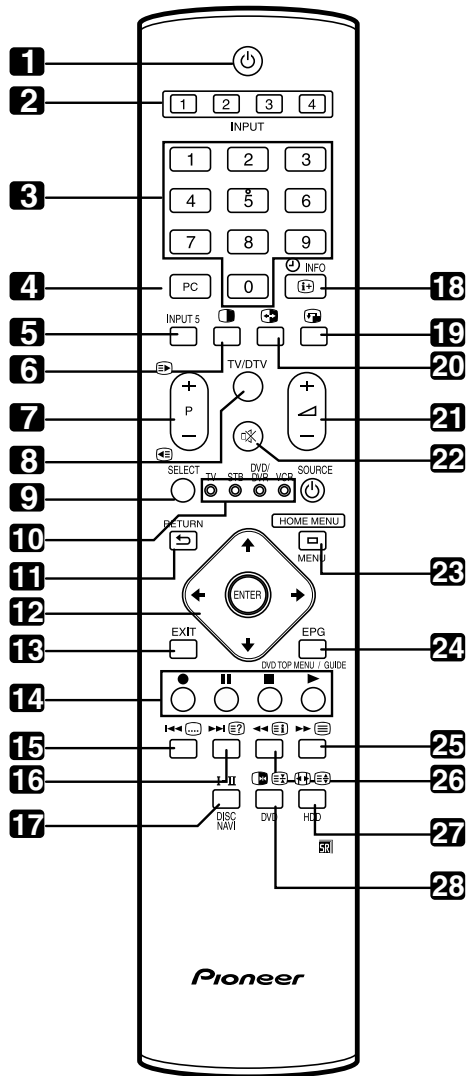

This section describes the functions of the buttons available when the TV mode has been selected using the **SELECT** button.

For the buttons for controlling other equipment, see "Controlling other equipment using the supplied remote control unit".

B

C

D

E

F

- 1 Turns on the power to the Plasma Television or places it into the standby mode.
- 2 **INPUT**
Selects an input source of the Plasma Television. (INPUT 1, INPUT 2, INPUT 3, INPUT 4)
- 3 **0 - 9**
TV/External input mode: Selects a channel.
TELETEXT mode: Selects a page.
- 4 **PC**
Selects the PC terminal as an input source.
- 5 **INPUT 5**
Selects INPUT 5 as the input source of the Plasma Television.
- 6 Switches the screen mode among 2-screen, picture-in-picture, and single-screen.
- 7 **P +/-P -**
TV/External input mode: Selects a channel.

TELETEXT mode: Selects a page.

8 **TV/DTV**

Switches between the TV and DTV input modes.

9 **SELECT**

Switches the selection among TV, STB, DVD/DVR, and VCR, so that you can control other equipment in connection, using the supplied remote control unit.

10 **TV, STB, DVD/DVR, VCR**

These indicators show the current selection and status when you control other equipment in connection using the supplied remote control unit.

11 **RETURN**

Restores the previous menu screen.

12

Selects a desired item on the setting screen.

ENTER

Executes a command.

13 **EXIT**

Returns to the normal screen in one step.

14 **Colour (RED/GREEN/YELLOW/BLUE)**

TELETEXT mode: Selects a page.

15

TV/External input mode: Jumps to the Teletext subtitle page.
DTV input mode: Turns subtitle on and off.

16

TELETEXT mode: Displays hidden characters.

17 **I-II**

Sets the sound multiplex mode.

18 **INFO**

TV/External input mode: Displays the channel information.
DTV input mode: Displays the banner information.

19

Moves the location of the small screen when in the picture-in-picture mode.

20

Switches between the two screens when in the 2-screen or picture-in-picture mode.

21

Sets the volume.

22

Mutes the sound.

23 **HOME MENU**

TV/External Input mode: Displays the Menu screen.

24 **EPG**

Display the Electronic Programme Guide.

25

Selects the TELETEXT mode. (all TV image, all TEXT image, TV/TEXT image)

26

TELETEXT mode: Displays an Index page for the CEEFAX/FLOF format. Displays a TOP Over View page for the TOP format.

27

TV/External input mode: Selects the screen size.

TELETEXT mode: Switches Teletext images. (full/upper half/lower half)

28

TV/External input mode: Freezes a frame from a moving image. Press again to cancel the function.

TELETEXT mode: Stops updating Teletext pages. Press again to release the hold mode.

NOTE

• When using the remote control unit, point it at the Plasma Television.

11.3.2 PDP-427XA, PDP-4270XA

• Front / Rear (PDP-427XA)

Front view (PDP-427XA)

- 1 POWER button
- 2 POWER ON indicator
- 3 STANDBY indicator
- 4 SLEEP indicator
- 5 Remote control sensor

- (Side view)
- 6 STANDBY/ON button
 - 7 INPUT button
 - 8 VOLUME +/- buttons
 - 9 CHANNEL +/- buttons

- 10 PHONES output terminal
- 11 INPUT 5 terminal (S-VIDEO)
- 12 INPUT 5 terminal (VIDEO)
- 13 INPUT 5 terminals (AUDIO)

Rear view (PDP-427XA)

- 1 PC INPUT terminal (ANALOG RGB)
- 2 AC IN terminal
- 3 INPUT 3/INPUT 4 terminals (HDMI)
- 4 RS-232C terminal (used for factory setup)
- 5 ANT (Antenna) input terminal
- 6 INPUT 1 terminal (SCART)
- 7 INPUT 2 terminal (SCART)

- 8 INPUT 3 terminal (SCART)
- 9 INPUT 2 terminal (COMPONENT VIDEO: Y, Pb, Pr)
- 10 SUB WOOFER OUTPUT terminal
- 11 AUDIO OUTPUT terminals
- 12 PC INPUT terminal (AUDIO)
- 13 CONTROL OUT terminal

• PDP-427XA (Remote control unit)

Remote control unit

This section describes the functions of the buttons available when the TV mode has been selected using the **SELECT** button. For the buttons for controlling other equipment, see "Controlling other equipment using the supplied remote control unit" starting.

- 1 Turns on the power to the Plasma Television or places it into the standby mode.
- 2 **INPUT**
Selects an input source of the Plasma Television. (INPUT 1, INPUT 2, INPUT 3, INPUT 4)
- 3 **0 - 9**
TV/External input mode: Selects a channel.
TELETEXT mode: Selects a page.
- 4 **PC**
Selects the PC terminal as an input source.
- 5 **INPUT 5**
Selects INPUT 5 as the input source of the Plasma Television.
- 6 Switches the screen mode among 2-screen, picture-in-picture, and single-screen.
- 7 **P+/P-**
TV/External input mode: Selects a channel.
 TELETEXT mode: Selects a page.

8 **SELECT**

Switches the selection among TV, STB, DVD/DVR, and VCR, so that you can control other equipment in connection, using the supplied remote control unit.

9 **TV, STB, DVD/DVR, VCR**

These indicators show the current selection and status when you control other equipment in connection using the supplied remote control unit.

10 **RETURN**

Restores the previous menu screen.

11

Selects a desired item on the setting screen.

ENTER

Executes a command.

12 **EXIT**

Returns to the normal screen in one step.

13 **Colour (RED/GREEN/YELLOW/BLUE)**

TELETEXT mode: Selects a page.

14

TV/External input mode: Jumps to the Teletext subtitle page.

15

TELETEXT mode: Displays hidden characters.

16 **I-II**

Sets the sound multiplex mode.

17 **INFO**

TV/External input mode: Displays the channel information.

18

Moves the location of the small screen when in the picture-in-picture mode.

19

Switches between the two screens when in the 2-screen or picture-in-picture mode.

20

Sets the volume.

21

Mutes the sound.

22 **HOME MENU**

TV/External Input mode: Displays the Menu screen.

23

Selects the TELETEXT mode.
(all TV image, all TEXT image, TV/TEXT image)

24

TELETEXT mode: Displays an Index page for the CEEFAX/FLOF format. Displays a TOP Over View page for the TOP format.

25

TV/External input mode: Selects the screen size.

TELETEXT mode: Switches Teletext images. (full/upper half/lower half)

26

TV/External input mode: Freezes a frame from a moving image. Press again to cancel the function.

TELETEXT mode: Stops updating Teletext pages. Press again to release the hold mode.

NOTE

When using the remote control unit, point it at the Plasma Television.

• Front (PDP-4270XA)

Plasma television (front)

- 1 **POWER** button
- 2 POWER ON indicator
- 3 STANDBY indicator
- 4 SLEEP indicator

Pin Arrangement (Top view)

● Pin Function

2.1 Power supply/ground terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
AVDD1	138	—	—	—	Analog 1.5V power supply Connect to the 1.5V power supply. Separate it from the other terminals via a filter.
AVDD3	141	—	—	—	Analog 3.3V power supply Connect to the 3.3V power supply. Separate it from the other terminals via a filter.
	155,156,167,168	—	—	—	Analog 3.3V power supply for ADC. Connect to the 3.3V power supply. Separate it from the other power lines via a filter.
AVDDA	61,64,67	—	—	—	Analog 3.3V power supply for DAC. Connect to the 3.3V power supply. Separate it from the other power lines via a filter.
AGND	143,144,145,175,176	—	—	—	Analog ground
AGNDA	58,63,66,69	—	—	—	Analog ground (for DAC)
DVDD1	16,23,27,32,39,48, 57,70,76,81,92,103, 115,125,133	—	—	—	Digital 1.5V power supply Connect to the 1.5V power supply.
DVDD3	1,11,26,44,53,88,98, 109,120,132	—	—	—	Digital 3.3V power supply Connect to the 3.3V power supply.
DGND	17,24,33,38,45,56, 80,89,93,104,114, 126	—	—	—	Digital ground

2.2 System reset terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
RSTB	74	I	Schmitt	—	System reset input (Active-Low)

A

● Pin Function

2.3 I2C bus interface terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
RGRED	75	O	LVTTL N-ch open drain	6 mA	I ² C register lead flag output (Active-Low)
SCL	71	I	LVTTL	Fail-safe	I ² C bus clock input Connect to the SCL line of the system.
SDA	72	I/O	LVTTL N-ch open drain	Fail-safe 6 mA	I ² C bus data input/output Connect to the SDA line of the system.
SLA0	73	I	LVTTL	—	I ² C bus slave address selection input (L : B8h/B9h, H : BAh/BBh) Connect to GND when set to low level and to DVDD3 (3.3V) when set to high level.

C

2.4 Terminal for test

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
SCKSET	2	I	LVTTL	—	Test mode selection (L: normal, H: test mode)
TEST	3	I	LVTTL	—	Test setting (L: normal, H: test mode)
FCKM	77	I	LVTTL	—	FCLK8 test mode selection (L: normal, H: test mode)
BCKM	111	I	LVTTL	—	Test mode selection of BCLK8 terminal. (L: normal, H: test mode)
ATS1	139	I	Analog	—	Analog test input Connect to GND normally.
ATS2	140	I	Analog	—	Analog test input Connect to GND normally.
ATS3	142	I	Analog	—	Analog test input Connect to GND normally.
VLPF1	149	O	Analog	—	Analog test output Connect to GND via a 0.1μF capacitor.
VLPF2	171	O	Analog	—	Analog test output Connect to GND via a 0.1μF capacitor.

E

Caution: Connect these terminals for test to GND unless otherwise instructed.

F

● Pin Function

2.5 Clock generator terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
XI	55	I	Analog	—	Reference clock input Connect 24.576MHz crystal oscillator.
XO	54	O	Analog	—	Reference clock output Connect 24.576MHz crystal oscillator.
BCLK8	102	I/O	LVTTL 3-state	6 mA	Subsequent stage line lock clock monitor input/output It will become Hi-Z when BCK8OUT (SA1Fh, D5)=0. Normally, set to BCK8OUT=0 and leave it open.

2.6 Terminal for μPD64031A and μPD64032 digital connection

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
FCLK8	78	I/O	LVTTL 3-state	6 mA	Front stage burst lock clock input/output It will become Hi-Z when FCK8S[2:0] (SA21h, D6-D4)=000b. Normally, set to FCK8S[2:0]=0 and leave it open.
FCKQ	127	I/O	LVTTL 3-state	3 mA	Sampling clock output for μPD64031A and μPD64032 digital connection. It will become Hi-Z when FCKQS[2:0] (SA21h, D2-D0)=000b. Normally, set to FCKQS[2:0]=0 and leave it open.
FOCP	128	I/O	LVTTL 3-state	3 mA	Clamp pulse output for μPD64031A and μPD64032 digital connection/timing output (VD) for digital RGB input. It will become Hi-Z when FOCPS[2:0] (SA23h, D2-D0)=000b. Normally, set to FOCPS[2:0]=0 and leave it open.

2.7 Terminal for RGB input

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
DFBI	130	I	LVTTL	—	Fast Blanking signal input for analog RGB input.
DYSI	131	I	LVTTL	—	YS signal input for digital RGB input.
DYMI	134	I	LVTTL	—	YM signal input for digital RGB input.
DCGI	135	I	LVTTL	—	Digital RGB/G signal input
DCBI	136	I	LVTTL	—	Digital RGB/B signal input
DCRI	137	I	LVTTL	—	Digital RGB/R signal input
FCSI	129	I/O	LVTTL 3-state	3 mA	Sync separation signal input/timing output (HD) for RGB input. It will become Hi-Z when FCSIS[2:0] (SA22h, D2-D0)=000b. Normally, set to FCSIS[2:0]=0 and leave it open.

2.8 ADC1 section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
AVI	148	I	Analog	—	ADC1 composite/Y signal input Input the image signal by cutting the capacity.
ASYI	150	I	Analog	—	ADC1 composite/Y signal input Input the image signal by cutting the capacity.
ACYI	152	I	Analog	—	ADC1 composite/Y signal input Input the image signal by cutting the capacity.
ACSI	154	I	Analog	—	ADC1 composite/Y signal input Input the image signal by cutting the capacity.
VCLY	146	O	Analog	—	ADC1 clamp electric potential Connect to GND via 0.1μF and 10μF capacitors.
VCOM1	147	I	Analog	—	ADC1 in-phase reference voltage Connect to GND via a 0.1μF capacitor.
VRB1	151	I	Analog	—	ADC1 bottom reference voltage Connect to GND via a 0.1μF capacitor.
VRT1	153	I	Analog	—	ADC1 top reference voltage Connect to GND via a 0.1μF capacitor.

2.9 ADC2 section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
ASCI	158	I	Analog	—	ADC2 separate C signal input Input the image signal by cutting the capacity.
AGI	160	I	Analog	—	ADC2 RGB component G signal input Input the image signal by cutting the capacity.
VRT2	157	I	Analog	—	ADC2 top reference voltage Connect to GND via a 0.1μF capacitor.
VRB2	159	I	Analog	—	ADC2 bottom reference voltage Connect to GND via a 0.1μF capacitor.
VCOM2	161	I	Analog	—	ADC2 in-phase reference voltage Connect to GND via a 0.1μF capacitor.

2.10 ACD3 section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
ACBI	162	I	Analog	—	ADC3 color difference component Cb signal input Input the image signal by cutting the capacity.
ABI	164	I	Analog	—	ADC3 RGB component B signal input Input the image signal by cutting the capacity.
VRT3	163	I	Analog	—	ADC3 top reference voltage Connect to GND via a 0.1μF capacitor.
VRB3	165	I	Analog	—	ADC3 bottom reference voltage Connect to GND via a 0.1μF capacitor.
VCOM3	166	I	Analog	—	ADC3 in-phase reference voltage Connect to GND via a 0.1μF capacitor.

2.9 ACD4 section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
ACRI	170	I	Analog	—	ADC4 color difference component Cr signal input Input the image signal by cutting the capacity.
ARI	172	I	Analog	—	ADC3 RGB component R signal input Input the image signal by cutting the capacity.
VCOM4	169	I	Analog	—	ADC4 in-phase reference voltage Connect to GND via a 0.1μF capacitor.
VRB4	173	I	Analog	—	ADC4 bottom reference voltage Connect to GND via a 0.1μF capacitor.
VRT4	174	I	Analog	—	ADC4 top reference voltage Connect to GND via a 0.1μF capacitor.

2.12 DAC section terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
IO-YG	62	O	Analog	—	Color difference component Y/RGB component G output signal. Connect to AGNDA via a 200Ω load resistance.
IO-CR	68	O	Analog	—	Color difference component Cr/RGB component R output signal. Connect to AGNDA via a 200Ω load resistance.
IO-CB	65	O	Analog	—	Color difference component Cb/RGB component B output signal. Connect to AGNDA via a 200Ω load resistance.
REF	59	I	Analog	—	External reference input pin. Supply 1.0V. And, connect to AGNDA via a 0.1μF capacitor.
RSET	60	O	Analog	—	Connect to AGNDA via a 620Ω resistor for external adjustment.

2.13 Digital image input/output terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
FDIO0-FDIO9	112,113,116, 117,118,119, 121,122,123, 124	I/O	LVTTL 3-state	6 mA	Digital 8/10 bit Cb, Cr output/input at the time of μPD64031A digital connection. It will become Hi-Z when FDIOS[2:0] (SA22h, D6-D4)=000b. Leave it open when not in use.
ROCK	101	O	LVTTL 3-state	6 mA	Clock for digital ITU-R BT.656/component output.
ROY0-ROY13	100,99,97,96, 95,94,91,90, 87,86,85,84, 83,82	O	LVTTL 3-state	6 mA	Digital ITU-R BT.656/component output. Digital RGB component (8 bit) output
ROFDIE	79	I	LVTTL	—	Image input/output terminal output enable. The state of ROY[13:0], ROCK, HD, VD, VBLK, FILD and RDEO terminals is controlled. L: Output terminal Hi-Z, H: Output enable Normally, pull up to 3.3V.

2.14 timing output terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
HD	105	O	LVTTL 3-state	3 mA	Horizontal sync signal output
VD	106	O	LVTTL 3-state	3 mA	Vertical sync signal output
VBLK	107	O	LVTTL 3-state	3 mA	V blanking output
FILD	108	O	LVTTL 3-state	3 mA	Field output
RDEO	110	O	LVTTL 3-state	3 mA	Effective pixel range output

● Pin Function

2.15 Memory interface terminal

Acronyms	Terminal number	I/O	Level	Buffer type PU/PD [kΩ]	Functions
SDRABP	4	O	LVTTL 3-state	3 mA	All bank pre-charge output for external memory (Active-High)
SDRCLK	25	O	LVTTL 3-state	9 mA	Clock output for external memory
SDRCKE	21	O	LVTTL 3-state	3 mA	Clock enable output for external memory (Active-High)
SDRCS	20	O	LVTTL 3-state	3 mA	Chip select output for external memory (Active-Low)
SDRCAS	28	O	LVTTL 3-state	3 mA	Column address strobe output for external memory (Active-Low)
SDRRAS	22	O	LVTTL 3-state	3 mA	Low address strobe output for external memory (Active-Low)
SDRWE	29	O	LVTTL 3-state	3 mA	Write enable output for external memory (Active-Low)
SDRA0 -SDRA11	19,18,15,14, 13,12,10,9,8, 7,6,5	O	LVTTL 3-state	3 mA	Address output for external memory Insert a damping resistor of approximately 100Ω, and connect to the SDRAM address terminal.
SDRDQ0 -SDRDQ15	51,49,46,42, 40,36,34,30, 31,35,37,41, 43,47,50,52	I/O	LVTTL 3-state	6 mA	Data input/output for external memory.

	SCL	Serial Port Data Clock (100 kHz Maximum)	3.3 V CMOS	56
	A0	Serial Port Address Input 1	3.3 V CMOS	55

A

● Pin Function

Pin Name	Function
OUTPUTS	
HSOUT	Horizontal Sync Output A reconstructed and phase-aligned version of the Hsync input. Both the polarity and duration of this output can be programmed via serial bus registers. By maintaining alignment with DATAACK and Data, data timing with respect to horizontal sync can always be determined.
VSOUT	Vertical Sync Output A reconstructed and phase-aligned version of the video Vsync. The polarity of this output can be controlled via a serial bus bit. The placement and duration in all modes is set by the graphics transmitter.
SOGOUT	Sync-On-Green Slicer Output This pin outputs either the signal from the Sync-on-Green slicer comparator or an unprocessed but delayed version of the Hsync input. See the Sync Processing Block Diagram to view how this pin is connected. (Note: Besides slicing off SOG, the output from this pin gets no other additional processing on the AD9985. Vsync separation is performed via the sync separator.)
SERIAL PORT (2-Wire)	
SDA	Serial Port Data I/O
SCL	Serial Port Data Clock
A0	Serial Port Address Input 1
For a full description of the 2-wire serial register and how it works, refer to the 2-wire serial control port section.	
DATA OUTPUTS	
RED	Data Output, Red Channel
GREEN	Data Output, Green Channel
BLUE	Data Output, Blue Channel
The main data outputs. Bit 7 is the MSB. The delay from pixel sampling time to output is fixed. When the sampling time is changed by adjusting the PHASE register, the output timing is shifted as well. The DATAACK and HSOUT outputs are also moved, so the timing relationship among the signals is maintained. For exact timing information.	
DATA CLOCK OUTPUT	
DATAACK	Data Output Clock The main clock output signal used to strobe the output data and HSOUT into external logic. It is produced by the internal clock generator and is synchronous with the internal pixel sampling clock. When the sampling time is changed by adjusting the PHASE register, the output timing is shifted as well. The Data, DATAACK, and HSOUT outputs are all moved, so the timing relationship among the signals is maintained.
INPUTS	
R _{AIN}	Analog Input for Red Channel
G _{AIN}	Analog Input for Green Channel
B _{AIN}	Analog Input for Blue Channel
High impedance inputs that accept the Red, Green, and Blue channel graphics signals, respectively. (The three channels are identical, and can be used for any colors, but colors are assigned for convenient reference.) They accommodate input signals ranging from 0.5 V to 1.0 V full scale. Signals should be ac-coupled to these pins to support clamp operation.	
HSYNC	Horizontal Sync Input This input receives a logic signal that establishes the horizontal timing reference and provides the frequency reference for pixel clock generation. The logic sense of this pin is controlled by serial Register 0EH Bit 6 (Hsync Polarity). Only the leading edge of Hsync is active; the trailing edge is ignored. When Hsync Polarity = 0, the falling edge of Hsync is used. When Hsync Polarity = 1, the rising edge is active. The input includes a Schmitt trigger for noise immunity, with a nominal input threshold of 1.5 V.
VSYNC	Vertical Sync Input The input for vertical sync.

F

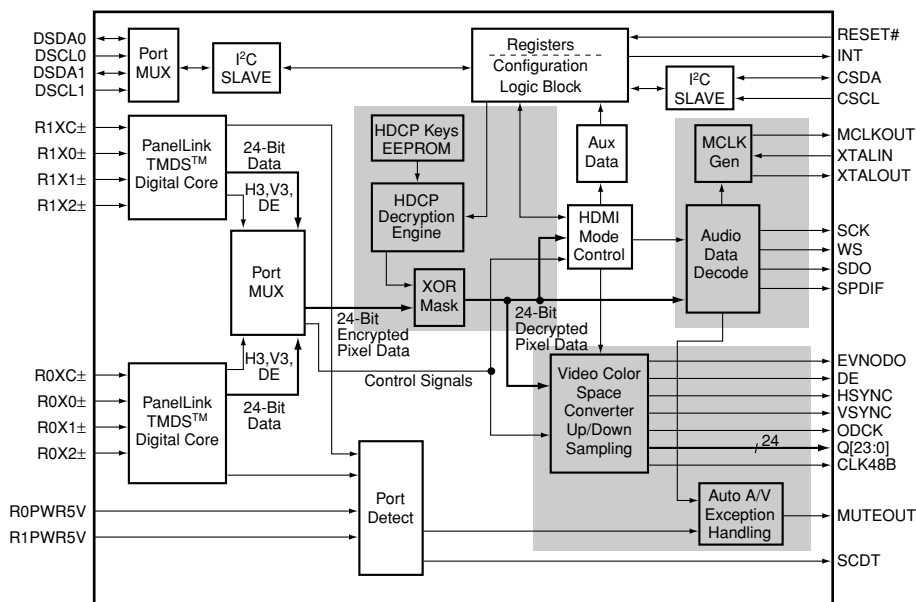

● Pin Function

Pin Name	Function
SOGIN	<p>Sync-on-Green Input</p> <p>This input is provided to assist with processing signals with embedded sync, typically on the Green channel. The pin is connected to a high speed comparator with an internally generated threshold. The threshold level can be programmed in 10 mV steps to any voltage between 10 mV and 330 mV above the negative peak of the input signal. The default voltage threshold is 150 mV. When connected to an ac-coupled graphics signal with embedded sync, it will produce a noninverting digital output on SOGOUT. (This is usually a composite sync signal, containing both vertical and horizontal sync information that must be separated before passing the horizontal sync signal to Hsync.) When not used, this input should be left unconnected. For more details on this function and how it should be configured, refer to the Sync-on-Green section.</p>
CLAMP	<p>External Clamp Input</p> <p>This logic input may be used to define the time during which the input signal is clamped to ground. It should be exercised when the reference dc level is known to be present on the analog input channels, typically during the back porch of the graphics signal. The CLAMP pin is enabled by setting control bit Clamp Function to 1 (Register 0FH, Bit 7, default is 0). When disabled, this pin is ignored and the clamp timing is determined internally by counting a delay and duration from the trailing edge of the Hsync input. The logic sense of this pin is controlled by Clamp Polarity Register 0FH, Bit 6. When not used, this pin must be grounded and Clamp Function programmed to 0.</p>
COAST	<p>Clock Generator Coast Input (Optional)</p> <p>This input may be used to cause the pixel clock generator to stop synchronizing with Hsync and continue producing a clock at its current frequency and phase. This is useful when processing signals from sources that fail to produce horizontal sync pulses during the vertical interval. The COAST signal is generally not required for PC-generated signals. The logic sense of this pin is controlled by Coast Polarity (Register 0FH, Bit 3). When not used, this pin may be grounded and Coast Polarity programmed to 1, or tied HIGH (to V_D through a 10 k resistor) and Coast Polarity programmed to 0. Coast Polarity defaults to 1 at power-up.</p>
REF BYPASS	<p>Internal Reference BYPASS</p> <p>Bypass for the internal 1.25 V band gap reference. It should be connected to ground through a 0.1 μF capacitor. The absolute accuracy of this reference is $\pm 4\%$, and the temperature coefficient is ± 50 ppm, which is adequate for most AD9985 applications. If higher accuracy is required, an external reference may be employed instead.</p>
MIDSCV	<p>Midscale Voltage Reference BYPASS</p> <p>Bypass for the internal midscale voltage reference. It should be connected to ground through a 0.1 μF capacitor. The exact voltage varies with the gain setting of the Blue channel.</p>
FILT	<p>External Filter Connection</p> <p>For proper operation, the pixel clock generator PLL requires an external filter. Connect the filter shown in Figure to this pin. For optimal performance, minimize noise and parasitics on this node.</p>
POWER SUPPLY	
V_D	<p>Main Power Supply</p> <p>These pins supply power to the main elements of the circuit. They should be filtered and as quiet as possible.</p>
V_{DD}	<p>Digital Output Power Supply</p> <p>A large number of output pins (up to 25) switching at high speed (up to 110 MHz) generates a lot of power supply transients (noise). These supply pins are identified separately from the V_D pins so special care can be taken to minimize output noise transferred into the sensitive analog circuitry. If the AD9985 is interfacing with lower voltage logic, V_{DD} may be connected to a lower supply voltage (as low as 2.5 V) for compatibility.</p>
PV_D	<p>Clock Generator Power Supply</p> <p>The most sensitive portion of the AD9985 is the clock generation circuitry. These pins provide power to the clock PLL and help the user design for optimal performance. The designer should provide quiet, noise-free power to these pins.</p>
GND	<p>Ground</p> <p>The ground return for all circuitry on-chip. It is recommended that the AD9985 be assembled on a single solid ground plane, with careful attention given to ground current paths.</p>

4	RUN/SS	I	Run Control and Soft-Start Input.	15	NC	–	Open. No internal connection.
5	SGND	–	Signal Ground.	16	SVIN	I	Signal Input Supply.
6	NC	–	Open. No internal connection.	17	PGOOD	O	Power Good Output.
7	PVIN	–	Power Input Supply	18	ITH	–	Error Amplifier Compensation Point.
8	SW	–	Switch Node Connection to Inductor.	19	VFB	I	Feedback Pin.
9	SW	–	Switch Node Connection to Inductor.	20	PGND	–	Power Ground.
10	PGND	–	Power Ground.	21	Exposed Pad	–	Should be connected to SGND and soldered to the PCB.
11	PGND	–	Power Ground.

● Pin Function

No.	Pin Name	I/O	Pin Function	No.	Pin Name	I/O	Pin Function
1	SVIN	I	Signal Input Supply.	9	PVIN	I	Power Input Supply
2	PGOOD	O	Power Good Output.	10	SW	–	Switch Node Connection to the Inductor.
3	ITH	–	Error Amplifier Compensation Point.	11	SW	–	Switch Node Connection to the Inductor.
4	VFB	I	Feedback Pin.	12	PGND	–	Power Ground
5	RT	I	Oscillator Resistor Input.	13	PGND	–	Power Ground
6	SYNC/MODE	I	Mode Select and External Clock Synchronization Input.	14	SW:	–	Switch Node Connection to the Inductor.
7	RUN/SS	I	Run Control and Soft-Start Input.	15	SW	–	Switch Node Connection to the Inductor.
8	SGND	–	Signal Ground.	16	PVIN	I	Power Input Supply
